REPORT ON THE PRODUCTION OF CONCENTRATED MILK, CANADA,  
JULY, 1935.

Statistics of the production of concentrated milk in Canada in July, 1935, are based on returns from the 31 firms whose factories manufactured during the month any of the various items included in the classification "concentrated milk", i.e., condensed milk, evaporated milk, milk powder, etc.

Production.- The combined production of all items of concentrated milk in July amounted to 11,558,542 pounds, a decrease from the preceding month of 2,498,514 pounds, or 18 per cent, but an increase over July, 1934 of 1,012,596 pounds or 10 per cent. It might be noted that each month of the present year, to date, has shown an increase in production over the corresponding month of 1934. The principal items, in order of quantity of production, in July, were evaporated milk (1,230,260 pounds); skim milk powder (2,290,847 pounds); and condensed milk (834,262 pounds).

Cumulative Production.- The combined production of all items for the seven months ended July 31, 1935, totalled 65,355,255 pounds, compared with 56,047,257 pounds in the corresponding period of 1934. The production for the seven months under review shows an increase over the first seven months of 1934 of 9,307,998 pounds or 17 per cent.

Foreign Trade.- The total export of concentrated milk in July was less than in the corresponding month of 1934 owing to the large decrease in the quantity of evaporated milk exported. Condensed milk and milk powder both show increased exports. The importation of concentrated milk is small, the several items combined totalling only 8,103 pounds.

Storage Holdings.- The quantities held in cold storage warehouses at date of August 1 were greater for all items (excepting cream powder) than at the corresponding date of 1934. Skim milk powder, in particular, was almost double that of a year ago.

The following tables cover production, imports and exports and storage holdings with comparative statistics for the preceding month and for the corresponding month of 1934.
