GRAIN STATISTICS 1920

PREFACE

The present report on the Grain Trade of Canada is issued by the Internal Trade Branch of the Dominion Bureau of Statistics in collaboration with the Board of Grain Commissioners for Canada.

The report as a whole has been prepared by W. Dougan under the supervision of F. J. Horning, Chief of the Internal Trade Branch of the Bureau.

The object of the report is to assemble the more important statistical data relating to the grain trade in one volume. Statistics are presented showing in detail the various channels and markets through which the grain passes from the farm to its final disposition. Comparative data are included for other countries than Canada.

The first part of the report deals with the domestic movement of grain in detail—the production, inspection and handlings at country, interior terminal, public terminal and private terminal elevators in the West and at public elevators in the East, including handlings of United States grain in the eastern elevators. As stated in previous reports, Canada is divided into two divisions for the marketing of grain, the Western and the Eastern, the dividing line being at Port Arthur and Fort William, which are included in the western field.

Tables have been added in the present report showing the exports of grain from Canada by Customs ports of exit, and countries of destination.

Monthly average cash prices of wheat, oats, and barley at Winnipeg are shown for the last four years by chart. Average future options on oats, barley, flax and rye at Winnipeg, Minneapolis, and Chicago are tabulated. During the crop year 1919-1920, the marketing of wheat was under the control of the Canadian Wheat Board and wheat futures were not dealt in.

An important portion of the data has been supplied by E. A. Ursell, Statistician of the Board of Grain Commissioners. The data relating to the International Grain Trade are based upon the statistics of the International Institute of Agriculture and other sources.

R. H. COATS,

Dominion Statistician.

MOVEMENT OF CANADIAN WHEAT, CROP YEAR 1919-20.

The accompanying map is inserted to describe graphically the movements of Canadian wheat into the principal channels of consumption within the country and towards our export markets.

It has been impossible to portray all the details of movement within the country and the expedient has been adopted to showing a pool for the Western Inspection Division and another pool for the Eastern Inspection Division, and showing the principal streams into and out of each of these pools for the year, as well as the movements through the chief grain centres of the country.

The Western pool, of course, is fed chiefly by the crop in the Western Division. This was computed for the crop year under discussion to be 166,622,469 bushels. There also was on hand at the beginning of the year, in accordance with the closest calculations available, some 2,944,515 bushels. The only other stream entering this pool is the small amount of 53,995 bushels (of which 26,055 bushels were imported at Vancouver, B.C.). This makes a total flow into this pool during the year of 169,629,979 bushels. Of this, 134,908,865 bushels were used commercially, that is shipped out of the division or milled within the division. Of this, 32,000,000 bushels were estimated to be ground in the west for home consumption, while 6,269,274 bushels were exported as flour. The summary of wheat in statement No. 51 shows the destination of the quantity shipped out of this pool, and the map shows the movements east distinguishing between what went to the terminals at Fort William and Port Arthur and what was shipped all rail to the east. In addition, to this amount disposed of commercially, it is estimated that 29,557,225 bushels were used for seed and that 4,215,711 bushels were held over in store to the next crop year.

Eighty-nine thousand, two hundred and forty-four bushels are shown as going straight through to the east by rail, either destined to the Eastern Division or to the eastern part of the United States. It has been impossible, at this stage of the flow, to distinguish between what was reshipped from the eastern pool and what was shipped through Eastern Canada to United States. Consequently, this has all been shown as going into the eastern pool and the shipments by rail through the Eastern Division into the United States have been shown as shipments out of the eastern pool. The largest shipment out of the west went by the way of the terminals Fort William and Port Arthur. 92,665,646 bushels passed into the public and private terminal elevators at Fort William and Port Arthur during the crop year. No attempt has been made to show on the map the quantities on hand at these terminals beginning with the end of the previous crop year as distinguished from the quantity on hand in the division as a whole. As a result, the streams shown as shipments from the terminals do not exactly agree in amount to the quantity shown as received at these terminals. 13,478,174 bushels were shipped eastward from these cities by rail, and, being joined to the rail shipments from the west, make the total rail shipments east of 13,567,418 bushels. The water shipments from the terminals are known to a high degree of exactness, and amounted for this year to 80,803,960 bushels. In addition to this, 840,525 bushels of Canadian wheat were shipped eastward by water from Duluth. Of these total lake shipments, 49,631,784 bushels entered the bay port elevators and, owing to the bay port elevators being more thoroughly cleared of their supplies at the beginning of the year than at the end, 48,247,434 bushels were forwarded thence by rail. 9,256,766 bushels from the lake stream were received at Goderich and forwarded thence by rail; 19,507,833 bushels were taken from this lake stream at Port Colborne, of which 4,681,547 bushels were shown as forwarded by rail into the eastern pool. However, to be exact,

a large part of this was milled in the city of Port Colborne. It being impossible to show the amount milled at each centre, this has been shown as going into the eastern pool, and the figures are shown in one total. Of this wheat received at Port Colborne, 10,176,805 bushels were forwarded down through Lake Ontario, the large part of which was received at Montreal.

Some 975,264 bushels were shipped from Winnipeg by rail to Duluth-Superior, 801,083 bushels went to Canadian ports, and 39,442 bushels to Buffalo from these aforesaid ports. Of the movement down the lakes to United States ports, some 300,443 bushels were received at Buffalo, Chicago 50,000 bushels, Port Huron 1,016,944 bushels. The smaller streams have not been shown on the map.

The eastern pool received during the year not only the crop that was estimated at 26,637,931 bushels, but also shipments from the west, amounting in all to 93,805,074 bushels. The route by which the various parts of this stream entered have already been sketched. In addition, it is necessary to explain the offshoot from the main railway stream of 33,059,435 bushels in Montreal. This amount, plus the 10,176,805 bushels shipped down the St. Lawrence by water, was received in the public elevators situated in the city of Montreal. This, being such a large stream, has been shown separately before it enters the main eastern pool. In addition to the crops and the receipts from the west, the map shows 2,670,774 bushels as received into the pool for the year from the quantity on hand at the end of the previous year. There also was a small importation from the United States into this division, amounting to 61,484 bushels.

The movements out of this year's eastern pool included 5,096,900 bushels carried over in store into the following year, 2,349,429 bushels used for seed in the division, 26,000,000 milled for consumption, 32,158,336 bushels shipped out for export from the St. Lawrence ports, 2,224,754, 18,807,822 for export shipped out by way of Halifax, and 13,626,542 shipped out by way of St. John. The deductions from the Customs reports show that 13,023,281 bushels were shipped out via the United States to other countries. In addition there was a small amount of 147,499 bushels cleared for United States consumption, making the total shipments by rail from the east into the United States, 13,170,780 bushels.

Two main streams are shown as going into the United States. Of these 339,885 bushels went by way of Buffalo and 1,066,944 bushels via other United States lake ports, and 13,170,780 bushels moved by rail from the eastern pool, while 147,499 bushels were cleared for consumption in the United States from the shipments from the east, and 1,367,387 bushels from the shipments to lake ports, including Duluth. Thus 13,023,281 bushels were cleared for export to other countries via the United States from the eastern pool. No attempt has been made to show by what ports this wheat moved out of the United States, the map indicating merely that it went via United States Atlantic ports. So far as our export is concerned, it is correct to conclude that this was exported into other countries by way of United States ports.

Attention is drawn to the very light movement of 13,023,281 bushels of wheat through United States ports as compared with 48,345,771 bushels via Canadian ports. It will be remembered that the marketing of wheat during the crop year 1919-20 was under the control of the Canadian Wheat Board. During a large part of this time an embargo was also in force against the movement of Canadian wheat and wheat products over United States railways owing to the congested condition of transportation facilities and the large crop to be marketed from the United States.

The summaries in statements Nos. 51, 52 and 53, show the movements of all kinds of grain into and out of the year's pool for each division and for Canada as a whole, and the summaries for the public terminal elevators, interior terminal elevators, and public elevators in the east, show the annual movement through

each particular grain centre in Canada. Those wishing to make a more detailed study of the movement of wheat and other grains are referred to these summaries, the export and other commercial movements of these coarse grains being of relative unimportance as compared with their local consumption.

MOVEMENT OF CANADIAN OATS CROP YEAR, 1919-20.

The crop in the Western Division was computed for the crop year 1919-20 to be 238,030,881 bushels. There also was on hand at the beginning of the year some 6,719,742 bushels. The only other stream entering this pool is the small amount of 5,026 bushels imported from the United States. This makes a total flow into the pool during the year of 244,755,649 bushels. Of this, 46,227,230 bushels were used for commercial purposes, that is, shipped out of the division or milled within the division. 5,553,846 bushels are estimated as being milled for consumption and 451,497 bushels for export. The summary regarding oats in statement No. 51 shows the destination of the quantity shipped out of this pool and the map shows the movements east distinguishing between all rail shipments to the east and shipments via the terminals at Fort William and Port Arthur. In addition to this amount disposed of commercially, it is estimated that 25,322,327 bushels were used for seed and that 5,772,529 bushels were held over in store to the next crop year.

Three million, five hundred and forty-six thousand, four hundred and thirty-three bushels are shown as going straight through to the east by rail, either destined to the Eastern Division or to the eastern portion of the United States. It has been impossible, at this stage of the flow, to distinguish between what was reshipped from the eastern pool and what was shipped through Eastern Canada to United States. Consequently, this has all been shown as going into the eastern pool, and the shipments by rail through the Eastern Division into the United States have all been shown as shipments out of the eastern pool. The largest shipment out of the west went by way of the terminals, Fort William and Port Arthur. 25,156,871 bushels are reported to have passed into the public and private terminal elevators at Fort William and Port Arthur during the crop year. No attempt has been made to show on the map the quantities on hand at these terminals beginning with the end of the previous crop year as distinguished from the quantity on hand in the division as a whole. The streams shown as shipments from the terminals, therefore, do not exactly agree in amount with the quantity shown as received at these terminals. 14,637,707 bushels were shipped eastward from these cities by rail, and, being joined to the rail shipments from the west, make total rail shipments east of 18,184,140 bushels. The water shipments from the terminals are known to a high degree of exactness and amounted for this year to 16,395,132 bushels. In addition, 5,777 bushels were shipped from Winnipeg to Duluth, while 68,649 went by way of Vancouver, B.C. Of these total lake shipments, 6,288,995 bushels entered the bay port elevators and, owing to the bay port elevators being more thoroughly cleared of their supplies at the end of the year than at the beginning, 6,387,483 bushels were forwarded thence by rail. 3,216,939 bushels from the lake stream were received at Goderich and forwarded thence by rail. 367,681 bushels were taken from this port stream at Port Colborne. Of the oats received at Port Colborne, 2,437,945 bushels were forwarded down through lake Ontario, part of which was received at Montreal. A quantity of oats moved down the lakes to United States ports, Buffalo receiving 4,960,938 bushels and Chicago 418,213 bushels.

The eastern pool received during the year not only the crop that was estimated at 156,356,119 bushels, but also shipments from the west, amounting in all to 29,200,121 bushels. The route by which the various parts of this stream

entered have already been sketched. As in the case of wheat, an off-shoot from the main railway stream shows 2,883,276 bushels shipped into Montreal by rail. This amount, plus the 2,437,945 bushels shipped down the St. Lawrence by water, was received in the public elevators situated in the city of Montreal. This being such a large stream, has been shown separately before it enters the main eastern pool. In addition to the crops and the receipts from the west, the map shows 12,652,429 bushels as received into the pool for the year from the quantity on hand at the end of the previous year. There also was an importation from the United States into this division, amounting to 1,914,799 bushels.

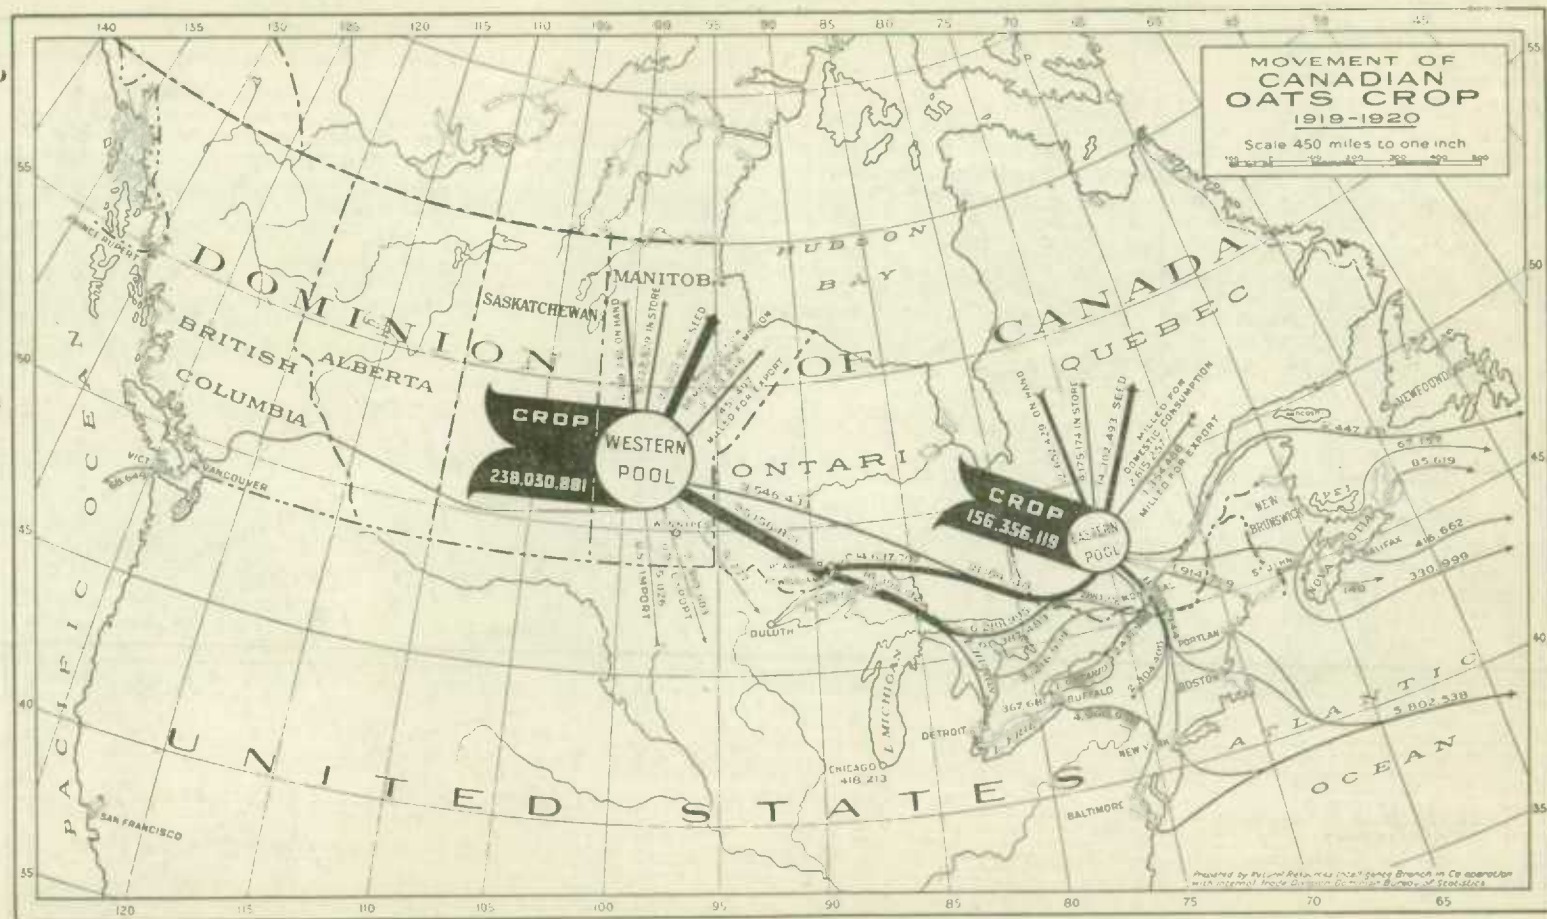

The movements out of this year's eastern pool included 4,175,174 bushels carried over in store into the following year, 14,302,493 bushels used for seed in the division, 2,615,257 bushels milled for consumption, 1,354,488 bushels milled for export, 2,447,251 bushels shipped out for export from the St. Lawrence ports, and 330,999 bushels shipped out by way of St. John, 416,662 bushels by Halifax, 67,157 bushels by Charlottetown, 85,619 bushels by Sydney, 140 bushels by Lunenburg. The deductions from the Customs reports show that 5,802,538 bushels were shipped out via United States to other countries. In addition, there was an amount of 2,304,406 bushels cleared for United States consumption, making the total shipments by rail from the east into the United States, 8,106,944 bushels.

Two main streams are shown as going into the United States. 4,960,938 bushels went by way of Buffalo and 8,106,944 bushels moved by rail from the eastern pool. 2,304,406 bushels were cleared for consumption in the United States from the shipments in the east. The remaining 5,802,538 bushels were cleared for export to other countries via United States by rail from the eastern pool. No attempt has been made to show by what ports these oats moved out of the United States, the map indicating merely that it went via United States Atlantic ports.

During the crop year under discussion the export of oats through the United States ports dropped from 10,996,254 bushels to 5,802,538 bushels, as compared with an increase from 1,263,253 bushels to 3,427,156 bushels in the movement through Canadian ports.

The summaries in statements Nos. 51, 52 and 53, show the movements of all kinds of grain into and out of the year's pool for each division and for Canada as a whole, and the summaries for the public terminal elevators in the east show the annual movement through each particular grain centre in Canada. Those wishing to study the movement of oats and of other grains in more detail are referred to these summaries.

The most striking thing in connection with oats is the small quantity exported as compared with the number of bushels produced.

Prepared by the Dominion Bureau of Statistics, Ottawa, 1921

HARVEST TIMES OF THE WORLD

The following shows the month of the Wheat harvest in the Wheat-growing sections of the world:—

January	Australia, New Zealand, and Chili.
February and March	East India, Upper Egypt.
April	Lower Egypt, Syria, Cyprus, Persia, Asia Minor, India, Mexico, and Cuba.
May	Algeria, Central Asia, China, Japan, Morocco, Texas, and Florida.
June	Turkey, Greece, Italy, Spain, Portugal, south of France, California, Louisiana, Mississippi, Alabama, Georgia, Carolinas, Tennessee, Virginia, Kentucky, Kansas, Arkansas, Utah, Missouri.
July	Roumania, Bulgaria, Austro-Hungary, south of Russia, Germany, Switzerland, France, south of England, Oregon, Nebraska, Minnesota, Wisconsin, Colorado, Washington, Iowa, Illinois, Indiana, Michigan, Ohio, New York, New England, and Eastern Canada.
August	Belgium, Holland, Great Britain, Denmark, Poland, Colombia, North and South Dakota, Western Canada.
September and October	Scotland, Sweden, Norway, and north of Russia.
November	Peru, South Africa and Argentina.
December	Burmah and Argentina.
