1979 Calendar

The scheduled release dates of the Field Crop Reporting Series, Statistics Canada catalogue number 22-002, are detailed in the Reporting Calendar. Eleven of the reports in the series are Telegraphic Crop Reports which present commentary on the progress of field operations, crop development and environmental influences, including levels of precipitation. Six of the Telegraphic Reports describe crop conditions across Canada, while five deal exclusively with the Prairie Provinces. Nine statistical reports are released at strategic points in the crop year detailing farm stocks of grain, crop area, yield and production. Two stock reports detail the total stocks of the major Canadian grains by position, and the farm-held stocks in the Prairie Provinces, by province. The first two area reports contain the surveyed planting intentions of producers while the August estimates are made after seeding has been completed. Yields and levels of production are forecast twice, based on expectations to the end of harvest, while the November estimate is released after the harvest. A breakdown of the previous year's crop area, yield and production seeded on summerfallow and on stubble land in the Prairie Provinces, is contained in the January report, along with an overview of the Crop Reporting system. The statistical coverage of crops is outlined on the table below, by month of Report release.

Crop Report data series are available through Statistics Canada's computerized data bank, CANSIM (Canadian Socio-Economic Information Management System).
