1950
September Estimate of Production of Principal Field Crops, including Late-sown Crops, Fodder, Roots and Potatoes

Ottawa, September 14,1950 ( 3 pomo ) - The Dominion Bureau of Statistics issues today its second estimate of production of principal field crops together with a first estimate of production of roots and certain late-sown crops. Since the harvest of spring grains as well as late crops is abnormally late this year over much of the country, these estimates should be considered in the nature of forecasts and may be subject to signjficant revisions in the light of actual harvesting conditions. The yield estimates are based on August 31 reports from crop correspondents and on information supplied through the officials responsible for agricultural statistics in each of the provinces. The acreages seeded to the various crops with certain exceptions, are obtained from the Bureau's annual June 1 survey and include all revisions to date.

It is emphasized that an abnormally low proportion of our western Canadian correspondents' yield reports at August 31 were based on actual threshing zeturns. Crops were still green in many parts of the prairies and an extended period of dry, frost-free weather was needed to permit full realization of the atimates presented herewith. Similar conditions prevailed relative to late crops La parts of eastern Canada.

Canada's 1950 wheat crop, based on conditions at August 31, is estimated at 490 million bushels. This production is being obtained from a seeded area of 27.5 million acres with an average yield of 18.1 bushels per acre. Oat production is estimated at 415 million bushels, barley at 179 , mixed grains at 71 , rye at 14.6 million and flaxseed at 4.9 million bushels. The outtum of hay and clover is placed at 12.9 million tons and alfalfa at 3.2 million tons.

The second estimates of production of grain crops are lower than those issued on August 15. Severe frosts which struck Saskatchewan and to a lesser extent Alberta and Manitoba in the ten days following the release of the first estimate were chiefly responsible for the drop in estimated production. Wind and rain storms in some sections of the prairies and snow in the Peace River area also contributed to the decline.

Wheat - The 1950 wheat crop, currently estimated at 490 million bushels is 1.23 million above the 1949 outturn and 96 million above the ten-year (1940-49) average of 394 million bushels. In the Prairie Provinces the wheat crop is expected to reach 455 million bushels as compared with 337 million in 1949 and 370 million for the ten-year average. The anticipated average yield of wheat in the Prairie Provinces this year is 17.6 bushels per seeded acre, with Manitoba averaging 21.4 , Saskatchewan 17.3 , and Alberta 17.1 bushels per seeded acre. The reduction in quantity from the first estimate is greatest in the province of Saskatchewan but reports indicate that abnormally high proportions of the crop in all three of the Prairie Provinces will be low in quality. The western wheat ecop contains a relatively small proportion of winter wheat grown chiefly in Alberta but, due to difficulties encountered in securing acreage data required for a separate winter wheat estimate in the Prairies, all western wheat has been included under spring wheat. In the remainder of Canada production of wheat is
Data for Newfoundland not available。
placed at some 35 million bushels, with Ontario's estimated outturn of 31 million ( 29.8 million of which is winter wheat) accounting for the principal part.

Oats - Canada's 1950 oat crop, now estimated at 415 million bushels is 97 million bushels above the 1949 outturn and about 12 million above the ten-year average. The increase over last year is shared by all provinces except Nova Scotia and British Columbia-the heaviest gains occurring in Saskatchewan and Alberta。

Barley - Barley production, placed at 179 million bushels, is about 59 million above last year's crop of 120 million and some 18 million above the ten-year average. The anticipated production this year exceeds that of 1949 in all provinces except Nova Scotia-with most of the gain taking place in the Prairie Provinces.

Rye - The combined outturn of fall and spring rye is estimated at 14.6 million bushels, as compared with the 1949 crop of 10.0 million. Higher average yields per acre account for the increase, over-all acreage having remained about the same as last year.

Flaxseed - Estimated production of Canada's 1950 flaxseed crop at 4.9 million bushels is more than double the small crop of 1949. The anticipated 1950 outturn, however, is not large historically and is well below the ten-year average of 9.8 million bushels.

Dry Peas and Beans - Production of dry peas is placed at 836,000 bushels as against last year's 936,000 , while the dry bean crop is estimated at $1,349,000$ bushels, as against the 1949 production of $1,766,000$. Aoranges soovied to both crops in 1950 were well below the 1949 levels.

Corn - Production of shelled corn is estimateu at 13.1 million bushels, down somewhat from the 1949 outturn of 13.6 million. With the exception of a possible 450,000 bushels in Manitoba, Ontario will account for the entire 1950 shelled com crop. In both provinces, but particularly in Manitoba, the crop is very late. Should warm, frostafree weather be experienced until around October 1, eventual outtums may be significantly higher than indicated here. On the other hand, as with other late crops, frosts would materially reduce the present estimate.

Potatoes $=$ The potato crop is forecast at 55.4 million hundredweight as compared with the 1949 crop of 53.5 million, reduced outturns in the important producing provinces of Prince Edward Island and New Brunswick having been more than offset by increased production in all other provinces except British Columbia. Average annual production during $1945-49$ was 47.6 million hundredweight and for $1940-49$ was 45.5 million hundredweight.

Sugar Beets - A record Canadian production of just over one million tons of sugar beets is forecast for 1950. A substantial rise in acreage in all four producing provinces accounts for the indicated increase over last year's outturn of 858,700 tons.

Forage Crops $=$ Weather conditions in many parts of Canada were unfavourable to the development of hay and clover crops this year and winterkilling took a heavy toll in some eastern provinces. Production is estimated at 12.9 million tons, somewhat above the light crop of 1949. A crop of the sise indicated would be the third lowest since 1934 and is well below the ten-year average of 15.2 million tons. The alfalfa crop of 3.2 million tons, however; compares favourably with last year's production of 2.6 mfllion tons. Fodder corn production for 1950 is forecast at 5.8 million tons, up slightly from the 1949 crop of 5.5 million.

Other Crops－Production of mixed grains at 71.1 million bushels is well above last year＇s 55.9 million despite a slight decrease in acreage． mother small buckwheat crop（ 3.7 million bushels）is indicated．Last year＇s out－ turn was placed at 3.6 million．The 1950 production of turnips and mangels for live－stock feed，excluding the Prairie Provinces for which data are not currently available，is placed at 21.7 million hundredweight，up somewhat from last year＇s total of 19.6 million。 Canada＇s 1950 crop of soybeans，all of which comes from Ontario is estimated at a record 3.1 million bushels，half a million greater than the previous record crop harvested in 1949．

Note：－While production of all princh pal grains is placed considerably higher than last year it is observed that in the Prairie Provinces and also in parts of eastern Canada adverse weather conditions have resulted quite generally in crops of lower than average quality．In addition，both western grain crops and most late crops throughout the country require two weeks or more of good harvesting weather if the current production estimates are to be realized．For some crops，e．g．，shelled corn in Manitoba，an extended period of warm，dry weather could result in much better yields than indicated by the present estimate。

Summary Comparisons of Production of 1950 and 1949
All Canada－The total production of the principal grain crops in Canada for 1950 is now estimated，in bushels，as follows with the 1949 figures within brackets：Wheat $490,320,000(367,406,000)$ ；oats $414,601,000(317,916,000)$ ； barley $179,050,000(120,408,000)$ ；rye $14,567,000(10,011,000)$ ；dry peas 836,000 $(936,000)$ ；dry beans $1,349,000(1,766,000)$ ；soybeans $3,096,000(2,605,000)$ ；buck－ wheat $3,710,000(3,570,000)$ ；mixed grains 71， $148,000(55,928,000)$ ；flaxseed $4,911,000(2,284,000)$ ；shelled corn $13,128,000(13,650,000)$ ．The average yields par acre，in bushels，are estimated as follows，with the 1949 figures within brackets：Wheat 18.1 （13．3）；oats 35.8 （27．9）；barley 27.0 （20．0）；rye 12．5（8．5）； dry peas 17.1 （16．2）；dry beans 17.9 （19．0）；soybeans 21.8 （25．1）；buckwheat 23.9 （21．0）；mixed grains 42.4 （33．2）；flaxseed 9．0（7．1）；shelled com 43．0（50．2）．

The production of root and fodder crops in 1950 is now estimated as follows，with the 1949 figures within brackets：Potatoes 55，363，000 hundred－ weight（ $53,518,000$ hundredweight）；turnips，etc。21，709，000 hundredweight （ $19,582,000$ hundredweight）；hay and clover $12,897,000$ tons（ $12,122,000$ tons）； alfalfa 3，217，000 tons（2，602，000 tons）；fodder corn 5，772，000 tons（5，476，000 tons）；sugar beets $1,028,000$ tons（ 858,700 tons）．

The average yields per acre are as follows，with last year＇s figures within brackets：Potatoes 110.0 hundredweight（ 105.0 hundredweight）； turnips，etc． 211.0 hundredweight（ 186.0 hundredweight）；hay and clover 1.39 tons （ 1.28 tons）；alfalfa 2.08 tons（ 1.75 tons）；fodder corn 9.19 tons（ 9.65 tons）； sugar beets 10.02 tons（ 10.21 tons）．

Prairie Provinces－
According to the second estimate，the production of the five principal grain crops in the Prairie Provinces is，in bushels，as follows，with the 1949 figures within brackets：Three Provinces－ Wheat $455,000,000(337,000,000)$ ；oats $251,000,000(190,000,000)$ ；barley $165,000,000(109,000,000)$ ；rye $12,300,000(7,550,000)$ ；flaxseed $4,635,000$ $(2,050,000)$ ．Manitoba－Wheat $51,000,000(57,000,000)$ ；oats $61,000,000$ $(53,000,000)$ ；barley $53,000,000(40,000,000)$ ；rye $1,300,000(750,000)$ ；flaxseed $3,000,000(1,100,000)$ ．Saskatchewan－Wheat $280,000,000(183,000,000)$ ； Qats $112,000,000(85,000,000)$ ；barley $50,000,000(33,000,000)$ ；rye $6,800,000$ （ $4,400,000$ ）；flaxseed 1，200，000（ 650,000 ）．Alberta－Wheat 124，000，000（ $97,000,000$ ）； oats $78,000,000(52,000,000)$ ；barley $62,000,000(36,000,000)$ ；rye $4,200,000$ $(2,400,000)$ ；fl axseed $435,000(300,000)$ ．
