THE FRUIT-GROWING INDUSTRY OF CANADA

All kinds of fruit are successfully grown in all except the colder parts of the Dominion of Canada; but fruit-growing as a commercial industry is limited to rather well-defined districts, these being principally the Annapolis Valley in Nova Scotia, the southern half of Ontario, and the valleys of British Columbia. The valley of the Saint John river in New Brunswick produces apples on a commercial scale, and there are parts of Quebec, notably in the counties of Rouville, Huntingdon, Chateauguay, Jacques Cartier and Stanstead, where apple-growing is successfully practised on a commercial scale.

In Nova Scotia, the apple-growing industry has assumed great importance, the bulk of the crop being annually exported to Great Britain. There are records of the growth of apples in Acadia from 1635. The Census of 1698 showed that at Port Royal alone there were 1,584 apple trees distributed amongst 54 families of whom many had orchards of from 75 to 100 trees. At Beaubassin in 1698 the Census showed 32 acres in fruit trees. The first apples exported from the province are said to have been shipped in sailing vessels from Halifax to Liverpool in 1849, the price realized being \$2 per barrel. In 1856 a shipment of 700 barrels was made by schooner to Boston, U.S.A., the price realized being \$2.75 per barrel. The first experimental commercial shipments of apples to England from the Annapolis Valley were made in December, 1861, but proved disappointing. The first steamer to carry apples direct from Annapolis Royal to London was the "Neptune", which sailed on April 2, 1881. The shipment consisted of 6,800 barrels and arrived in London in 14 days. This venture was fairly successful, and from that time the business has continued to increase in volume. Up to 1890, however, the production of apples in Nova Scotia rarely exceeded 100,000 barrels, but after that date there was a pronounced increase in acreage and production, and in 1909 the production reached a million barrels. A record crop of about 1,900,000 barrels was produced in 1911, when 1,734,876 barrels were marketed, and further records were made in 1919, when the gross crop exceeded two million barrels, and in 1922, when 1,891,850 barrels were packed and sold from the Annapolis Valley, and adjacent valleys, which comprise a district of about 100 miles long by from six to eleven miles wide.

There are records to show that in 1663 apples were being produced in the province of Quebec and it is here that the celebrated Fameuse apple is thought to have originated. The capabilities of this province for the production of apples of the finest appearance and best quality are very great, but at present there are not sufficient apples grown for the local demand, and large quantities are therefore imported annually.

In Ontario, where the commercial production of all descriptions of fruit that can be successfully cultivated in Canada has reached its highest development, apples have been grown from the middle of the eighteenth century; commercial orcharding has developed only within the past 50 or 60 years, and was only made possible when the building of the railways permitted trees and fruits to be transported rapidly. The great winter apple districts include the border of Lake Ontario, extending back 30 miles and more from the Lake, the shores of Lake Huron and Georgian Bay, several miles in depth, and the southwestern part of the province. Farther east and north, and including an area east of the Lake Huron district there are large areas of land where the hardier varieties of apples are most suitable. In the Niagara fruit-growing district, besides apples, peaches, pears, plums and cherries, small fruits and grapes are produced upon a large scale.

In British Columbia commercial fruit-growing is of comparatively recent origin, but the development of commercial orcharding has been very rapid, especially during the last ten years. The first apple trees were planted about 1850, but not until after the completion of the Canadian Pacific Railway in 1886 were there many trees planted for commercial purposes. The Census of 1891 gave the area devoted to all kinds of fruit as 6,500 acres; in 1921 the Census showed a total fruit acreage in the province of 43,669 acres. The most noted fruit district is that of the Okanagan Valley, where are some of the finest orchards in the Dominion. The boxed apples from British Columbia are found in season on all the important markets in Great Britain and on the Continent. Pears, plums, peaches, apricots, cherries and small fruits are grown on a large scale.

The Fruit Marks Act, first passed by the Dominion Parliament in 1901, made the grading of commercial apples compulsory. This legislation has been amended from time to time and is now incorporated in the Fruit, Vegetables and Honey Act, 1935, which provides for the grading, packaging and inspection of all fruits of all kinds grown in Canada. It also provides for the prevention of unfair practices in the handling and selling of such products.

T. W. GRINDLEY, Ph.D.

ANNUAL STATISTICS OF FRUIT AND FLORICULTURE, 1935

The Dominion Bureau of Statistics issues reports on (1) the estimated production and value of commercial fruits in 1935, as compared with the finally revised estimate of 1934; (2) the sales of nursery fruit stock for the year ended May 31, 1935, as compared with 1934; and (3) statistics of floriculture and decorative plants for the year ended May 31, 1935. In conformity with the valuations of the products of other branches of the agricultural industry, valuations have been based on the prices reported as received by growers at shipping points.

THE 1935 FRUIT SEASON

As the season opened, effects of the exceptionally severe winter of 1933-34 continued to show up in Eastern Canada. Many trees which had been weakened at that time failed to leaf out in the spring of 1935. Cool, dry and backward weather prevailed during early spring. This retarded the development of fruit crops in all sections of Canada.

Following a late start, all fruits came along rapidly under the influence of abundant rains in early June. Spraying was interfered with to some extent but on the whole, pests were well controlled.

Strawberries yielded a bumper crop, the largest on record for the country. Raspberry production was well above average, exceeding that of any previous year with the single exception of 1932.

During late summer, hot dry weather interfered with the sizing of tree fruits and grapes. Peaches and plums were most seriously affected. Despite this the peach crop was a heavy one although the proportion of No. 1's was small on account of lack of size. Early fall rains came in time to improve the size of the later fruits and to leave the soil well supplied with moisture.

Apples generally were above average in colour and quality. The crop exceeded that of the previous year and the five year average, 1930-34. British Columbia showed a reduction but other provinces more than made up the deficiency. Prices were considerably better than in 1934. A severe frost in October caused heavy damage to apples in British Columbia and many apples had to be hurried to market at low prices to avoid further loss from wastage.

A feature of the Ontario season was the large export movement of plums which arrived on the British market in good condition, were well received by the trade, and brought good prices to the growers. Frost damage to Ontario grapes reduced the quality and caused shattering of the bunches.

Production of practically all fruits in Canada during 1935 was in excess of that for the previous year. Prices were also better and the gross value of the crop, estimated at \$18,561,200 was well in excess of the 1934 estimate of \$15,759,500.

For the apple crop the preliminary estimate of the 1935 production is 4,432,700 barrels, valued at \$12,452,100 and having an average value per barrel of \$2.89. For 1934, revised estimates show the production as 4,257,400 barrels, the gross value \$9,182,900 and the average net value \$2.15.

Strawberries, second in importance amongst Canadian fruits showed an estimated crop for 1935 of 26,199,000 quarts valued at \$2,249,900, or an average of 8½ cents per quart. Corresponding figures for 1934 are 20,239,000 quarts valued at \$2,070,100 or an average of 10 cents per quart.

Of the other fruits, estimated commercial production and value for 1935 are as follows with the comparative figures for 1934 in brackets: Pears, 355,200 bushels, \$506,100, \$1.42 per bushel (440,800, \$592,900, \$1.34); plums and prunes, 225,300 bushels, \$306,400, \$1.36 per bushel (240,200, \$369,500, \$1.53); peaches, 613,600 bushels, \$888,600, \$1.44 per bushel (443,800, \$1,033,600, \$2.32); apricots, 44,800 bushels, \$114,600, \$2.55 (100,800, \$244,900, \$2.43); cherries, 202,200 bushels, \$529,500, \$2.62 per bushel (194,700, \$475,100, \$2.34); raspberries, 7,169,000 quarts, \$903,500, 12.6 cents per quart (5,835,200, \$824,300, 14 cents); grapes, 39,350,000 pounds, \$610,500, 1½ cents per pound (48,565,000, \$984,200, 2 cents).

Total values of the fruit crop in the different provinces are as follows: Nova Scotia, \$4,354,300 (\$3,206,000); New Brunswick, \$203,100 (\$159,500); Quebec, \$1,743,000 (\$1,257,000); Ontario, \$5,120,000 (\$4,734,300); British Columbia, \$7,139,000 (\$6,503,900).

Table 1 (page 7) gives by provinces, the production and shipping point value of commercial fruits for 1934 and 1935 as shown by the preliminary estimates for 1935 and the final estimates for 1934.

SALES OF NURSERY FRUIT STOCK

Tables II and III show the total quantities and values of nursery fruit stock sold by nurserymen in Canada during the year ended May 31, 1935, as compared with the corresponding period ended May 31, 1934. The statistics for 1934-35 are compiled from 39 returns, as compared with 45 returns for 1933-34 and 47 returns for 1932-33.

Table II gives, by provinces, the quantities and values of nursery fruit stock sold in Canada for each of the two years.

Table III shows, by provinces, the principal varieties of fruit stock sold for the year 1935.

The total sales for the year ended May 31, 1935, amounted to \$308,612 as compared with \$245,352 in 1933-34. There were 354,920 apple trees sold valued at \$127,681, comprising 62,929 early apples, value \$24,156; 72,212 fall apples, value \$27,024; 209,873 winter apples, value \$72,970; and 9,906 crab apples, \$3,531. The numbers and values of other descriptions of fruit trees, bushes and plants sold in 1934-35 were as follows: Trees—Peaches, 112,990, \$26,496; pears, 60,497, \$26,762; plums, 56,740, \$23,472; cherries, 57,758, \$26,276; apricots, 4,169, \$988; nectarines, 46, \$23; quinces, 87, \$44. Bushes—Blackberries, 43,062, \$1,810; currants, 60,013, \$6,147; gooseberries, 31,529, \$4,361; grapes, 168,724, \$17,257; raspberries, 948,618, \$33,246; loganberries, 3,304, \$234; strawberries, 1,683,451, \$13,815. The average wholesale prices per unit were in cents as follows, with the average prices of the previous year in brackets: Apples, 36 (33); peaches, 23 (23); pears, 44 (43); plums, 41 (39); cherries, 45 (43); apricots, 24 (22); nectarines, 50 (50); quinces, 50 (50); blackberries, 4 (3); currants, 10 (9); gooseberries, 14 (13); grapes, 10 (10); raspberries, 4 (3); loganberries, 7 (14); strawberries, per 100, 82 (82).

FLORICULTURE AND DECORATIVE PLANTS

A schedule for the collection of annual statistics of floriculture and decorative plants was prepared by the Bureau in consultation with leading floricultural experts, including the late Dr. W. T. Macoun, Dominion Horticulturist, and representatives of the Canadian Horticultural Council and of the Canadian Florists' and Gardeners' Association. This schedule was circulated as widely as possible amongst wholesale florists and growers of flowers and decorative plants upon a commercial scale. It called for the quantities sold and the values

of (1) outdoor ornamental trees, shrubs and plants; (2) indoor ornamental plants, ferns and flowers; (3) flowering bulbs; and (4) cut flowers. The inquiry was limited to sales within the year ended May 31, 1935, of products grown in Canada, and applied only to wholesale commercial production and wholesale prices and values. It did not include trees sold for afforestation purposes, or plants and flowers produced by small growers and sold in market stalls in towns and cities.

In response to the Bureau's inquiry, 166 completed schedules were returned, as compared with 191 for 1934-35. They included 26 returns from Quebec and the Maritime Provinces, 82 from Ontario, 25 from the Prairie Provinces and 33 from British Columbia. It is recognized that this number comprises but a small portion of those engaged in the industry. However, the returns represent a large proportion of the leading growers and give some indication of the extent of the industry.

Rose Trees and Rose Bushes (Class 1).—Sales of rose trees and bushes for outdoor planting numbered 411,482 and were valued at \$74,045, an average price per tree or bush of 18 cents.

Ornamental Trees, Evergreen, except trees sold for afforestation (Class 2).—Number 76,861; value \$70,602; average price 92 cents.

Ornamental Trees, Deciduous, except trees sold for afforestation (Class 3).—Number 121,113; value \$42,882; average price 35 cents.

Shrubs for Outdoor Planting (Class 4).—Number 501,543; value \$69,608; average price 14 cents.

Hardy Climbing Vines (Class 5).—Number 3,105; value \$621; average price 20 cents.

Herbaceous Perennial Plants (Class 6).—Number 305,918; value \$31,368; average price 10 cents.

Herbaceous Biennial Plants (Class 7).—Number 29,099; value \$2,241; average price 8 cents.

Bedding Plants (Class 8).—The plants reported as sold in pots or other receptacles for outdoor transplanting numbered 2,499,792 and were valued at \$75,923. Of the four varieties included in this category, geraniums were the most popular, numbering 328,187 valued at \$32,928, an average price of 10 cents each. Petunias numbered 173,495 and were valued at \$5,862; begonias 45,541, \$5,515; and cannas 35,953, \$3,993.

Flowering Plants (Class 9).—Plants sold in pots or other receptacles for greenhouse or indoor use numbered 324,957 and were valued at \$117,095. Of the 10 varieties, the most popular was geranium, numbering 44,427, valued at \$5,256. The numbers and values of the others were as follows: Lilies (potted), 41,764, \$19,616; cyclamen 40,359, \$17,028; begonia 27,962, \$8,940; cineraria 26,620, \$7,006; hydrangea 24,566, \$15,229; azalea 20,928, \$21,390; primula 16,685, \$3,924; roses (potted) 14,111, \$7,175.

Decorative Plants (Class 10).—Plants sold in pots for greenhouse or indoor use numbered 107,210 and were valued at \$39,683. These comprise ferns numbering 77,777, valued at \$29,052; dracaena 10,018, \$1,522; ivy 4,938, \$496; palms 2,277, \$2,927; sansevierias 1,941, \$734; rubber plants 785, \$431; and aspidistra 704, \$742.

Flowering Bulbs (Class 11).—Flowering bulbs of all kinds sold as bulbs, including bulbs dormant and forced in Canada, numbered 1,885,174 and were valued at \$42,314, an average of 2 cents each.

Cut Flowers Grown Indoors (Class 12).—Of the twenty named varieties of cut flowers, the number reported as sold was 21,589,614 valued at \$1,024,400. The unclassified varieties numbered 2,257,559, valued at \$81,427. Among the cut flowers, roses, carnations, chrysanthemums, daffodils, iris, tulips, and sweet peas are apparently the most popular. The rose naturally predominates, the number of blooms reported as sold being 8,571,114 valued at \$566,477, an average of \$6.61 per 100 blooms; carnations 2,950,128, \$113,387; chrysanthemums 1,608,161, \$77,808; daffodils 1,306,498, \$35,996; iris 1,074,327, \$52,952; tulips 992,069, \$34,900; and sweet peas 860,132, \$8,673. Of the remaining flowers the number reported as sold range from 396,923, valued at \$17,096 for antirrhinums down to 20,650, valued at \$386 for larkspur.

Other Varieties (Class 13).—Any other varieties, including Class 12, grown outdoors, viz., hyacinths, pansies, peonies, gladioli, cannas, dahlias, zinnias, etc., were valued at \$16,956.

Total Value.—The total value of the floricultural and decorative plant production of Canada during the year ended May 31, 1935 was \$1,689,165, comprising \$74,045 for outdoor roses; \$217,322 for other outdoor trees, shrubs and plants; \$117,095 for specific indoor plants; \$39,683 for other indoor plants; \$42,314 for flowering bulbs; and \$1,105,827 for cut flowers. The cut flower industry exceeds the total of all the other categories, both in volume and value, the value representing 65 per cent of the total.

GREENHOUSES AND HOTHOUSES

In connection with the Census of 1931, the agricultural schedule provided for the collection of data respecting greenhouse and hothouse establishments, including (1) the total area in square feet under glass on June 1, 1931, i.e., the area covered by greenhouse, sashes and frames; (2) the acreage not under glass; (3) the amount received from sales of flowers, flowering plants, etc., during 1930; and (4) the amount received from the sale of vegetables and vegetable plants during 1930. The data collected by this means are shown in the Annual Statistics of Fruit and Floriculture for 1934.

I.—Production and Shipping Point Value of Fruits in Canada, by Provinces, 1935, as compared with 1934
