REPORT ON THE TRADE OF CANADA

GRAIN TRADE OF CANADA

BY THE COMMISSIONER OF THE GENERAL LAND OFFICE

1919

GRAIN STATISTICS, 1919.

PREFACE.

The present report on the Grain Trade of Canada is issued by the Internal Trade Division of the Dominion Bureau of Statistics in collaboration with the Board of Grain Commissioners.

The report as a whole has been prepared by W. Dougan under the supervision of R. J. McFall, Ph.D., as chief of the Division of Internal Trade Statistics.

The object of the report is to assemble the more important grain statistics in one volume as a handbook for the grain trade. It will be observed that the volume has been enlarged and now deals comprehensively with grain production and trade both in Canada and other countries.

The first part of the volume shows the movement of the grain in detail, the production, inspection, and handlings at country, interior terminal, public terminal, private terminal elevators in the west and at public elevators in the east, of Canadian grain, and of United States grain at eastern elevators.

As stated in the previous report, the country is divided into two main areas, Eastern and Western. The movement is given both by a balance sheet and graphically by charts for wheat, oats and barley. An outstanding feature which might be drawn to the attention of the reader is the comparative increase over the previous year of the flow through Canadian channels over those of the United States.

The future prices of oats, barley and flax are shown by weeks at Duluth and Winnipeg. Daily cash prices are also shown at Winnipeg.

A new feature has been introduced into the report in the statements of the grain ground and the products produced therefrom by the mills in the eastern and western divisions.

The second part of the report deals with international trade extensively. This is felt to be most important in view of Canada's paramount interest in the export market. The production, imports and exports of wheat, and also of wheat flour, oats, barley, rye, and corn, are shown for all important countries, and summaries are given for the chief commercial nations. These data should prove valuable to those engaged in the export of grain from Canada and to every one interested in the vital problem of Canada's relation to the world's grain market.

A very important portion of the data has been supplied by E. A. Ursell, Statistician of the Board of Grain Commissioners. The data on International Trade are based upon the statistics of the International Institute of Agriculture and other sources.

R. H. COATS,
Dominion Statistician.

DOMINION BUREAU OF STATISTICS.

MOVEMENT OF CANADIAN WHEAT, CROP YEAR 1918-19.

The accompanying map is inserted to describe graphically the movements of Canadian wheat into the principal channels of consumption within the country and towards our export market.

It has been impossible to portray all the details of movement within the country and the expedient has been adopted to showing a pool for the Western Inspection Division and another pool for the Eastern Inspection Division, and showing the principal streams into and out of each of these pools for the year, also the movements through the chief grain centres of the country.

The western pool, of course, is fed chiefly by the crop in the Western Division. This was computed for the crop year under discussion to be 165,354,324 bushels. There also was on hand at the beginning of the year, in accordance with the closest calculations available, some 543,498 bushels. The only other stream entering this pool is the small amount of 390,834 bushels, of which 338,081 bushels entered from Australia via Vancouver, B.C.; the balance of 2,813 bushels were imported from United States. 321,760 bushels of this amount were reshipped to Great Britain and other countries; 92,811 bushels of Canadian wheat were also exported over seas while 7,752 bushels were exported direct by rail to United States. This makes a total flow into this pool during the year of 166,288,656 bushels. Of this, 126,472,238 bushels were used commercially, that is, shipped out of the division or milled within the division. Of this, 30,000,000 bushels were ground in the west. The balance sheet of wheat in statement No. 39, shows the destination of the quantity shipped out of this pool, and the map shows the movements east distinguishing between what went to the terminals at Fort William and Port Arthur and what was shipped all rail to the east. In addition to this amount disposed of commercially, it is estimated that 31,175,861 bushels were used for seed and that 2,944,515 bushels were held over in store to the next crop year.

253,607 bushels are shown as going straight through to the east by rail, either destined to the Eastern Division or to the eastern part of the United States. It has been impossible, at this stage of the flow, to distinguish between what was reshipped from the eastern pool and what was shipped through Eastern Canada to United States: consequently, this has all been shown as going into the eastern pool, and the shipments by rail through the Eastern Division into the United States have all been shown as shipments out of the eastern pool. The largest shipment out of the west went by way of the terminals, Fort William and Port Arthur. 97,476,240 bushels passed into the public and private terminal elevators at Fort William and Port Arthur during the crop year. No attempt has been made to show the quantities on hand at these terminals beginning with the end of the crop year as distinguished from the quantity on hand in the division as a whole, on the map. Consequently, the streams shown as shipments from the terminals do not exactly agree in amount to the quantity shown as received at these terminals. 5,077,110 bushels were shipped eastward from these cities by rail and, being joined to the rail shipments from the far west, make the total rail shipments east of 5,330,717 bushels. The water shipments from the terminals are known to a high degree of exactness, and amounted for this year to 90,431,782 bushels. In addition to this 623,669 bushels of Canadian wheat were shipped eastward by water from Duluth. Of these total lake shipments, 55,063,871 bushels entered the bay port elevators and, owing to the bay port elevators being more thoroughly cleared of their supplies at the beginning of

the year than at the end, 54,828,236 bushels were forwarded thence by rail. 9,946,811 bushels from the lake stream were received at Goderich and forwarded thence by rail; 20,246,806 bushels were taken from this lake stream at Port Colborne, of which 11,186,548 bushels were shown as forwarded by rail into the eastern pool. However, to be exact, a large part of this was milled in the city of Port Colborne. It being impossible to show the amount milled at each centre, this has been shown as going into the eastern pool, and the figures are shown in one total. Of this wheat received at Port Colborne, 9,809,758 bushels were forwarded down through lake Ontario, the large part of which was received at the Kingston elevator, being forwarded thence again to Montreal.

Some 988,286 bushels were shipped from Fort William and Port Arthur to Duluth-Superior, 623,669 bushels went to Canadian ports from these aforesaid ports. Of the movement down the lakes to United States ports, some 2,797,037 bushels were received at Buffalo, Detroit received 121,673 bushels, Duluth-Superior 988,286 bushels, Port Huron 58,000 bushels. The smaller streams have not been shown on the map.

The eastern pool received during the year not only the crop that was estimated at 23,721,026 bushels, but also the shipments from the west, amounting in all to 91,777,413 bushels. The route by which the various parts of this stream entered have already been sketched, excepting that in addition it is necessary to explain the offshoot from the main railway stream of 22,008,127 bushels in Montreal. This amount, plus the 9,809,758 bushels shipped down the St. Lawrence by water, was received in the public elevators situated in the city of Montreal. This, being such a large stream, has been shown separately before it enters the main eastern pool. In addition to the crops and the receipts from the west, the map shows 1,775,120 bushels as received into the pool for the year from the quantity on hand at the end of the previous year. There also was a small importation from the United States into this division, amounting to 27,110 bushels.

The movements out of this year's eastern pool included 2,049,974 bushels carried over in store into the following year, 2,321,478 bushels used for seed in the division, 49,000,000 milled, 24,259,739 bushels shipped out for export from the St. Lawrence ports, 2,284,538 shipped out by way of Halifax, and 8,747,114 shipped out by way of St. John. The deductions from the Customs reports show that 19,037,331 bushels were shipped out via the United States to other countries. In addition there was a small amount of 184,109 bushels cleared for United States consumption, making the total shipments by rail from the east into the United States, 19,221,440 bushels.

Two main streams are shown as going into the United States. Of these 2,797,037 bushels went by way of Buffalo and 1,167,959 bushels via other United States lake ports, and 19,037,331 bushels moved by rail from the eastern pool, while 184,109 bushels were cleared for consumption in the United States from the shipments from the east, and 3,964,996 bushels from the shipments to lake ports, including Duluth. Thus 19,102,080 bushels were cleared for export to other countries via the United States from the eastern pool. No attempt has been made to show by what ports this wheat moved out of the United States. The map indicating merely that it went via United States Atlantic ports. So far as our export is concerned, it is correct to conclude that this was exported into other countries by way of United States ports.

This very light movement of 19,102,080 bushels of wheat through United States ports as compared with some 35,392,931 bushels via Canadian ports including Vancouver speaks volumes for the future of the Canadian channel of export trade. No doubt the threatened United States embargo in Canadian wheat has

something to do with this large movement via Canadian ports. However, when the depth of Welland canal has increased so the large boats can come down as far as Kingston, larger movements via these ports may be looked for in the future.

The balance sheets in statements Nos. 39, 40 and 41 show the movements of all kinds of grain into and out of the year's pool for each division and for Canada as a whole, and the balance sheets for the public terminal elevators, interior terminal elevators, and public elevators in the east, show the annual movement through each particular grain centre in Canada. Those wishing to study more this detailed movement for wheat and the full movement of other grains are referred to these balance sheets, the export and other commercial movements of these coarse grains being of relative unimportance as compared with their local consumption.

MOVEMENT OF CANADIAN OATS, CROP YEAR 1918-19.

The crop in the western division was computed for the crop year under discussion to be 224,004,758 bushels. There also was on hand at the beginning of the year, in accordance with the closest calculations available, some 7,679,214 bushels. The only other stream entering this pool is the small amount of 11,100 bushels entering from the United States. This makes a total flow into this pool during the year of 231,695,072 bushels. Of this, only 17,070,147 bushels were used commercially, that is, shipped out of the division or milled within the division. Of this, 4,000,000 bushels are estimated to have been ground in the west. The balance sheet of oats in statement No. 39 shows the destination of the quantity shipped out of this pool and the map shows the movements east distinguishing between what went to the terminals at Fort William and Port Arthur and what was shipped all rail to the east. In addition to this amount disposed of commercially, it is estimated that 23,899,110 bushels were used for seed and that 6,719,742 bushels were held over in store to the next crop year.

Seven hundred and twenty-six thousand five hundred and sixty bushels are shown as going straight through to the east by rail, either destined to the Eastern Division or to the east of the United States. It has been impossible, at this stage of the flow, to distinguish between what was reshipped from the eastern pool and what was shipped through Eastern Canada to United States, consequently, this has all been shown as going into the eastern pool, and the shipments by rail through the Eastern Division into the United States have all been shown as shipments out of the eastern pool. The largest shipment out of the west went by way of the terminals, Fort William and Port Arthur. 12,863,928 bushels are reported to have passed into the public and private terminal elevators at Fort William and Port Arthur during the crop year. No attempt has been made to show the quantities on hand at these terminals beginning with the end of the crop year as distinguished from the quantity on hand in the division as a whole, on the map. Consequently, the streams shown as shipments from the terminals do not exactly agree in amount to the quantity shown as received at these terminals. 5,873,684 bushels were shipped eastward from these cities by rail and, being joined to the rail shipments from the far west, make the total rail shipments east of 6,600,244 bushels. The water shipments from the terminals are known to a high degree of exactness and amounted for this year to 6,582,906 bushels. In addition to this, 298,000 bushels were shipped eastward by water from Duluth of Canadian oats. Of these total lake shipments

1,805,771 bushels entered the bay port elevators and, owing to the bay port elevators being more thoroughly cleared of their supplies at the beginning of the year than at the end, 1,741,786 bushels were forwarded thence by rail. 2,005,357 bushels from the lake stream were received at Goderich and forwarded thence by rail. 352,935 bushels were taken from this port stream at Port Colborne. Of the oats received at Port Colborne, 1,223,512 bushels were forwarded down through lake Ontario, part of which was received at the Kingston elevator and forwarded thence again to Montreal. A small amount of oats moved down the lakes to United States ports, Buffalo being the only port to receive anything, viz., 1,406,419.

The eastern pool received during the year not only the crop that was estimated at 202,307,742 bushels, but also the shipments from the west, amounting in all to 11,348,171 bushels. The route by which the various parts of this stream entered have already been sketched, excepting that in addition it is necessary to explain the off-shoot from the main railway stream of 2,875,709 bushels into Montreal. This amount, plus the 1,223,512 bushels shipped down the St. Lawrence by water, was received in the public elevators situated in the city of Montreal. This being such a large stream, has been shown separately before it enters the main eastern pool. In addition to the crops and the receipts from the west, the map shows 6,584,693 bushels as received into the pool for the year from the quantity on hand at the end of the previous year. There also was a large importation from the United States into this division, amounting to 4,693,287 bushels.

The movements out of this year's eastern pool included 12,652,429 bushels carried over in store into the following year, 13,593,727 bushels used for seed in the division, 5,100,000 milled, 1,243,973 bushels shipped out for export from the St. Lawrence ports, and 19,280 bushels shipped out by way of St. John. The deductions from the Customs reports show that 10,246,749 bushels were shipped out via United States to other countries. In addition there was a small amount of 447,377 bushels cleared for United States consumption, making the total shipments by rail from the east into the United States, 10,694,126 bushels.

Two main streams are shown as going into the United States. 1,406,419 bushels went by way of Buffalo and 10,246,749 bushels moved by rail from the eastern pool. 447,377 bushels were cleared for consumption in the United States from the shipments in the east. The remaining 10,996,254 bushels were cleared for export to other countries via United States by rail from the eastern pool. No attempt has been made to show by what ports this oats moved out of the United States, the map indicating merely that it went via United States Atlantic ports.

This heavy movement of 10,996,254 bushels through United States ports as compared with 1,263,253 bushels by way of Canadian ports is a very significant matter for Canadian Commerce.

The balance sheets in statements Nos. 39, 40 and 41 show the movements of all kinds of grain into and out of the year's pool for each division and for Canada as a whole, and the balance sheets for the public terminal elevators in the east, show the annual movement through each particular grain centre in Canada. Those wishing to study this more detailed movement for oats and the full movement of other grains are referred to these balance sheets.

The most striking thing in connection with oats is the small quantity exported as compared with the number of bushels produced.

PRODUCTION.

TABLE No. 1.—Detailed Historical Survey of Grain Crops in Canada.

FALL WHEAT.

Crop Year	Acreage harvested.	Average Yield per Acre.	Production.	Weight per measured Bushel.	Average Farm Price per Bushel.	Farm value.	Winnipeg cash price per Bushel.				Domestic exports including flour, fiscal year beginning April 1 of indicated year.	Per cent of Crop exported.

Figures not available to date.

Exporting Countries include: Bulgaria, U.S.A., Argentine, Roumania, Russia and South Africa.

Importing Countries include: Germany, Austria-Hungary, Belgium, Denmark, Spain, France, Great Britain and Ireland, Italy, Netherlands, Sweden, Switzerland, Canada.

HARVEST TIMES OF THE WORLD.

The following shows the month of the Wheat harvest in the Wheat-growing sections of the world:—

January	Australia, New Zealand and Chili.
February and March	East India, Upper Egypt.
April	Lower Egypt, Syria, Cyprus, Persia, Asia Minor, India, Mexico and Cuba.
May	Algeria, Central Asia, China, Japan, Morocco, Texas and Florida.
June	Turkey, Greece, Italy, Spain, Portugal, south of France, California, Louisiana, Mississippi, Alabama, Georgia, Carolinas, Tennessee, Virginia, Kentucky, Kansas, Arkansas, Utah, Missouri.
July	Roumania, Bulgaria, Austro-Hungary, south of Russia, Germany, Switzerland, France, south of England, Oregon, Nebraska, Minnesota, Wisconsin, Colorado, Washington, Iowa, Illinois, Indiana, Michigan, Ohio, New York, New England and Eastern Canada.
August	Belgium, Holland, Great Britain, Denmark, Poland, Colombia, North and South Dakota, Western Canada.
September and October	Scotland, Sweden, Norway and north of Russia.
November	Peru, South Africa and Argentina.
December	Burmah and Argentina.
