1951

NOVEMBER ESTIMATE OF PRODUCTION OF PRINCIPAL FIELD CROPS

Ottawa, November 15, 1951 (3 p.m.) - The Dominion Bureau of Statistics issues today its November estimate of the production of Canada's 1951 grain, oilseed, forage and root crops. The yield estimates are based on October 31 reports from crop correspondents and on information supplied by processing companies and officials responsible for agricultural statistics in the various provinces. Acreage data, with minor exceptions, are obtained from the Bureau's annual June 1 survey and include all revisions to date. Also included in this report are estimates on the area and condition of winter wheat and fall rye, the estimated progress of preparation of land for the 1952 crop, and data on grain marketing in the Prairie Provinces for the first quarter of the current crop year.

Extremely unfavourable weather conditions have prevailed throughout practically the entire normal harvesting period in Western Canada, and as a result a substantial proportion of Alberta grain crops, and to a smaller extent those in Saskatchewan and Manitoba, is likely to remain in the fields until next spring. On the basis of actual harvesting results up to October 31, however, earlier estimates of the size of this year's Western Canadian grain crop have undergone only comparatively minor changes. Full realization of the current estimates will depend jointly on the extent to which the unthreshed portion of the crop escapes injury from the lengthy exposure to weather and on the development of conditions suitable for combining and threshing in the affected areas during the winter and spring months.

On the basis of current estimates, new records are still indicated for mixed grains and soybeans while near-record crops of wheat, barley, hay and clover, alfalfa and sugar beets are either in prospect or already realized. On the other hand, production of potatoes and some of the minor field crops was smaller than usual.

Wheat - Canada's 1951 wheat crop, currently estimated at 562 million bushels, is slightly more than 100 million greater than the 1950 outturn and second only to the record 567 million harvested in 1928. In the Prairie Provinces the wheat crop is placed at 531 million bushels as against 427 million last year and the record of 545 million in 1928. As indicated above, however, realization of the current estimate will be possible only if the unthreshed part of the crop remains in reasonably good condition and can be harvested without significant loss. Loss in grade is already evident from the effects of excessive moisture. However, it is anticipated that the proportion of milling grades in the current crop will be considerably higher than in 1950. Included in the western wheat crop is a small proportion of winter wheat grown chiefly in Alberta. The 1951 production of wheat in the remainder of Canada is placed at some 31 million bushels, with Ontario's outturn of 26.5 million (of which 25.5 million is winter wheat) accounting for the principal part.

Note: Data for Newfoundland not available.

Oats - Production of oats in 1951 is now placed at 493 million bushels, 73 million above that of 1950 and about 87 million above the ten-year (1941-1950) average. The 1951 crop is, however, well below the record 652 million bushels harvested in 1942. While the oat crop in all provinces except the Maritimes and Manitoba was greater than last year, the most significant increases took place in Alberta and Saskatchewan.

Barley - This year's barley crop, currently estimated at 253 million bushels, is only slightly below the record 259 million harvested in 1942 and exceeds the 1950 and ten-year average outturns by about 82 million and 85 million bushels, respectively. Production this year exceeds that of 1950 in all provinces except Nova Scotia and Quebec, with most of the increase, as with oats, occurring in Alberta and Saskatchewan.

Rye - The combined production of fall and spring rye is placed at 18.0 million bushels, as against 13.3 million in 1950 and the average of 12.9 million for the preceding ten years. Slightly over half of this year's crop of rye was produced in Saskatchewan while approximately one-third was grown in Alberta.

Oilseeds - With the exception of sunflower seed, the 1951 production of Canadian oilseeds for which estimates are currently available is well above 1950 levels. Production of flaxseed is placed at 9.2 million bushels as against 4.7 million last year and the ten-year (1941-1950) average of 9.9 million. Soybean production, at 4.4 million bushels, reached a new peak and is approximately one million bushels greater than the previous record established in 1950. The rapeseed crop, estimated at 7.1 million pounds is up sharply from last year as a result of substantial increases in both acreage and yield. Sunflower seed production, on the other hand, dropped from 9.9 million pounds in 1950 to 6.4 million this year as a result of decreases in both acreage and average yield per acre.

Mixed Grains - Production of mixed grains in 1951, while not quite as high as had been anticipated earlier, set a new record at just under 80 million bushels. Ontario, with 59.1 million bushels, and Quebec with 12.6 million, account for the larger part of this year's record outturn.

Dry Peas and Beans - This year's outturns of dry peas and dry beans are slightly higher than in 1950, with increased yields for both crops more than offsetting decreased acreages. Production of dry peas is estimated at 842,000 bushels as against 812,000 last year while the outturn of dry beans is up from 1,350,000 bushels in 1950 to 1,389,000 this year.

Shelled Corn - Production of shelled corn in 1951 is placed at 15.7 million bushels as against 13.8 million in 1950. With the exception of 135,000 bushels produced in Manitoba where yields were unusually low this year, all of the current year's crop was grown in Ontario.

Potatoes - Decreased acreages in all provinces and smaller yields per acre in all but Manitoba and Saskatchewan have sharply reduced the 1951 potato crop from last year's level. The current crop, estimated at 67.2 million bushels on the basis of field-run yields, is almost one-third less than the 97.0 million bushels produced in 1950. In addition, fairly extensive after-harvest losses, ranging from 22 to 27 per cent, are anticipated in the Maritimes, one of the major areas of commercially-grown potatoes. After-harvest losses are also expected to be fairly extensive in central Canada this year. If these losses are realized, the field-run yields set out in this report would have to be reduced if it is desired to interpret the estimate in terms of "marketable" potatoes.

Sugar Beets - Production of sugar beets is tentatively estimated at just over one million tons, compared with last year's record 1.1 million. In Alberta, extremely unfavourable weather has seriously interfered with lifting the sugar beet crop and only about half the current estimate of 420,000 tons has either been marketed or lifted. Consequently, realization of the Alberta estimate will depend on weather conditions permitting growers to lift and market the remaining beets within the next few weeks.

Forage Crops - Production of hay and clover and alfalfa in 1951 was at near-record levels but prolonged wet weather, particularly in Eastern Canada and Alberta, reduced quality considerably and caused some outright spoilage and abandonment. Consequently, the feeding quality of much of the estimated 17.2 million tons of hay and clover and 3.8 million tons of alfalfa grown in Canada this year will be lower than normal. Production of grain hay in 1951 is placed at 2.0 million tons, compared with 1.1 million last year.

Other Crops - The 1951 crop of fodder corn is placed at 5.1 million tons as against 6.4 million in 1950. Production of buckwheat, at slightly under 4 million bushels, is practically unchanged from last year. The 1951 crop of field roots (turnips, mangels, etc.) for live-stock feed, excluding the Prairie Provinces for which data are not currently available is placed at 21.3 million hundredweight, compared with 23.1 million in 1950.

#### Area and Condition of Winter Wheat and Fall Rye

The area sown to winter wheat in the autumn of 1951 is estimated at 892,000 acres, a decrease of 88,000 acres or 9 per cent as compared with the area sown in 1950, viz., 980,000 acres. The condition at October 31 was reported at 94 per cent of average as compared with 100 per cent in 1950. These data on winter wheat refer to Ontario only. Winter wheat in Western Canada has been included under spring wheat.

Fall rye sowings in Canada in 1951 are estimated at 684,000 acres, a decrease of 131,000 acres or 16 per cent as compared with 815,000 acres sown in 1950. By provinces the acreages are as follows, with last year's figures within brackets: Ontario 71,000 (79,000); Manitoba 32,000 (35,000); Saskatchewan 387,000 (490,000); Alberta 194,000 (211,000). The condition at October 31 in percentage of average is reported as follows, with last year's condition at the same date within brackets: Canada 95 (99); Ontario 97 (100); Manitoba 95 (90); Saskatchewan 96 (100); Alberta 94 (98).

#### Preparation of Land for 1952 Crop

Of the land intended for the next year's crop 41 per cent is estimated to have been worked at October 31, as compared with 58 per cent at the same date last year. By provinces the percentages are as follows, with the 1950 figures within brackets: Prince Edward Island 62 (58); Nova Scotia 55 (57); New Brunswick 68 (67); Quebec 70 (72); Ontario 68 (67); Manitoba 58 (51); Saskatchewan 22 (49); Alberta 30 (66); British Columbia 39 (41).

## Summary of Comparisons of Production, 1951 and 1950

### All Canada

The November estimate of the production of grain crops in Canada in 1951 is, in bushels, as follows, with the 1950 production in brackets: wheat 562,398,000 (461,664,000); oats 493,292,000 (419,930,000); barley 252,930,000 (171,393,000); rye 18,014,000 (13,333,000); mixed grains 79,995,000 (74,190,000); corn, shelled 15,662,000 (13,839,000); buckwheat 3,986,000 (3,977,000); peas, dry 842,000 (812,000); beans, dry 1,389,000 (1,350,000); flaxseed 9,212,000 (4,686,000); soybeans 4,367,000 (3,323,000).

Root and fodder crop production in Canada 1951 is now estimated as follows, with the 1950 figures within brackets: Potatoes 67,195,000 bushels (97,045,000 bushels) field roots 21,261,000 cwt. (23,093,000 cwt.); hay and clover 17,240,000 tons (12,913,000 tons); alfalfa 3,829,000 tons (3,233,000 tons); fodder corn 5,121,700 tons (6,421,000 tons); grain hay 1,993,000 tons (1,109,000 tons); sugar beets 1,027,100 tons (1,128,000 tons).

### Prairie Provinces

The production of grain in the Prairie Provinces is now estimated, in bushels, as follows, with the 1950 figures within brackets: Three provinces - Wheat 531,000,000 (427,000,000); oats 323,000,000 (254,000,000); barley 238,000,000 (157,000,000); rye 16,080,000 (11,200,000); flaxseed 8,400,000 (4,300,000). Manitoba - Wheat 52,000,000 (50,000,000); oats 60,000,000 (70,000,000); barley 56,000,000 (55,000,000); rye 680,000 (1,300,000); flaxseed 4,500,000 (2,900,000). Saskatchewan - Wheat 329,000,000 (260,000,000); oats 140,000,000 (112,000,000); barley 77,000,000 (46,000,000); rye 9,300,000 (6,200,000); flaxseed 2,700,000 (1,000,000). Alberta - Wheat 150,000,000 (117,000,000); oats 123,000,000 (72,000,000); barley 105,000,000 (56,000,000); rye 6,100,000 (3,700,000); flaxseed 1,200,000 (400,000).
