## NET INCOME OF FARM OPERATORS FROM FARMING OPERATIONS, 1966(1)

This report presents the regular annual estimate of net income of farm operators from farming operations for the year 1966. As a result of more up-to-date information becoming available in recent weeks, the estimate contained in this report for 1966 differs slightly from that contained in the advance preliminary report published in April. In addition to estimates of farm net income, this report includes detailed information concerning income in kind, and farm operating expenses and depreciation charges for each of the past four years. Commodity detail for farm cash receipts from farming operations is presented in the Bureau report, Farm Cash Receipts, 1966, Catalogue No. 21-001.

Farm Net Income Concepts - Two different estimates of farm net income from farming operations are prepared for inclusion in this report. One is called realized net income and is obtained by adding together farm cash receipts from farming operations, supplementary payments and the value of income in kind, and deducting farm operating expenses and depreciation charges. This estimate of farm net income represents the amount of income from farming that operators have left for family living or investment after provision has been made for operating expenses and depreciation charges. The second estimate is referred to as total net income and is obtained by adjusting realized net income to take into account changes occurring in inventories of livestock and stocks of grains on farms between the beginning and end of the year. This latter estimate is used in calculating the contribution of agriculture to National Income(2) and for making comparisons with net income of non-farm business enterprises.

Realized Farm Net Income - For the year 1966, it is estimated that realized net income of farm operators from farming operations amounted to \$1,786.6 million. This estimate is 17.5 per cent above the 1965 level of \$1,521.0 million, and 11.4 per cent above the previous record of \$1,603.9 million set in 1951. During 1966, record-high farm cash receipts together with increased income in kind and supplementary payments more than offset increased farm operating expenses.

Total Farm Net Income - This estimate of farm income, which takes into account changes in farm inventories of field crops and livestock, amounted to \$1,977.9 million in 1966, 26.4 per cent above the 1965 level of \$1,565.2 million and slightly above the previous record of \$1,931.4 million established in 1951. Although farm cash receipts contributed most to this increase, a substantial contribution was also made by the gain in the value of changes in farm inventories which arose, for the most part, out of record-breaking crop production.

Farm Cash Receipts - Farm cash receipts from farming operations, the most important component of farm income from farming operations, reached an all-time high of \$4,232.2 million in 1966. This is 11.2 per cent above the previous record of \$3,805.5 million for 1965 and 28.4 per cent above the average for the five-year period, 1961-65.

Returns from nearly all of the items contributing to farmers' cash receipts were up in 1966, but the most significant increases were recorded for wheat and cattle. Offsetting these gains to some extent were reduced cash receipts from the sale of potatoes and smaller total Canadian Wheat Board participation payments on previous years' grain crops.

Supplementary Payments - During 1966, farmers received supplementary payments amounting to \$41.3 million as against \$12.8 million in 1965. These payments include those made under the provisions of the Prairie Farm Assistance Act and other government assistance to farmers who suffered losses as a result of adverse weather conditions.

Income in Kind - This item represents the value of consumption of home-grown food-stuffs, wool and woodlot products, plus an imputed rental value of the farm dwellings. The farm products consumed are valued at the price the farmer would have received had they been sold. During 1966, the value of this income component rose to \$469.6 million from \$432.0 million in 1965. This increase was due largely to a higher total imputed rental value of farm homes and, to a lesser extent, to an increase in the value of consumption of meat and poultry products.

<u>Value of Inventory Change</u> - The value of inventory change is obtained by calculating the change in the quantity of field crops and the number of livestock on farms between the beginning and end of the year and valuing the difference at average annual prices. The value of inventory change at the end of 1966

<sup>(1)</sup> Excludes Newfoundland.

<sup>(2)</sup> For a discussion of the methods and concepts used to determine the contribution of agriculture to National Income, see Handbook of Agricultural Statistics, Part II, Catalogue No. 21-511 to be published mid-June 1967.

\$191.2 million as against \$44.3 million a year earlier. The substantial increase between 1965 and 1966 can be attributed almost entirely to the record crop production which took place in 1966 and the consequent build-up of stocks on farms. Although the cattle population in 1966 was below the 1965 level, this was offset by increased numbers of hogs and poultry.

Farm Operating Expenses and Depreciation Charges - This estimate includes farm business costs incurred by farmers regardless of whether they are paid for in cash or accumulated as new debt. As far as possible, they exclude outlays for goods and services obtained directly from other farmers. All subsidy payments are taken into account so that the estimates represent only the net amounts paid by farmers.

During 1966, total operating expenses and depreciation charges reached a new high level of \$2,956.5 million. This is 8.3 per cent above the estimate of \$2,729.3 million for 1965. Nearly all items considered in the estimates of farm operating expenses were higher in 1966 than in 1965. Feed was the item for which the greatest increase in outlay was recorded in 1966; total expenditure at \$525.5 million was well above the outlay of \$459.2 million in 1965 as a consequence of a substantial increase in the use of prepared feeds and higher prices. Costs of operating farm machinery continued to move up because of increased fuel expenditures and greater outlays for repairs. The growing importance of fertilizer as an item of farm expense is reflected in the expansion in outlay for it; from \$138.8 million in 1965, this expenditure rose to \$164.1 million in 1966, largely as a result of a marked increase in its use in the Prairie Provinces. Total interest payments on farm indebtedness continued to move up as farmers made greater uses of credit sources available to them. The farm labour force declined during 1966, but wages reached new high levels.
