## REPORT ON THE FUR FARMS OF CANADA, 1944

### P R E F A C E

The Dominion Bureau of Statistics, with the co-operation of the Provincial Game Departments, takes annually a postal census of fur farms. The classification "fur farm" is applied to property where fur-bearing animals are raised, whether the property is one devoted solely to fur farming, or one which is operated as a branch of a general farm.

In all provinces, excepting Prince Edward Island and New Brunswick, the fur farms are operated under authority of provincial licence and lists of licensees are, each year, furnished to the Dominion Bureau by the Provincial Game Departments. In Prince Edward Island and New Brunswick licences in connection with fur farming are not required and for these provinces the Bureau has built up lists which, although inclusive of all the larger farms, are probably incomplete with regard to properties where not more than one or two pairs of fur-bearing animals are kept. In the decennial census of 1941 a special inquiry concerning fur farming operations was added to the agricultural schedule and from these records has been obtained information which has been employed in the revision of the Bureau's permanent lists of fur farmers in the two provinces mentioned.

With three provinces, viz., Manitoba, Saskatchewan and British Columbia, the Bureau has a comprehensive arrangement for co-operation. Under this arrangement, the annual schedules are printed by the Dominion Bureau. These are, however, distributed and the returns collected by the Provincial Departments. The returns are then forwarded to the Dominion Bureau for compilation and the resulting statistics are used as desired by Dominion and Provincial authorities. A similar arrangement has been made with Quebec, except that for that province the statistics are compiled and summarized by the Provincial authorities. Duplicate inquiries to fur farmers are thus avoided and uniform statistics are assured.

Statistics on the general fur production of Canada, based on statements furnished by the Provincial Game Departments, are also issued annually by the Bureau. Raw furs are the chief commercial product of the wild life of Canada, and as such represent the only economic return from a large area of the Dominion. The preliminary estimate of the total value of the raw fur production of Canada for the season 1944-45 was \$30,646,064; comprising the value of pelts of fur-bearing animals taken by trappers, and pelts of animals sold from fur farms, the value of the latter constituting approximately 31 per cent of the whole. A table is included in the present volume which shows the total raw fur production of Canada, thus combined, for the seasons 1943-44 and 1944-45.

SUMMARY

There was an apparent tendency for fur farmers to enlarge their operations during 1944. Although the number of farms decreased to 6,396 from 6,973 in 1943, there was an increase in the proportion having 20 or more animals. The total capital value of fur farms was \$19,389,783, an increase of two million dollars over 1943 and on those farms there were 248,205 fur bearing animals which brought in a revenue from sales of live animals and pelts of \$9,382,103.

Number of Fur Farms.— The decrease from 1943 in the number of farms operating was 577 or 8.3 per cent. The Maritime Provinces recorded the greatest decline, being 21.1 per cent from the previous year, while the two most westerly provinces were only slightly less than in 1943 or 1.6 per cent. The number of farms reporting foxes was 4,467 compared with 5,024 in 1943, while mink farms numbered 2,262 compared with 2,266. There was a marked decrease in the number of fox farms having 1 to 19 foxes but an increase in those having 20 and over. Farms reporting 40 mink and over increased by 26 per cent. There was a general decrease by provinces in the number reporting foxes but an increase in Quebec, Saskatchewan and Alberta for those reporting mink. Farms having coyote, fisher, marten, raccoon and skunk are small in number and these animals have been grouped under the heading "other fur bearing animals" in the detailed tables by provinces.

<sup>1</sup>/ Chinchilla are reported in Ontario but no figures are available for publication.

<sup>2</sup>/ A few small farms operate in Yukon Territory but no figures are available for publication.

The chart given below illustrates the course of the industry in the years 1926 to 1944 with regard to number of farms and value of property.

Number of Animals - The numbers of fur-bearing animals on farms at the end of the year 1944 were 102,810 foxes, 144,166 mink and 1,229 other kinds of fur-bearers. The number of foxes retained on farms increased by 4 per cent and mink by 21 per cent. New type foxes increased by 35 per cent. These are classified in the tables as "white marked" and "platinum". Under the general heading of platinum fox are included platinum, platinum silver, pearl platinum, pearlatina and glacier blue foxes.

Revenue - The amount of revenue from the sale of live animals and pelts, namely \$9,382,103, was a decrease of \$463,902 from the previous year or 4.7 per cent. To the total amount the sale of foxes and fox pelts contributed \$4,944,378 or 52 per cent and that of mink and mink pelts \$4,404,773 or 47 per cent. Average prices for silver, platinum, white marked and red fox pelts were lower than in the previous year but standard mink pelts were higher.

Capital Value - The total capital value of fur farms rose from \$17,403,249 in 1943 to \$19,389,783 in 1944, an increase of 11 per cent which was due to the larger numbers of the higher priced new type foxes and mink. Among the provinces, Quebec had the greatest value with over \$4 million, Ontario was next with nearly \$4 million, Alberta third with \$3 million and Manitoba fourth with \$2½ million. The revenue from the sale of live animals and pelts placed Ontario first, Quebec second, Alberta third, and Manitoba fourth.

The fur farming industry is reviewed in the following tables which cover number, value and average value of animals sold and pelts sold and the number, value, and average value of animals on farms, the number of farms, capital and revenue for the years 1939 to 1944. The general tables giving detailed information concerning the various kinds of fur-bearing animals, by provinces, and principal statistics by counties and districts in 1944, is followed by comparative statistics for exports and imports of furs for the years 1942, 1943 and 1944.
