CASH INCOME FROM THE SALE OF FARM PRODUCTS IN THE PRAIRIE PROVINCES

JANUARY TO SEPTEMBER, 1926 TO 1941

Ottawa, November 24, 1941.- The Dominion Bureau of Statistics issues today estimates of the cash income from the sale of farm products in the Prairie Provinces for the months of January to September, 1926 to 1941. These estimates are based on reports of marketings and prices received by farmers for the principal farm products. The estimates are subject to revision as more complete data on production and marketings become available.

SUMMARY

Cash income from the sale of farm products in the Prairie Provinces during the first nine months of 1941 totalled \$255,359,000 compared with \$208,588,000 in the corresponding period of 1940 and an average of \$205,192,000 for the five years 1936 to 1940. Higher receipts in 1941 have been recorded for all individual items contributing to the total. The higher returns from wheat occurred early in the year as a result of the heavy marketings of the 1940 wheat crop during the first six months of 1941. Receipts from the 1941 wheat crop in the third quarter of the year are sharply below those of the same months of 1940 but receipts from all other grains and all classes of live stock are higher for the current year. The important increases which occurred in income from the sale of live stock and animal products are the result of a greater volume of production and higher prices for these products. Income from hogs amounted to \$37,404,000 during the first nine months of 1941 as compared with \$25,667,000 during the corresponding period of 1940. Receipts from the sale of milk and butterfat were \$27,320,000 during the first nine months of 1941 as compared with \$17,759,000 in the same months of 1940.

Cash income in the third quarter of 1941 amounted to \$99,019,000 as compared with \$118,994,000 in the same quarter of 1940. The reduction of \$40,834,000 in receipts from wheat during this period was partially offset by increases in income from all other sources. For the first nine months of 1941 cash income in Alberta showed the greatest increase over that of the corresponding months of 1940. In that province the increase amounted to \$27,374,000 or 38 per cent. In Saskatchewan the increase amounted to \$11,210,000 or 12 per cent. Cash income to farmers in Manitoba was higher by \$8,187,000 or 20 per cent over the first nine months of 1940. Total cash income for the three Prairie Provinces at \$39,044,000 in September was the highest for any individual month during the current year.

Since deliveries of wheat during the last three months of 1941 will be substantially below those of the same period a year previously, the cash income from wheat during the final quarter of 1941 will be considerably below that of 1940 especially in Alberta and Saskatchewan. On the other hand, income from the sale of other grains, live stock and live-stock products will be higher. On balance cash income from the sale of farm products in the Prairie Provinces should be substantially higher for the calendar year 1941 than was the case in 1940. Income included in this report is that received from the sale of farm products and does not include any bonus payments made to farmers during the period under review.

Cash Income from the Sale of Farm Products in the Prairie Provinces,
January to September, 1926 to 1941
