FARM NET INCOME, 1970

Form Income and Prices Section, AGRICULTURE DIVISION

The contents of this document may be used freely but DBS should be credited when republishing all or any part of it.

This report represents the regular annual estimate of Net Income of Farm Operators From Farming Operations for the year 1970. The estimates for 1970 contained in this report differ from those included in the Advance Preliminary Report published in April due to more up-to-date information becoming available in recent weeks. In addition to estimates of Farm Net Income, this report includes detailed information concerning income in kind, and farm operating expenses and depreciation charges. Commodity details for farm cash receipts from farming operations are presented in the DBS publication "Farm Cash Receipts 1970" (Cat. No. 21-001).

Farm Net Income Concepts. — Two different estimates of farm net income from farming operations are prepared for inclusion in this report. One is called realized net income and is obtained by adding together farm cash receipts from farming operations, supplementary payments and the value of income in kind, and deducting farm operating expenses and depreciation charges. This estimate of farm net income represents the amount of income from farming that operators have left for family living, personal taxes and investment after provision has been made for operating expenses and depreciation charges. The second estimate is referred to as total net income and is obtained by adjusting realized net income to take into account changes occurring in inventories of livestock and stocks of field crops on farms between the beginning and end of the year. This latter estimate is used in calculating the contribution of agriculture to National Income(2) and for making comparisons with net income of non-farm business enterprises.

Realized Farm Net Income. — It is estimated that for the year 1970 realized net income of farm operators from farming operations amounted to \$1,190.6 million. This estimate is 7.6 per cent below the revised 1969 value of \$1,289.1 million and 22.6 per cent below the 1965-69 average value of \$1,537.3 million. During 1970 slightly lower farm cash receipts and income in kind, and higher farm operating expenses were only partially offset by increased supplementary payments.

Total Farm Net Income. — This estimate of farm income takes into account changes in the value of farm inventories of field crops and livestock. In 1970 total farm net income amounted to \$1,233.0 million, 21.7 per cent below the 1969 level of \$1,575.0 million and 25.5 per cent below the 1965-69 average of \$1,656.1 million.

Farm Cash Receipts. — Total cash receipts from farming operations for 1970, excluding supplementary payments, are estimated at \$4,108.6 million for Canada, slightly below the value of \$4,182.1 million received in 1969 and 2.0 per cent below the average for the 5 year period 1965-69. This small decrease in cash receipts can be attributed for the most part of lower Canadian Wheat Board participation payments and increased repayments of cash advances on farm-stored grains in Western Canada being only partially offset by increased receipts from the sale of wheat, barley, oilseeds, potatoes and most livestock and livestock products.

Supplementary Payments. — In addition to the above farm cash receipts, farmers also received supplementary payments amounting to \$58.2 million during 1970 compared to \$9.9 million in 1969. For both years these payments included those made under the provisions of the Prairie Farm Assistance Att and, in 1970, payments made under the Lower Inventory For Tomorrow (LIFT) program.

Income in Kind. — This item represents the value of consumption of home-grown food, wool and woodlot products, plus an imputed rental value of farm dwellings. The farm products consumed are valued at the prices that would have been received by the farmer had they been sold. During 1970 the value of this component amounted to \$517.3 million, down slightly from the 1969 value of \$518.1 million. Increases in the value of house rent and fruits and vegetables are more than offer by farmers in the smaller components.

Value of Inventory Change. — The value of inventory change is obtained by calculating the change in the quantity of field crops and the number of livestock on farms between the beginning and end of the year and valuing the differences at average annual prices. The value of inventory change at the end of 1970 was \$42.4 million compared to \$286.0 million in 1969. The drop in the value of inventory change for 1970 can be attributed to a sharp reduction in farm-held stocks of grains, which was only partially offset by increased numbers of livestock.

Farm Operating Expenses and Depreciation Charges. — This estimate includes farm business costs incurred by farmers regardless of whether they are paid for in cash or accumulated as new debt. As far as possible they exclude outlays for goods and services obtained directly from other farmers. Subsidy payments are taken into account in order that the estimates represent only net amounts paid by farmers.

⁽¹⁾ Excludes Newfoundland.

⁽²⁾ For a discussion of the methods and concepts used to determine the contribution of agriculture to Mational Income, see Handbook of Agricultural Statistics, Part 11, Catalogue No. 21-511.

During 1970, total operating expenses and depreciation charges reached a new high level of 53,493.5 million, 2.1 per cent above the revised 1969 value of \$3,421.1 million. Outlays by farmers were higher for all provinces except Saskatchewan and Alberta. At the Canada level, taxes, gross farm rent, machinery repairs, fertilizer and lime, other livestock expenses and repairs to buildings all showed decreases over the previous year's estimates. The most notable declines were those for taxes. and for fertilizer and lime. The decline in taxes paid on owned land and buildings, from \$185.6 million in 1969 to \$176.9 million in 1970, was almost entirely due to lower payments in Ontario resulting from the farm tax reduction program which went into effect in that province. The reduction in outlays for fertilizer which occurred in the Prairie Provinces followed the use of smaller quantities of this material purchased at somewhat lower prices. Estimates of gross farm rents were down by 8.1 per cent compared to 1970 with the decrease resulting from lower values of cash and share rents in the Prairie Provinces. The decline in the share rent component was a direct consequence of the lower output of grains in the Prairie Provinces brought about by the Lower Inventory For To-morrow (LIFT) program. Wage rates rose to new high levels and the outlay for wages to farm labour reached slightly more than \$320 million. In the Prairie Provinces a reduction in the size of the hired farm labour force almost offset the higher rates being paid to give expenditures for this item in 1970 little different from those of the previous year. Total machinery expenses increased by about \$15 million to reach a new record value of \$573.2 million. Of the components included in this category, machinery repairs declined slightly from the level of the previous year. Higher feed prices in the Eastern Provinces combined with an increase in total quantities purchased to raise outlays from a value of \$547.3 million in 1969 to an estimated \$589.6 million in 1970. Expenses incurred in repairing buildings declined in 1970 compared to outlays which were made during the previous year. Electricity and telephone costs showed very little variation from the levels of 1969. Depreciation charges on farm buildings and machinery which rose in 1970 are intended to reflect the amount that farmers would have to pay to accommodate the decline in the value of farm buildings and machinery due to obsolescence and wear.
