CONCENTRATED MILK PRODUCTION, CANADA, APRIL, 1933.

Statistics of the production of concentrated milk in Canada in April, 1933, are based on returns from the 29 firms whose factories manufactured during the month any of the various items included under the general classification of "concentrated milk", i.e., condensed milk, evaporated milk, milk powder, or similar products.

Production.— The production shown by the combined total of all items in April, 1933, was 7,214,503 pounds, compared with 5,031,005 pounds in the preceding month and 7,817,631 pounds in April, 1932. Evaporated milk (case goods), is the principal item, with a total of 4,770,108 pounds, an increase over the preceding month of 80 per cent. In the period January 1 to April 30 of the present year, the production of evaporated milk (case goods) amounted to 11,267,135 pounds. Nearly the whole production of evaporated milk is under the classification of "case goods", only a small part of the total output being recorded as "bulk goods". Condensed milk varies from month to month in the proportion of case and bulk goods, but the total output of case goods for the first four months of the year was about a third larger than that of bulk goods.

Foreign Trade.— The quantity of evaporated milk exported in April last was nearly three times as large as the export of a year ago, but the exports of condensed milk and milk powder, were less. The imports of concentrated milk are comparatively small, the total in April amounting to only 5,516 pounds. The trade tables do not make distinction between case goods and bulk goods in the items of condensed and evaporated milk.
