PREFACE

This release is Part 5 in the Dominion Bureau of Statistics series "Handbook of Agricultural Statistics". Included are the revised estimates of commercial vegetable acreage and production for the years 1940-56 and the latest available data for 1957. Except for Ontario and British Columbia the acreages of all except the canning crops (beans, corn, peas and tomatoes) have been revised to have the series conform to the acreage levels indicated by the 1951 census. The 1940 and 1941 estimates were based on 1941 census data. Acreage revisions subsequent to 1941 necessitated adjustments in the total production statistics as no changes were made in yields per acre.

Estimates of vegetable acreage and production for British Columbia are prepared by the provincial Department of Agriculture while, for the province of Ontario, estimates are prepared by a committee composed of Federal and Provincial Department of Agriculture personnel and a representative of the Dominion Bureau of Statistics. No revisions for the years 1941-51 were undertaken for these crops in these provinces.

Elsewhere, the Agriculture Division of the Dominion Bureau of Statistics conducts two annual surveys; the first during the month of June, to obtain information on the acreage of vegetables planted and the second, undertaken in the fall, designed to provide information on acreage harvested and yields per acre obtained. Preliminary estimates are then forwarded to the provincial departments for reconsideration and adjusted as may be necessary on the basis of local information.

In the case of asparagus, beans, peas, corn and tomatoes, the most important canning crops, an annual survey of processors is conducted in all provinces to determine total acreages contracted. In recent years this has been supplemented by a second survey to secure information on acreages planted under contract. Also obtained by the Dominion Bureau of Statistics are statistics on quantities of these products purchased by processors during the season. In the case of these vegetables, total estimates are, to a very large extent, based on processing figures.

No estimates of vegetable acreage or production are available for Newfoundland for the period in question.
