CASH INCOME FROM THE SALE OF FARM PRODUCTS JANUARY TO JUNE, 1941 TO 1943

Ottawa, September 11, 1943. - The Dominion Bureau of Statistics issues today estimates of the cash income from the sale of farm products in Canada for the period January to June, 1941 to 1943. Income by months in 1943 from the Prairie Provinces is presented in Tables 5 to 8. These estimates are based on reports of marketings and prices received by farmers for the principal farm products. The estimates are subject to revision as more complete data on production and marketings become available.

SUMMARY

A further increase of 25 per cent in the cash income from the sale of farm products is shown in the estimates for the first 6 months of 1943. Cash income from the sale of farm products in Canada during the first 6 months of 1943 totalled \$538.3 million as compared with \$428.7 million in the corresponding period of 1942 and \$356.8 million in 1941. The increase this year was common to all provinces except Ontario and was most marked in the Prairie Provinces where substantial sales of wheat and other grains were made from the large 1942 crop. The greatest increase this year was in Saskatchewan which was the only province recording a decline in the first 6 months of 1942 as compared with 1941. Increases in farm cash income occurred in all three of the Maritime Provinces, Quebec and British Columbia, although in Nova Scotia the change was of a minor nature.

Income from the sale of wheat increased substantially from the relatively low figure of 1942 but the greatest percentage increase occurred in the receipts from marketings of oats and barley. For Canada as a whole, receipts from the sale of oats amounted to \$27 million in the first half of 1943 as compared with only \$6.3 million of a year previously and over the same period income from the sale of barley increased from \$4.3 million to \$19.6 million. Other substantial increases were recorded in income from the sale of hogs and dairy products. Income from the sale of hogs in the first 6 months of 1943 totalled \$106.2 million and from dairy products \$110.3 million.

The greatest percentage of farm cash income is normally received during the last 6 months of the year when marketings of grain and live stock are at a high level. In 1942 cash income for the entire year was \$1,083.1 million of which almost 40 per cent had been received up to the end of June. The reduced grain crops in the Prairie Provinces this year, combined with difficulties in securing storage space, may reduce the fall marketings of grain, but on the other hand, substantial increases are expected in the marketings of live stock.

Income received by farmers in the form of subsidies and bonus payments are not included in these calculations except in those cases where the payments have been made in the form of higher prices to the producers.

Cash Income from the Sale of Farm Products
January to June, 1941, 1942 and 1943
(thousand dollars)
