## Field Crop Reporting Series - No. 19

### SEPTEMBER FORECAST OF PRODUCTION OF PRINCIPAL FIELD CROPS, CANADA, 1975

Forecasts of average yields in this report are based on returns from crop correspondents reporting on conditions on or about September 15 and on information supplied by contracting and processing companies and by officials responsible for agricultural statistics in each of the provinces. Estimates of acreages seeded to the various crops with the exception of oats and barley in the Prairie Provinces, are those obtained from the Agriculture Division's annual July Survey of seeded acreages and the 1975 Agriculture Enumerative Survey and include all revisions to date. This estimate contains the area of oats and barley to be harvested for grain. The latest estimates of acreage, yield and production for the 1964-73 averages and 1974 are included in the tables for comparison. In addition to the crops for which second forecasts are now available, first production forecasts for buckwheat, dry peas, dry beans, corn for grain, soybeans, sugar beets, field roots and fodder corn are included in this report. It is emphasized that all yields, except where otherwise specified, are reported

Note: Excluding Newfoundland for which data are not available.

## Série de rapport sur les grandes cultures - N° 19

### PRODUCTION DES PRINCIPALES GRANDES CULTURES - PRÉVISIONS DE SEPTEMBRE CANADA, 1975

Les prévisions des rendements moyens données dans le présent rapport, sont fondées sur les déclarations des correspondants agricoles selon la situation aux environs du 15 septembre, et sur des renseignements fournis par les sociétés contractantes et de conditionnement ainsi que par les fonctionnaires chargés de dresser les statistiques agricoles dans chacune des provinces. Les estimations des superficies ensemencées des diverses cultures avec l'exception de l'avoine et de l'orge dans les provinces des Prairies, sont fournies par l'enquête annuelle de juillet de la Division de l'agriculture et de l'enquête descriptive sur l'agriculture de 1975 et comprennent toutes les rectifications jusqu'à ce jour. Cette estimation comprend la superficie pour l'avoine et pour l'orge récoltées pour le grain. Les estimations les plus récentes des superficies ensemencées, des rendements et de la production de 1974 et pour la moyenne de 1964-73 sont données dans les tableaux pour fins de comparaison. En plus des données sur les cultures pour lesquelles les deuxièmes prévisions sont présentement disponibles, le présent rapport renferme les premières prévisions de rendement du sarrasin, des pois secs,

Nota: Sans Terre-Neuve, dont les chiffres ne sont pas disponibles.
