SEPTEMBER FORECAST OF PRODUCTION OF PRINCIPAL FIELD CROPS, CANADA, 1957

On the basis of yields indicated at September 15, production of most of Canada's principal field crops in 1957 will be below last year's levels. For the five major grains, prospects are for a 369.7 million bushel wheat crop, a 388.3 million bushel oat crop, a 223.4 million bushel barley crop, a flaxseed crop of 23.1 million bushels and a rye outturn of 8.6 million bushels. Although damp weather during harvest in the Prairie Provinces undoubtedly lowered the quality of the crop the yield outlook up to mid-September for oats, barley and rye remained virtually unchanged compared with a month earlier. With threshing well under way, wheat was turning out better than anticipated while flaxseed prospects had declined.

In addition to those crops for which second estimates are now available, first forecasts of production for certain special crops and for fodder corn, field roots and sugar beets are now available. Realization of the 1957 yield forecasts included in this report is dependent on the existence of favourable weather conditions throughout the remainder of the harvesting season. It is emphasized that all yields are reported on a field-run basis, no allowance being made for dockage which varies from year to year and for different crops.

Although crops in the Prairie Provinces were ready for harvest ahead of a year earlier, damp weather during much of September retarded threshing operations. Reasonable progress was made in most southern and central districts and with distinctly better harvesting conditions this past week threshing is in full swing across most of the Prairies. If favourable weather prevails through the first week to ten days in October the Dominion Bureau of Statistics will not conduct a survey on 'Progress of Harvesting in the Prairie Provinces' this year. In its place, information on harvesting progress will be included in the Bureau's November estimate of production. Across the rest of Canada harvest weather was generally good.

Forecasts of average yields in this report are based on returns from crop correspondents reporting on conditions on or about September 15, and on information supplied by processing companies and by officials responsible for agricultural statistics in each of the provinces. Estimates of acreages seeded to the various crops, with certain exceptions, are those obtained from the Agriculture Division's annual June Survey and published in the August 9 crop report, and include all revisions to date. The latest estimates of acreage, yield and production for 1956 are included in the tables for comparison.

Note: Excluding Newfoundland for which data are not available.

Prepared in the Crops Section, Agriculture Division

5502-508.21

All Wheat

Canada's 1957 wheat crop now forecast at 369.7 million bushels is some 35 per cent below last year's estimate of 573.1 million and 24 per cent below the ten-year average of 486.6 million, and is the smallest since the rust year of 1954. The decrease in production compared with last year is due to a 30 per cent decrease in yield and an 8 per cent decrease in acreage. The average yield at 17.6 bushels per acre is 9 per cent below the ten-year (1947-56) average of 19.4 bushels per acre. This year's all-Canada crop of spring wheat, including durum is forecast at 350.0 million bushels compared with the 1956 crop of 553.1 million and the ten-year average of 465.3 million. Ontario's winter wheat crop is estimated at 19.6 million bushels, a decrease of 0.4 million from last year's crop.

In the Prairie Provinces the 1957 wheat crop is now placed at 348.0 million bushels, an increase of 10.0 million bushels from the August forecast but 203.0 million bushels smaller than that produced in 1956. The current crop is well below that of 1956 in Manitoba where production is forecast at 44.0 million bushels compared with 56.0 million last year. Production in Saskatchewan, which accounts for about 57 per cent of this year's all-Canada indicated wheat crop, is estimated at 211.0 million bushels, 41 per cent below last year's 355.0 million. The Alberta crop, forecast at 93.0 million bushels, is down 34 per cent from last year's 140.0 million. The indicated average yield per seeded acre in the Prairie Provinces, on the basis of conditions at mid-September, is 17.1 bushels, with Manitoba averaging 20.8, Saskatchewan 15.8, and Alberta 19.1 bushels per acre. Current estimates of production in the Prairies include relatively small quantities of winter wheat, principally in Alberta, and an estimated 43.7 million bushels of durum wheat.

Durum Wheat

For the second consecutive year durum wheat acreage increased sharply in the Prairie Provinces. However, average yields this year, estimated at 18.4 bushels are down from last year's 26.0 bushels per acre. Mid-September indications are for a crop of 43.7 million bushels compared with the 1956 crop of 39.6 million. Estimated production by provinces, in millions of bushels, is as follows: Manitoba, 1.7; Saskatchewan, 32.0; and Alberta, 10.0.

Oats for Grain

Production of oats for grain in 1957 is forecast at 388.3 million bushels, 26 per cent below last year's 524.4 million and 1 per cent below the 1947-56 average. Production in the Prairie Provinces is forecast at 240.0 million bushels, compared with 400.0 million in 1956 and the ten-year average of 270.8 million bushels. This year's production in Manitoba, Saskatchewan and Alberta is estimated at 58.0 million, 82.0 million and 100.0 million bushels, respectively. Estimated average yields, reflecting the severe summer drought, are sharply lower compared with a year earlier in the Prairie Provinces. On the other hand, record yields were obtained in Ontario and Quebec. The indicated average yield for Canada as a whole is 35.2 bushels per acre compared with 44.8 in 1956 and the ten-year average of 35.7 bushels.

Barley

The 1957 barley crop is forecast at 223.4 million bushels, 17 per cent below last year's outturn of 269.1 million but 8 per cent above the ten-year average of 207.3 million bushels. Production in the Prairie Provinces is now placed at 216.0 million bushels, unchanged from the August forecast. This compares with last year's crop of 262.0 million and the ten-year average of 197.8 million bushels. In Manitoba the crop is forecast at 34.0 million, some 19 per cent below last year's 42.0 million bushels. Saskatchewan's crop is estimated at 82.0 million bushels, 17 per cent lower than in 1956, while in Alberta the barley crop is placed at 100.0 million, 17 per cent below last year's record crop of 121.0 million bushels. Indicated average yields are below those of a year earlier in each of the Prairie Provinces.

Rye The combined production of fall and spring rye is now estimated at 8,596,000 bushels, virtually the same as the 1956 crop of 8,584,000 but 50 per cent below the ten-year average of 17,312,000 bushels. Yields, estimated at 15.6 bushels per acre were only slightly below last year's level of 15.7 bushels.

Oil Seed Crops The 1957 flaxseed crop is now forecast at 23.1 million bushels, down 2.6 million bushels from the August estimate and 33 per cent below last year's record outturn of 34.5 million. Although acreage sown to the crop increased 15 per cent, average yields at 6.6 bushels per acre were well below last year's 11.3 bushels. Hot, dry July weather and attacks of the disease 'aster yellows' combined to cause the sharp reduction in yields.

Rapeseed production is forecast at 439.6 million pounds, up sharply from last year's estimate of 300.5 million pounds. The acreage sown to this crop in 1957 is now estimated at 648,000 acres, up 84 per cent from a year earlier but dry summer weather reduced average yields to 679 pounds per acre compared with last year's 854 pounds.

Production of soybeans currently estimated at a record 6.1 million bushels is 15 per cent above last year's 5.3 million and 64 per cent above the ten-year average of 3.7 million. The average yield per acre is forecast at 23.8 bushels compared with 21.8 last year and the ten-year average of 22.3 bushels. The bulk of the crop is grown in Ontario but some 4,000 acres were planted in Manitoba where average yields of 10.0 bushels per acre are reported.

The area sown to sunflowers in Manitoba, the only commercial producing province, is placed at 35,000 acres, up 6 per cent from a year earlier. Indicated average yields at 700 pounds per acre are 40 per cent above a year earlier. Production is forecast at 24.5 million pounds compared with 16.5 million in 1956.

The area in mustard seed at 92,000 acres in 1957 is down sharply from the 1956 area of 138,000 acres. Dry summer weather cut yields this year to 771 pounds per acre compared with last year's yields of 969 pounds. The decrease in both acreage and yield reduced the forecast of total production to 71.1 million pounds compared with last year's estimate of 133.3 million pounds.

Mixed Grains Canada's 1957 crop of mixed grains, grown principally in Eastern Canada, is estimated at 64.3 million bushels, down somewhat from the 66.6 million produced in 1956. A crop of this size would be 10 per cent above the ten-year average of 58.3 million bushels. The indicated average yield for all Canada, at 44.3 bushels per acre is 4 per cent higher than the 42.7 bushels obtained in 1956 and 12 per cent greater than the ten-year average of 39.6 bushels per acre. Some 43.6 million bushels of this year's crop was grown in Ontario where the average yield at 51.9 bushels per acre is well above last year's 45.0 bushels.

Dry Peas and Beans The 1957 production of dry peas is placed at 1.5 million bushels, a decrease of 18 per cent from last year's outturn of 1.8 million bushels. The decrease is due to a reduction in both acreage and yield. The dry bean crop is forecast at 1.2 million bushels, up slightly from last year's 1.1 million, but a little below the ten-year average of 1.3 million bushels.

Corn for Grain Production of corn in 1957 is forecast at 29.5 million bushels, 6 per cent above last year's crop of 27.8 million and 59 per cent above the ten-year average of 18.6 million bushels. The average yield of 57.3 bushels per acre is 5 per cent

above that of last year and 10 per cent above the ten-year average of 51.9 bushels. With the exception of 288,000 bushels produced in Manitoba and small quantities in other provinces for which estimates are not available, all of this year's crop of grain corn is being produced in Ontario.

Potatoes On the basis of yields indicated at mid-September, the 1957 potato crop is estimated at 40.2 million cwt. compared with last year's crop of 41.4 million and the ten-year average of 38.6 million cwt. Yield prospects improved after mid-August in all provinces except Ontario, Manitoba and British Columbia. Indicated production in the four major potato producing provinces is as follows: Prince Edward Island, 7.6 million; New Brunswick, 8.0 million; Quebec, 11.9 million and Ontario, 5.9 million cwt.

Forage Crops Production of tame hay, including clover and alfalfa, is currently placed at 18.2 million tons, 7 per cent below last year's estimate of 19.7 million, and 0.4 per cent above the ten-year average of 18.1 million. Production of fodder corn is forecast at 3.4 million tons, the same as last year but below the ten-year average of 3.7 million tons.

Sugar Beets Production of sugar beets is forecast at 987,559 tons, 11 per cent above last year's outturn of 892,955 tons, and 10 per cent above the ten-year average of 897,605 tons. Yields at 11.77 tons per acre are some 4 per cent above last year's 11.32 tons and 8 per cent above the ten-year average of 10.89 tons. Production in Alberta, placed at a record 480,671 tons, accounts for about 49 per cent of the Canadian total.

Buckwheat Production of buckwheat, grown chiefly in Ontario and Quebec is estimated at 2.1 million bushels, compared with 3.2 million in 1956 and the ten-year average of 3.0 million. Yields at 19.9 bushels per acre are 11 per cent higher than last year's level of 18.9 bushels.

Field Roots The 1957 crop of field roots (turnips, mangels, etc.) is placed at 338,000 tons compared with 425,000 tons last year and the ten-year average of 528,000 tons. Indicated production this year is lower in all provinces except New Brunswick.
