Statistics of the production of concentrated milk in Canada in August, 1930, are based on the returns of the 29 firms which manufactured any of the various items during the month.

Production for August, 1930, shows a decrease from the preceding month of three million pounds, nearly all items sharing in the decrease, the exceptions being condensed milk, cream powder and buttermilk powder, which show slight increases. Production was lower also than in August, 1929 by about 300,000 pounds. The total amount of production in August, 1930, for all items, was 10,972,960 pounds, compared with 13,994,973 pounds in July, and 11,311,057 pounds in August, 1929. The cumulative production for the eight months ended August 31, 1930, was 81,868,584 pounds, or an average per month of 10,233,573 pounds.

The exports of concentrated milk were higher for condensed milk and evaporated milk and lower for milk powder. The imports of concentrated milk are of little importance, amounting in August to only 9,261 pounds of condensed milk and 4,673 pounds of casein. Concentrated milk products in cold storage warehouses at date of September 1, were slightly higher than at date of August 1.

The following tables give statistics of production, imports and exports and cold storage holdings.
