DOMINION BUREAU OF STATISTICS

FRUIT STATISTICS
OF CANADA
1921-24

*Prepared in collaboration with the Fruit Branch of the Dominion
Department of Agriculture, and published by Authority
of the Hon. Thos. A. Low, M.P., Minister of
Trade and Commerce*

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1925

NOTE ON THE FRUIT-GROWING INDUSTRY OF CANADA

All kinds of fruit are successfully grown in all except the colder parts of the Dominion of Canada; but fruit growing as a commercial industry is limited to certain well defined districts, these being principally the Annapolis Valley in Nova Scotia, the southern half of Ontario and the valleys of British Columbia. The Valley of the St. John River in New Brunswick produces apples on a commercial scale, and there are parts of Quebec, notably in the counties of Rouville, Huntingdon, Chateauguay, Jacques Cartier, and Stanstead, where apple-growing is successfully practised on a commercial scale.

In Nova Scotia the apple-growing industry has assumed great importance, the bulk of the crop being annually exported to Great Britain. There are records of the growth of apples in Acadia from 1635. The Census of 1698 showed that at Port Royal alone there were 1,584 apple trees distributed amongst 54 families, of whom many had orchards of from 75 to 100 trees. At Beaubassin in 1698 the Census showed 32 acres in fruit trees. The first apples exported from the province are said to have been shipped by sailing vessel from Halifax to Liverpool in 1849, the price realized being \$2 per barrel. In 1856 a shipment of 700 barrels was made by schooner to Boston, U.S.A., the price realized being \$2.75 per barrel. The first experimental commercial shipments of apples to England from the Annapolis Valley were made in December, 1861, but proved disappointing. The first steamer to carry apples direct from Annapolis Royal to London was the "Neptune", which sailed on April 2, 1881. The shipment consisted of 6,800 barrels, and arrived in London in 14 days. This venture was fairly successful, and from that time the business has continued to increase in volume. Up to 1890, however, the production of apples in Nova Scotia rarely exceeded 100,000 barrels, but after that date there was a pronounced increase in acreage and production, and in 1909 the production reached a million barrels. A record crop of about 1,900,000 barrels was produced in 1911, when 1,734,876 barrels were marketed, and further records were made in 1919 when the gross crop exceeded two million barrels, and in 1922, when 1,891,850 barrels were packed and sold from the Annapolis Valley and adjacent valleys, which comprise a district of about 100 miles long by from six to eleven miles wide.

There are records to show that in 1663 apples were being produced in the province of Quebec, and it is here that the celebrated Fameuse apple is thought to have originated. The capabilities of this province for the production of apples of the finest appearance and best quality are very great; but at present there are not sufficient apples grown for the local demand, and large quantities are therefore annually imported.

In Ontario, where the commercial production of all descriptions of fruit capable of cultivation in Canada has reached its highest development, apples have been grown from the middle of the eighteenth century; but commercial orcharding has developed only within the past 50 or 60 years, and was only made possible when the building of the railways permitted trees and fruit to be transported rapidly. The great winter apple districts include the border of Lake Ontario extending back 30 miles and more from the Lake, the shores of Lake Huron and Georgian Bay, several miles in depth and the southwestern part of the province. Farther east and north, and including an area east of the Lake Huron District, there are large areas of land where the hardier varieties of apples are most suitable. In the Niagara fruit-growing district, besides apples, peaches, pears, plums and cherries, small fruits and grapes are produced upon a large scale.

In British Columbia commercial fruit growing is of comparatively recent origin; but the development of commercial orcharding has been very rapid, especially during the last ten years. The first apple trees were planted about 1850, but not until after the completion of the Canadian Pacific Railway in 1886 were there many trees planted for commercial purposes. The Census of 1891 gave the area devoted to all kinds of fruit as 6,500 acres; in 1921 the Census showed a total fruit acreage in the province of 43,569 acres. The most noted fruit district is that of the Okanagan Valley, where are some of the finest orchards in the province and in the Dominion. The boxed apples from British Columbia are found in season on all the important markets in Great Britain and Europe. Pears, plums, peaches, apricots, cherries and small fruits are grown on a large scale.

The Fruit Marks Act first passed by the Dominion Parliament in 1901 made the grading of commercial apples compulsory. In 1923 all previous legislation of this kind was replaced by the Fruit Act (13-14, Geo. V, c. 15), which provides for government inspection, imposes penalties for dishonest packing and defines the grades under which the different descriptions of fruit shall be sold.

ANNUAL REPORT ON FRUIT STATISTICS, 1924

For each of the years 1919 to 1923 the Dominion Bureau of Statistics and the Fruit Branch of the Dominion Department of Agriculture have collected and published in co-operation statistics (1) of the quantities and values of commercial apples produced in Canada, and (2) of the varieties and values of fruit trees, bushes and plants sold by nurserymen in Canada. Last year, in a first Report of the kind, were published co-operatively in the same way statistics for the years 1920 to 1923 of all descriptions of fruit produced on a commercial scale in Canada. The present Report brings these figures up to date by inclusion of the year 1924, and by giving statistics of the numbers and values of nursery fruit stock sold during the year ended May 31, 1924.

PRODUCTION AND VALUE OF FRUIT, 1924.

For the year 1924, as shown in Table I, the production of commercial fruits in Canada, with the corresponding figures for 1923 in brackets, was as follows: Apples 3,247,270 barrels, value \$18,777,667, average \$5.78 per barrel (4,493,183 brls., value \$24,489,350; \$5.45); pears 196,809 bushels, value \$471,924, average \$2.40 (227,335 bushels, \$550,587; \$2.42); plums and prunes 238,978 bushels, value \$504,460, average \$2.11 (348,482 bushels, \$696,964; \$2); peaches 154,384 bushels, value \$404,663, average \$2.62 (403,660 bushels, \$916,050, \$2.27); cherries 100,340 bushels, value \$337,775, average \$3.36 (203,125 bushels, \$722,440, \$3.56); strawberries 6,532,000 quarts, value \$1,398,910, average 21 cents (8,652,200 quarts, \$1,513,230; 17 cents); raspberries 2,000,450 quarts, value \$401,012, average 20 cents (4,496,840 quarts, \$1,044,001; 23 cents); other berries 2,532,000 quarts, value \$500,020, average 19 cents (2,527,700 quarts, \$494,691, 20 cents); grapes 24,500,000 lb., value \$1,470,000, average 6 cents (42,185,077 lb., \$2,742,030; 6 cents). The total value of these fruits is \$24,266,431 for 1924, as compared with \$33,169,343 in 1923; the decrease is due principally to smaller quantities. For 1924 the figures are subject to revision after the conclusion of the season.

TREE NURSERY INDUSTRY IN CANADA

The first Canadian commercial nursery was established near Fonthill, Ont., in 1837, and was followed within five years by the establishment of a nursery by a Rochester, N.Y., firm in Toronto. Since that time the industry has steadily spread as the country has developed, until to-day there are approximately 170 firms growing or dealing in nursery stock of all kinds, including fruit trees.

Canadian nurserymen have made great scientific advancement in the type and hardiness of stock used for grafting and budding purposes, which has greatly enhanced the resistance of the trees against winter injury, an important factor in Canadian orcharding.

The great problem of mixing varieties, which has been a source of worry to nurserymen in the past, has been overcome by the recent investigations carried out by the Dominion Experimental Stations. These have revealed a system whereby it is possible to identify the different varieties in the nursery row. Identification of the varieties of apples has proved possible of accomplishment by any person after a few months' study of the varietal characteristics, while other fruits under study, such as peaches and pears, are proving equally easy to identify.

This inspection service has been accepted by the Canadian Nurserymen's Association, and will be adopted by most firms as soon as it can be inaugurated, which will allow nursery stock to be sold guaranteed true to name.

Nurserymen as well as the Fruit industry have been greatly handicapped in the development of their industry owing to the large number of indifferent and useless varieties grown. With the present enlightened knowledge of market requirements the tendency is to limit the planting of fruit trees to a few of the best commercial kinds suited to the respective districts. The statistics now annually collected as to the number of varieties actually sold are proving especially useful in this connection.

SALES OF NURSERY FRUIT STOCK

The Dominion Bureau of Statistics issued, on December 30, 1924, a preliminary report showing the total quantities and values of nursery fruit stock sold in Canada during the twelve months ended May 31, 1924, as compared with the corresponding period ended May 31, 1923. These statistics are compiled from the returns of fruit nurserymen in Canada, in number 58 for the year 1923-24 and 67 for the year 1922-23. For each of the provinces, except British Columbia, the number of returns is identical for the two years; but in British Columbia for the year 1923-24 the numbers are 13, as against 22 in 1922-23, the decreased number in 1924 being chiefly due to the fact that a number of the smaller concerns have gone out of business.

Table II shows, by provinces, the quantities and values of the nursery fruit stock sold in Canada for each of the two years 1923 and 1924. According to this table the total sales for the year ended May 31, 1924, amounted in value to \$350,425, as compared with \$366,229 in 1923. Of apple trees 331,917 were sold to the value of \$144,850, comprising 47,351 early apples, value \$21,227, 66,774 fall apples, value \$30,728, 203,608 winter apples, value \$87,148 and 14,184 crab apples, value \$5,747. The number and value of other descriptions of fruit trees, bushes and plants were as follows: TREES: Pears 42,889, \$26,920; plums 57,133 \$34,396; peaches 74,302, \$20,264; cherries 55,540, \$33,063; apricots 2,259, \$904; quinces 104, \$61. BUSHES: Currants 129,270, \$11,511; grapes 293,018; \$27,714; gooseberries 67,369, \$9,163. PLANTS: raspberries 513,078, \$20,726; blackberries 29,851, \$1,093; loganberries 1,805, \$258; strawberries 2,212,645, \$19,503. The average wholesale prices per unit are in cents as follows, last year's average prices being given within brackets: Apples 44 (42); pears 63 (55); plums 60 (62); peaches 27 (28); cherries 59 (62); apricots 40; quinces 58 (33); currants 9 (10); grapes 9 (9); gooseberries 14 (12); raspberries 4 (3); blackberries 4 (5); loganberries 14 (6); strawberries per 100, 88 (85).

Table III shows, by provinces, the names of the principal varieties of each description of fruit stock sold for the year 1924.

IMPORTS AND EXPORTS OF FRUIT

Tables IV and V show the Canadian imports from, and exports to, the United Kingdom, the United States and all countries for each of the fiscal years ended March 31, 1923 and 1924.

Dominion Bureau of Statistics,
Ottawa, March 12, 1925.
