

CENSUS OF INDUSTRY, 1918.

FISHERIES

Preface.

The volume is issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics and the Government branches having jurisdiction with regard to fisheries throughout Canada. These branches comprise: the Dominion Fisheries Branch of the Department of the Naval Service, which exercises jurisdiction over the sea fisheries and over the inland fisheries of Manitoba, Saskatchewan, Alberta and Yukon Territory; and the Fisheries Branches of Ontario and Quebec, which have jurisdiction over the inland fisheries of their respective provinces. The inland fisheries of the Maritime Provinces are, from a commercial standpoint, comparatively unimportant, but their statistics, as in the case of British Columbia, are collected by the officers of the Dominion Fisheries Branch. The province of British Columbia has a fisheries branch, but it does not engage in independent statistical work.

Under the arrangement above referred to, the statistics of the catch, and of the products marketed in a fresh state or domestically prepared are collected by the local officers of the Fisheries Branches, checked in the Department of the Naval Service, and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules in conformity with those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, salteries, fish houses, etc., the Fisheries Officers assisting in securing an expeditious and accurate return. The grateful acknowledgments of the Bureau are tendered to the officers of the Provincial Governments who co-operated in these arrangements.

R. H. COATS,

Dominion Statistician.

DOMINION BUREAU OF STATISTICS,
OTTAWA, February 24, 1920.

Note on the Canadian Fisheries.

Canada possesses perhaps the most extensive fishing waters in the world, and they contain the principal commercial food fishes in greater abundance than the waters of any other part. The fertility of Canadian waters is indicated by the fact that the entire catch of salmon, lobsters, herring, mackerel, and sardines, nearly all the haddock, and many of the cod, hake, and pollock landed are taken within ten or twelve miles from shore.

The coast line of the Atlantic provinces from Grand Manan to Labrador, not including the lesser bays and indentations, measures over 5,000 miles, whilst the sea areas to which this forms the natural basin embrace: the Bay of Fundy, 8,000 square miles in extent; the gulf of St. Lawrence, fully ten times that size; and other ocean waters aggregating not less than 200,000 square miles, or over four-fifths of the fishing grounds of the North Atlantic. In addition there are 15,000 square miles of inshore waters, entirely controlled by the Dominion. Large as are these areas, they represent only a part of the fishing grounds of Canada. Hudson bay, with a shore 6,000 miles in length, is greater than the Mediterranean; the Pacific coast of the Dominion measures over 7,000 miles long, and is exceptionally well sheltered for fishermen; whilst throughout the interior is a series of lakes which together cover 220,000 square miles, or more than half the fresh water of the Globe, Canada's share of the great lakes of the St. Lawrence basin alone amounting to 72,700 square miles.

Of even greater importance is the abundance and general excellence of the product. The cod and the salmon have long disputed the primacy among these, though in recent years the heavy pack and the high price of lobsters has sometimes sent cod to third place.

The fisheries of the Atlantic coast may be divided into two distinct classes; the deep-sea, and the inshore or coastal fisheries. Deep-sea fishing is pursued in vessels of from 40 to 100 tons, carrying crews of from twelve to twenty men, who fish with hook and line, also in steam vessels of approximately 150 feet in length known as steam trawlers. The bait used is chiefly herring, squid and capelin, and the fish taken are principally cod, haddock, hake, pollock and halibut. The inshore or coastal fishery is carried on in small boats, usually motor driven, with crews of from two to three men, and in a class of small vessels with crews of from four to seven men. The means of capture employed by boat fishermen are gill nets and hooks and lines, both hand-lines and trawls; whilst from the shore are operated trap-nets, haul seines and weirs. The commercial food fishes taken inshore are the cod, hake, haddock, pollock, halibut, herring, mackerel, alewife, shad, smelt, flounder, and sardine. The most extensive lobster fishery in the world is carried on along the whole of the eastern shore of Canada, whilst excellent oyster beds exist in many parts of the gulf of the St. Lawrence, notably off Prince Edward Island. The salmon fishery is the predominant one on the Pacific coast, but a very extensive halibut fishery is carried on in the northern waters of British Columbia, in large well-equipped steamers and vessels. The method of capture is by trawling, dories being used for setting and hauling the lines, as in the Atlantic deep-sea fishery. Herring are in great abundance on the Pacific coast, and provide a plentiful supply of bait for the halibut fishery. In the inland lake fisheries, the various means of capture in use are gill nets, pound nets, seines, and hooks and lines.

FISHERIES, 1918.

Introduction.

The statistics of this report, for the calendar year 1918, are presented in three parts, preceded by a general summary and a review for previous years. Part I shows fish caught and landed and marketed; Part II deals with agencies of production in (1) primary operations¹ and (2) fish canning and curing; and Part III contains special tables of imports and exports, bounties, etc.

General Summary of Production.

The total value of all fish and fish products marketed in 1918 was \$60,250,544 compared with \$52,312,044 in 1917. The following table shows the quantity caught and landed and the value marketed of the chief commercial fishes for the years 1914-1918.

Table I. Quantity² and Value³ of Chief Commercial Fishes, 1914-1918.

Fishing Conditions and Results, 1918.

Cold stormy weather was prevalent during the first quarter of the year on the Atlantic coast. Indeed, throughout the whole fishing season the weather was not favourable for fishing especially for boat fishing. During August and September fishing, both inshore and offshore, was greatly interfered with by an enemy submarine which sank a steam trawler and several sailing vessels. Lastly, the epidemic of influenza which spread over the country in the fall of 1918 caused many fishing vessels to be tied up in harbour, while it lasted.

The total catch of the Lunenburg bank fishing fleet was slightly less than that in the previous year, owing to the loss of vessels and the general interruption of operations by the undersea craft. The haddock catch of Nova Scotia, the chief producer of these fish, was as a whole, less. The decrease was mainly due to the fact that at Ingonis, where haddock are caught in traps, the fish failed to appear as abundantly as usual in the spring.

The sardine fishery of the Bay of Fundy resulted in a large catch, for which high prices were paid to the fishermen. The sudden ending of hostilities in Europe, however, caused a serious drop in both the demand for and the price of the canned product, and much of the pack was left on hand and disposed of at prices below what was expected when the raw material was purchased.

The decreased lobster catch shown in this report is undoubtedly a serious one, but while lobsters may have been scarce on some of the fishing grounds, to other causes must be attributed the falling off. Protracted spells of stormy weather and abnormal ice conditions prevented fishermen from operating regularly. Then the greatly increased cost of lobster gear deterred fishermen from replacing lost equipment and continuing with as much vigor as in other years.

The fishery in the Great Lakes of Ontario was conducted under normal weather conditions and resulted very satisfactorily as a whole.

In Manitoba the lake Winnipeg summer fishery for whitefish was good, and in lake Winnipegosis and the western lakes of the province about the same quantity was landed as in the previous year.

Weather conditions were very favourable for winter fishing in Saskatchewan during the 1918 season, and notwithstanding the influenza epidemic the fishery in the various districts of the northern part of the province was very successful.

On the Pacific coast the effects of influenza were noticeable, especially in connection with the halibut fishery. The salmon fishery as a whole was prosecuted successfully. While the run of sockeye in the Fraser River district

¹Included with cod.

was small and other varieties less abundant than was expected, all kinds were plentiful in the northern district. In the Vancouver Island district fishing operations on the whole were successful. Salmon were plentiful, especially off the west coast, and a largely increased catch was landed. The halibut fishery by both Canadian and American vessels was looked upon as a very satisfactory one, notwithstanding the influenza epidemic. During the year four steam trawlers operated out of Atlantic ports, and two out of Pacific ports with marked success, and indications point to further developments in this respect. Line fishing too has progressed and larger motor boats of a size capable of fishing on any of the nearer Atlantic banks are taking the place of the old medium sized sailing vessels in many localities.

Fish Caught and Marketed.

The total value of the catch of the sea fisheries of Canada in 1918 to fishermen at the point of landing was \$32,478,584, while the value of the sea fisheries marketed was \$54,231,539¹. The value of the inland fisheries marketed was \$6,019,005².

The following table shows for sea fisheries the quantity and value of the catch and the quantity and value of the fish and fish products marketed, and for inland fisheries the quantity and value of the fish marketed.

	"	90	450
Total value marketed			574,832

¹The value marketed means in the case of fish used fresh, the sum received by the shipper on the coast; in the case of cured or otherwise prepared fish and fish products, it means the sum received by the manufacturer, curer or packer.

²In the case of the inland fish only one value is shown: viz.: "Value marketed" as in these fisheries the fishermen sell direct to the wholesalers so that there is only the one term of value.

Agencies of Production—Capital Equipment, Employees, etc.

CAPITAL

The amount of capital invested in the fisheries of Canada in 1918 was \$60,221,863, compared with \$47,143,125 in 1917. These amounts comprise the capital invested in the primary operations and in canning and curing establishments as shown in the following table:

EMPLOYEES

The total number of persons employed in the fisheries industry in 1918 was 87,070, compared with 95,122 in 1917. The persons employed in the primary operations numbered 68,516 in 1918 and 77,140 in 1917 and in fish canning and curing establishments 18,554 in 1918 and 17,982 in 1917. The total of factory employees in 1918 includes 6,659 females and the total for 1917 includes 4,303 females.

The following table shows the numbers of persons employed in the primary operations on vessels, boats, etc., and in fish canning and curing establishments in the years 1917 and 1918.

4. Number of Persons Employed in the Fisheries Industry, 1917 and 1918.

	Sea Fisheries	
	1917	1918

Other Data with regard to the operations of Fish Canning and Curing Establishments.

LABOUR STATISTICS.

NUMBER OF EMPLOYEES.—The number of salaried employees in factories in 1918 was 615, compared with 636 in 1917, the number of wage-earners 12,558, compared with 12,494 in 1917, and the number classified as contract labourers and piece-workers 5,381, compared with 4,852 in 1917. In British Columbia the majority of the labourers in canning factories are employed under the contract system, the contractor engaging and paying his own help and being himself paid by the factory according to the quantity of fish packed. For con-

CENSUS OF INDUSTRY

tract and piece-workers no details of employment are available other than number so employed and sums paid to them. The statistics of this report relating to employment of wage-earners by months, classification of wage-earners according to weekly wages, etc., are exclusive of contract and piece-workers.

SALARIES AND WAGES.—The total amounts paid to salaried employees was \$699,681 in 1918 and \$668,987 in 1917; to wage-earners \$2,866,761 in 1918 and \$2,808,277 in 1917; and to contract labourers and piece-workers, \$1,073,149 in 1918 and \$739,766 in 1917.

CLASSIFICATION OF EMPLOYEES BY WEEKLY WAGES.—The weekly wage ranged from "under \$3" to "\$25 and over," the largest number of employees being returned for 1918 as receiving "\$15 but under \$20" per week and for 1917 as receiving "\$9 but under \$10." The numbers of employees, male and female, under the several classifications are shown in the following table:—

5. Employees¹ in Fish Canning and Curing Establishments in 1917 and 1918.—Classified by Weekly Wages.

	1917			1918		
	Male	Female	Total	Male	Female	Total
	no.	no.	no.	no.	no.	no.
Under \$3 per week	53	83	136	42	80	122
\$3 but under \$4	381	699	1,080	152	492	644

¹Exclusive of contract and piece-workers.

TIME IN OPERATION AND HOURS WORKED.—In 1918 the average number of hours worked per day in fish canning and curing establishments was nine and the average number per week fifty-five. On an average each of the establishments worked full time 100 days, part time 16 days, and was idle 188 days.

NUMBER OF EMPLOYEES BY MONTHS.—The returns show May and June as the months of largest employment in all establishments. The following table gives the numbers employed in 1917 and 1918 by months:—

6. Employees¹ in Fish Canning and Curing Establishments.—Number on Pay Roll on 15th of each month, 1917 and 1918.

Month	1917			1918		
	Male	Female	Total	Male	Female	Total

December	2,073	282	2,355	1,992	306	2,298

¹ Exclusive of contract and piece-workers.

FUEL USED.

The value of all fuel used in fish canning and curing establishments in 1918 was \$557,710. Bituminous coal to the value of \$349,109, gasoline to the value of \$119,837 and wood to the value of \$48,232 were the principal items of fuel consumption. Small quantities of anthracite and lignite coal, coke, fuel oil and gas are also shown in the returns. The total value of fuel used in 1917 was \$379,339, the principal items being, in the order given, bituminous coal, gasoline, and wood.

POWER EMPLOYED.

In all establishments an increase over 1917 is noted in the number of gas engines, water motors, and electric motors, and a decrease in the number of steam engines, gasoline engines and water wheels. The largest increase is in electric motors (owned and rented) which in 1918 numbered 121 with 1,357 horse power employed, compared with 41 motors and 580 horse power in 1917. The number of boilers in 1918 was returned as 332. No inquiry regarding boilers was contained in the schedule for 1917.

MISCELLANEOUS EXPENSES.

Comprised under the heading of "Miscellaneous expenses" are rent of offices, works and machinery, rent of power, insurance, taxes, use of patents, advertising and travelling expenses, and ordinary repairs to buildings and machinery, the total amount expended being \$2,297,304 in 1918 and \$2,214,555 in 1917.

VALUE OF MATERIALS USED.

The fish used in the preparation of the product of canning and curing establishments in 1918 was valued at \$16,648,265, and the salt, miscellaneous materials and containers at \$4,911,160.

VALUE OF PRODUCT.

The total value of output of all fish canning and curing establishments in 1918 was \$34,007,628. Of this sum fish canned, cured or otherwise prepared was valued at \$28,432,624 and fish marketed fresh at \$5,575,004. The figures are not comparable with those of the previous year, as in the report for 1917 no distinction was made between fish prepared in factories¹ and that prepared by fishermen.

¹The term factory is applied to fish curing establishments which have paid employees, and to all canneries.

Review by Provinces.

The five tables following show by provinces the total value of the fisheries; the quantity caught and landed and the value marketed of the chief commercial fishes; the quantity and value of all fish caught and landed and marketed; the quantity of sea fish taken off shore (by counties); and the capital equipment employed in the primary operations.

Fishing Bounty.

Under authority of "An Act to encourage the development of the Sea Fisheries and the building of Fishing Vessels," the sum of \$160,000 is appropriated annually by the Department and paid to fishermen of the eastern Maritime Provinces. The bounty is distributed under regulations made from time to time by the Governor in Council.

For the year 1918, payment was made on the following basis:—

- To owners of vessels entitled to receive bounty, \$1 per registered ton; payment to the owner of any one vessel not to exceed \$80.
- To vessel fishermen entitled to receive bounty, \$6.25 each.
- To owners of boats measuring not less than 13 feet keel, \$1 per boat.
- To boat fishermen, entitled to receive bounty, \$3.80 each.

There were 14,452 bounty claims received, and 14,440 paid. In the preceding year, 14,532 claims were received, and 14,516 paid. The total amount paid was \$159,675.25, allocated as follows:—

- To 784 vessels and their crews—\$53,298.30.
- To 13,655 boats and their crews—\$106,376.95.

Table (2), Part III, shows in detail the payment of the bounty by counties for the year 1918.

Imports and Exports.

The total fish and fish products imported into Canada for consumption during the fiscal year ended March 31, 1919, were valued at \$3,183,818, and the exports at \$27,137,072. Detailed statistics are given in Part III, Table (3).

3

Historical Review.

The three tables following will afford a review of the fishing industry of Canada for the past several years. In the case of production returns are given by provinces year by year back to 1870. In the case of the number and value of vessels, boats, etc., the review extends to 1880, and in the case of the number of employees to 1895.

12. Historical Review.—(a) Total Value of the Fisheries in the respective Provinces of Canada, from 1870 to 1918.

¹ In addition to these numbers there were also in British Columbia 5,100 workers under the contract system, and 281 piece-workers in other provinces, with regard to which we have no details of employment.

² A number of establishments classified as Lobster Canneries prepare other fish when the lobster season is over, which accounts for the fact that lobster canneries are shown in this table as having employees during every month of the year.

PÊCHERIES.

Préface

Les statistiques contenues dans le présent volume et qui concernent les opérations de pêche de l'année 1918, ont été recueillies dans les premiers mois de 1919.

Ce volume est publié en vertu d'une entente établissant la coopération en matière de statistique, intervenue entre le Bureau Fédéral de la Statistique et les différents services gouvernementaux ayant juridiction sur les pêcheries canadiennes. Ces services comprennent: la Direction des Pêcheries du ministère du Service Naval, qui exerce sa juridiction sur les pêcheries maritimes, ainsi que sur les pêcheries fluviales et lacustres du Manitoba, de la Saskatchewan et de l'Alberta; et les Divisions des Pêcheries des provinces d'Ontario et de Québec, qui régissent les pêcheries en eau douce de leurs provinces respectives. Les pêcheries intérieures des provinces maritimes n'ont que fort peu d'importance au point de vue commercial; leurs statistiques sont colligées par le personnel de la Direction des Pêcheries du Dominion. Il en est de même pour celles de la Colombie Britannique. Cette dernière province possède une Division des Pêcheries, mais cet organisme ne s'occupe pas de statistique pour son propre compte.

En vertu de l'arrangement dont il est parlé plus haut, les statistiques du poisson péché et des produits offerts en vente à l'état frais ou après une préparation sommaire, sont recueillies par les fonctionnaires locaux des services des pêcheries, vérifiées et condensées au ministère du Service Naval, puis compilées au Bureau Fédéral de la Statistique. En ce qui concerne le poisson industriellement préparé et ses sous-produits, des formules similaires à celles en usage dans le recensement des autres branches de production sont envoyées directement par ce Bureau aux poissonneries, établissements de salaison, de conserves de poisson, etc., les fonctionnaires des services des pêcheries s'assurant que ces formules sont consciencieusement remplies et promptement retournées. Les fonctionnaires des gouvernements provinciaux voudront bien accepter nos remerciements pour le concours qu'ils nous ont prêté.

R. H. COATS,
Statisticien du Dominion.

BUREAU FÉDÉRAL DE LA STATISTIQUE,
OTTAWA, 24 février 1920.

Notice sur les pêcheries canadiennes

On peut dire sans exagération que le Canada possède les pêcheries les plus vastes du monde et que ses eaux contiennent les principaux poissons comestibles en plus grande abondance qu'en toute autre partie du globe. La richesse des eaux canadiennes est démontrée par le fait que la totalité du saumon, du homard, du hareng, du maquereau et de la sardine, la plus grande partie de l'églefin et une portion considérable de la morue, de la merluche et du merlan que l'on y prend, sont péchés dans une zone qui ne s'étend pas à plus de dix ou douze milles du rivage.

Les rives des provinces de l'Atlantique, depuis Grand Manan jusqu'au Labrador, mesurent plus de 5,000 milles, à l'exclusion des anses et échancrures qui les dentellent, tandis que les étendues maritimes qu'elles embrassent comprennent: la Baie de Fundy, avec ses 8,000 milles carrés; l'estuaire du St-Laurent, au moins dix fois plus grand, et d'autres eaux océaniques représentant ensemble plus de 200,000 milles carrés, c'est-à-dire plus des quatre cinquièmes des pêcheries du nord de l'Atlantique. De plus, l'on compte 15,000 milles carrés d'eaux intérieures, sous le contrôle absolu du Dominion.

Mais ces vastes étendues ne représentent qu'une partie des eaux canadiennes. La Baie d'Hudson, dont les côtes s'étendent sur une longueur de 6,000 milles, est plus grande que la Méditerranée. Sur le Pacifique, le littoral canadien mesure plus de 7,000 milles; ses baies et ses fjords innombrables offrent aux pêcheurs une multitude d'abris très sûrs. Enfin, disséminés sur tout le territoire, s'égrène une série de lacs, couvrant ensemble une superficie de 220,000 milles carrés, soit plus de la moitié des eaux douces du globe; dans cette étendue, la part du Canada dans les grands lacs du bassin du St-Laurent, figure pour 72,700 milles carrés.

L'abondance et l'excellence du poisson sont un facteur de tout premier ordre. Pendant longtemps, la morue et le saumon se sont disputés le premier rang mais, dans les dernières années, le homard tant par son volume que par sa cherté, a quelquefois relégué la morue au troisième rang.

On peut considérer la pêche dans l'Atlantique sous deux aspects distincts: la pêche hauturière (ou de haute mer) et la pêche côtière. La pêche hauturière est pratiquée par des navires de 40 à 100 tonneaux, montés par des équipages de douze à vingt hommes, qui pêchent à la ligne, et aussi par des chalutiers à vapeur d'environ 150 pieds de longueur. Comme boëtte, on emploie principalement le hareng, l'encornet et le capelan et l'on prend de la morue, de l'églefin, de la merluche, du merlan et du flétan. Quant à la pêche côtière, elle se fait au moyen de petites embarcations, généralement automotrices, que montent deux ou trois hommes et dans de petites barques, ayant de quatre à sept hommes d'équipage. Ces pêcheurs en bateau font usage de rets à mailles, de chaluts et de lignes à main, tandis que ceux qui pêchent sur le rivage se servent de pièges ou casiers, de seines et de nasses. Les poissons comestibles que l'on prend sur la côte sont: la morue, la merluche, l'églefin, le merlan, le flétan, le hareng, le maquereau, le gasparot, l'alose, l'éperlan, le carrelet et la sardine.

Les plus importantes pêcheries de homard de l'univers se trouvent tout le long du littoral oriental du Canada, cependant que d'excellents bancs d'huîtres existent en maintes parties de l'estuaire du St-Laurent, notamment à proximité de l'île du Prince-Edouard.

La pêche du saumon prédomine sur le littoral du Pacifique, quoique de grands navires, bien équipés, se livrent à une fructueuse pêche du flétan, dans les eaux septentrionales de la Colombie Britannique, la méthode usitée étant la ligne de fond, que l'on tend et que l'on relève au moyen de doris, tout comme cela se pratique dans les pêcheries en eau profonde de l'Atlantique. Le hareng est très abondant sur la côte du Pacifique et fournit une inépuisable provision de boëtte pour la pêche du flétan. Dans les lacs intérieurs, on pêche à l'aide de rets à mailles, d'éperviers, de seines et de lignes ordinaires.

PÊCHERIES, 1918.

Introduction.

Les statistiques du présent rapport se rapportent à l'année civile 1918. Elles sont présentées en trois parties, précédées par un résumé général et suivies d'une revue des années précédentes. La première partie est consacrée au poisson pêché et mis sur le marché; la deuxième partie est relative aux moyens de production considérés (1) dans les opérations de pêche¹ et (2) dans les établissements industriels de préparation et de mise en boîte du poisson; la troisième partie se compose de tableaux spéciaux présentant les importations et les exportations, les primes, etc.

Résumé de la production.

La valeur totale des produits des pêcheries canadiennes, au cours de l'année 1918, atteignit \$60,250,544, au lieu de \$52,312,044 en 1917. Le tableau qui suit indique la quantité des principaux poissons alimentant l'industrie poissonnière, rapportée par les pêcheurs et leur valeur marchande, durant les années 1914-1918.

1. Quantité² et valeur³ des principaux poissons.

La saison de pêche en 1918.

Sur le littoral de l'Atlantique, le froid et la tempête régnèrent durant le premier trimestre. En fait, pendant la totalité de la saison de pêche, la température fut défavorable, spécialement pour la pêche en bateau. En août et septembre, les opérations tant en haute mer que le long de la côte, furent sérieusement contrariées par la présence d'un sous-marin ennemi, qui coula un chalutier à vapeur et plusieurs voiliers.

Les prises de la flottille de pêche du banc de Lunenburg ont été légèrement inférieures à celles de l'année précédente, en raison de la perte de quelques bateaux et de la perturbation causée par la présence du sous-marin. La pêche de l'églefin, en Nouvelle-Ecosse où elle se pratique sur une grande échelle, a été moins fructueuse que de coutume; cette décroissance se justifie surtout par le fait qu'à Ingonish, où on le prend dans des nasses, ce poisson était moins abondant que les années précédentes, au printemps.

Dans la Baie de Fundy, on a pris de grandes quantités de sardines, que les pêcheurs ont vendues à des prix très rémunérateurs. Toutefois, la cessation soudaine des hostilités en Europe eut une fâcheuse répercussion sur cette industrie; faute de commandes, les cours baissèrent considérablement et les sardineries durent disposer de leurs produits à des prix bien inférieurs à ceux qu'elles espéraient lorsqu'elles achetaient le poisson frais.

En ce qui concerne le homard, la diminution que l'on constatera dans ce rapport est, indubitablement, considérable. Ce crustacé a été rare en quelques-uns des lieux de pêche, mais d'autres causes expliquent l'insuccès de cette pêche. D'abord, le mauvais temps prolongé et la présence anormale de banes de glace ont empêché les pêcheurs de se livrer régulièrement à leurs occupations. Ensuite, l'extrême cherté des agrès de pêche a découragé les pêcheurs de remplacer ceux qu'ils avaient perdus, si bien que les opérations se sont poursuivies avec moins d'ardeur que les autres années.

Dans les grands lacs, les pêcheurs ont joui d'une température propice et sont généralement satisfaits des résultats obtenus.

Au Manitoba, la pêche estivale du poisson blanc dans le lac Winnipeg a été bonne; dans le lac Winnipegosis et les lacs de l'ouest de cette province, on a pris environ la même quantité de poisson que l'an dernier.

En Saskatchewan, les conditions atmosphériques durant la saison de 1918 furent très favorables à la pêche d'hiver; nonobstant l'épidémie d'influenza, la pêche dans les différents lacs du nord de cette province a donné d'excellents résultats.

Sur le littoral du Pacifique, l'influenza a fait sentir ses effets, surtout au point de vue de la pêche du flétan. Dans l'ensemble, la pêche du saumon a été fructueuse. Quoique, dans le district de la rivière Fraser, la montée du dos bleu (sockeye) ait été restreinte et celle des autres variétés moins abondante qu'on ne l'espérait, dans la région septentrionale toutes les espèces de saumon foisonnaient. Dans l'île Vancouver, les opérations de pêche eurent assez de succès. Le saumon y était abondant, principalement sur la côte occidentale, et la prise fut plus considérable que précédemment. La pêche au flétan, tant par les embarcations canadiennes que par celles des Etats-Unis, donna d'excellents résultats, malgré l'épidémie d'influenza.

Au cours de l'année, quatre chalutiers à vapeur se sont livrés à la pêche, dont deux sur le littoral du Pacifique et deux sur le littoral de l'Atlantique; leurs opérations ont été heureuses et font présager le renouvellement de cette tentative, avec des moyens augmentés. La pêche à la ligne aussi a fait des progrès; des chaloupes automobiles assez grandes pour se rendre aux bancs de l'Atlantique les plus rapprochés prennent rapidement la place des vieux voiliers de moyen tonnage, en maintes localités.

Poisson pêché et mis en vente.

En l'année 1918, les produits des pêcheries maritimes du Canada, ont rapporté aux pêcheurs la somme de \$32,478,864; les mêmes produits, mis sur le marché, représentaient une valeur de \$54,231,539¹. Les produits de la pêche en eau douce avaient une valeur marchande de \$6,019,005².

On verra dans le tableau ci-après, pour chaque espèce de poisson, les quantités pêchées et la valeur de la prise; pour le poisson de mer on donne, en outre, sa valeur marchande après les diverses préparations auxquelles il a été soumis.

¹ Pour le poisson frais, la valeur marchande est le prix payé à l'expéditeur du littoral; pour le poisson fumé, séché, salé ou autrement préparé et les produits du poisson, cette valeur est le prix payé à l'industriel qui l'a ainsi préparé.

² Pour le poisson d'eau douce, il n'y a qu'une valeur unique, pour la raison que les pêcheurs le vendent directement aux marchands en gros et qu'il ne subit aucune préparation.

2. Quantité et valeur de tout le poisson pris et mis en vente au Canada durant l'année 1918.

CAPITAL.

En 1918, l'industrie poissonnière du Canada absorbait un capital de \$60,221,863, au lieu de \$47,143,125 en 1917. Cette somme comprend, tout à la fois, les opérations de pêche proprement dites et la manipulation industrielle du poisson, ainsi qu'on le verra par le tableau ci-après:

3. Capitaux engagés en 1917 et 1918.—Opérations de pêche proprement dites.

RECENSEMENT INDUSTRIEL

PERSONNEL.

En 1918, l'industrie poissonnière a occupé 87,070 personnes, au lieu de 95,122 en 1917. Les opérations de pêche proprement dites occupèrent 68,516 personnes, contre 77,140 en 1917 et la manipulation industrielle du poisson donna de l'ouvrage à 18,554 autres ouvriers et employés, au lieu de 17,982 en 1917. Parmi ces derniers, il y avait, en 1918, 6,659 femmes et filles, comparé à 4,303 en 1917.

On verra, dans le tableau suivant, le nombre des pêcheurs montant les navires, barques, etc., ainsi que la main-d'œuvre des établissements de préparation du poisson, tant pour 1918 que pour 1917.

4. Personnel de l'industrie poissonnière, en 1917 et 1918.

Autres données relatives à l'exploitation des établissements de l'industrie poissonnière.

MAIN-D'ŒUVRE ET SALAIRES.

EMPLOYÉS DE TOUTES CATÉGORIES.—En 1918, le personnel administratif se composait de 615 personnes, au lieu de 636 en 1917; les ouvriers et journaliers étaient au nombre de 12,558, contre 12,494 en 1917; enfin, on comptait 5,381 tâcherons et ouvriers aux pièces, au lieu de 4,852 en 1917. En Colombie Britannique, la majorité des ouvriers des fabriques de conserves de poisson sont placés sous un régime spécial, l'entrepreneur engageant et payant directement sa main-d'œuvre et étant lui-même payé par le fabricant selon la quantité

de poisson mis en boîte par son équipe. En ce qui concerne ces derniers et les ouvriers aux pièces, on ne possède d'autre information que leur nombre et le chiffre total de leur rémunération. Par conséquent, les statistiques de ce rapport consacrées à la main-d'œuvre employée par mois, à la classification des ouvriers selon leur gain hebdomadaire, etc., ne comprennent ni les tâcherons ni les ouvriers aux pièces.

APPOINTEMENTS ET SALAIRES.—Les traitements et appointements du personnel administratif se sont élevés en 1918 à \$699,681 au lieu de \$668,987 en 1917; les salaires des ouvriers et journaliers ont atteint \$2,866,761 en 1918, contre \$2,808,277 en 1917; enfin, les gains des tâcherons et ouvriers aux pièces forment un total de \$1,073,149 en 1918, comparé à 739,766 en 1917.

CLASSIFICATION DES GAINS HEBDOMADAIRES.—L'échelle des gains hebdomadaires commence à «moins de \$3» et se termine à «\$25 et plus»; en 1918, le plus grand nombre des ouvriers se trouve dans la catégorie «\$15 mais moins de \$20». L'année précédente, la catégorie la plus nombreuse recevait «\$9.00 mais moins de \$10.» Dans le tableau qui suit, nous donnons le nombre des employés des deux sexes, dûment classifiés.

5. Personnel (1) des établissements de préparation et mise en boîte du poisson, en 1917 et 1918, selon leur salaire hebdomadaire.

DURÉE DES OPÉRATIONS ET HEURES DE TRAVAIL.—En 1918, dans les établissements qui nous occupent, on a travaillé une moyenne de neuf heures par jour et cinquante-cinq heures par semaine. En moyenne, chacun de ces établissements a fonctionné pendant 100 jours entiers, plus 16 fractions de journées et est resté fermé durant 188 jours.

PERSONNEL OCCUPÉ PAR MOIS.—La période de plus grande activité se place, partout, en mai et juin. Le tableau suivant indique les fluctuations du personnel pendant l'année.

6. Personnel des établissements de préparation et de mise en boîte du poisson.—Nombre sur la liste de paie le 15 de chaque mois, en 1917 et 1918.

CONSOMMATION DE COMBUSTIBLE

La consommation de combustible des usines et fabriques de l'industrie poissonnière représentait, en 1918, une valeur de \$557,710. La houille bitumineuse y figure pour \$349,109, la gazoline pour \$119,837, puis le bois pour \$48,232. Il a été également consommé, en quantités moindres, de l'anthracite et du lignite, du coke, du pétrole et du gaz. En 1917, la totalité du combustible n'avait coûté que \$379,339; il se classait dans l'ordre suivant: houille bitumineuse, gazoline et bois.

FORCE MOTRICE EMPLOYÉE

Pour l'ensemble des établissements, on constate une augmentation sur 1917 du nombre des moteurs à gaz, des moteurs hydrauliques et des moteurs électriques et une diminution des machines à vapeur, des moteurs à gazoline et des turbines. L'accroissement le plus considérable est celui des moteurs électriques (possédés ou loués); en 1918, on compte 121 de ces unités, ayant produit 1,357 chevaux-vapeur effectivement utilisés, au lieu de 41 moteurs et 580 chevaux-vapeur en 1917. On trouve aussi en 1918, 332 chaudières; les formules du recensement de l'année précédente n'en parlaient pas.

FRAIS GÉNÉRAUX

Sous cet en-tête, on a groupé les loyers de bureaux, d'usines, de machinerie, de force motrice; les primes d'assurance, les taxes, les droits régaliens, les frais de voyage et de publicité, les réparations ordinaires aux bâtiments et à l'outillage. Ils se totalisent à \$2,297,304 en 1918, au lieu de \$2,214,555 en 1917.

MATIÈRES PREMIÈRES

Le poisson acheté et manutentionné en 1918 a coûté aux industriels \$16,648,265; le sel, les récipients et autres matériaux ou substances ont coûté \$4,911,160.

VALEUR DES PRODUITS

En 1918, la valeur totale des produits de tous les établissements de préparation et de mise en boîte du poisson était de \$34,007,628, dont \$5,575,004 pour le poisson mis en vente à l'état frais et \$28,432,624 pour le poisson en boîte, ou séché, fumé ou autrement préparé. Il n'y a pas de comparaison possible entre ces chiffres et ceux de l'an dernier, car le rapport de 1917 ne faisait pas de distinction entre le poisson manutentionné dans les usines (⁽¹⁾) et celui préparé par les pêcheurs.

RÉPARTITION PAR PROVINCES

Les cinq tableaux qui suivent donnent, pour chaque province, la valeur totale de ses pêcheries; la quantité pêchée des principaux poissons dont on fait commerce et leur valeur marchande; la quantité et la valeur de tout le poisson pris et mis en vente; la quantité de poisson de mer pris sur les bancs (par comtés); enfin, le montant des capitaux affectés aux opérations de pêche proprement dites.

⁽¹⁾ Le nom d'usines est donné à tous les établissements de l'industrie poissonnière, grands ou petits, qui emploient de la main-d'œuvre rémunérée.

STATISTIQUE DES PÉCHERIES

Primes

En vertu d'une loi pour encourager le développement des pêcheries maritimes et la construction de navires de pêche, une somme de \$160,000 est donnée en primes, chaque année, aux pêcheurs des provinces maritimes. Ces primes sont réparties et distribuées sur les bases fixées, de temps à autre, par décrets ministériels.

Pour l'année 1918, ces versements se sont effectués sur les bases suivantes:

Aux propriétaires de navires de pêche, \$1 par tonneau enregistré, avec un maximum de \$80 par navire.

A chaque membre de leur équipage \$6.25.

Aux propriétaires de barques mesurant au moins 13 pieds de quille, \$1 par embarcation.

A chaque pêcheur montant ces barques, \$3.80.

Il a été reçu 14,452 demandes de primes, dont 14,440 ont été admises. L'année précédente, le nombre des réclamations avait atteint 14,532, dont 14,516 admises. Au total, il a été versé \$159,675.25, se répartissant ainsi:

A 784 navires et leurs équipages, \$53,298.30.

A 13,655 barques et leurs équipages, \$106,376.95. Le tableau 2 de la III^e partie donne le détail de ces primes, par comtés, pour 1918.

Importations et exportations.

La valeur du poisson et des produits du poisson importés au Canada durant l'exercice terminé le 31 mars 1919, est estimée à \$3,183,818. Pendant la même période, nos exportations se sont élevées à \$27,137,072. On en trouvera les détails dans la III^e partie, tableau 3.

Revue rétrospective.

Les trois tableaux suivants présentent une revue rétrospective de l'industrie de la pêche au Canada dans les années passées. En ce qui concerne la production, les données sont établies par provinces et par année et remontent jusqu'à 1870. Quant au nombre et à la valeur des navires, barques, etc., les chiffres partent de l'année 1880. Enfin, le personnel occupé à cette industrie nous est révélé depuis 1895.

12. Revue rétrospective.—(a) Valeur totale des pêcheries dans les différentes provinces du Canada, depuis 1870 jusqu'à 1918 inclusivement.

Tomalley.	Foie de homard
Tom cod.	Tacaud
Tongues and sounds.	Langues et noues
Trout.	Truite
Tullibee.	Tullipé
Whales.	Baleine
Whale bone and meal.	Fanon et engrais de baleine
Whale oil.	Huile de baleine
Whitefish.	Poisson blanc ou ablette
Whiting.	Colin
Witches.	Epinoche

GLOSSARY—VOCABULAIRE.

GENERAL TERMS—EXPRESSIONS USUELLES

English	Français
Advertising	Publicité
Agencies of Production—Part I In Primary Operations	Moyens de production—1 ^{re} partie: pêche proprement dite
Agencies of Production—Part 2: Fish Canning and Preserving	Moyens de production—2 ^{me} partie: préparation et mise en boîte du poisson
All other (Provincial, municipal, etc.)	Toutes autres (provinciales, municipales, etc.)
All other sundry expenses	Toutes autres dépenses diverses
Ambregris	Ambre gris
Anchovies	Anchois
And over	Et plus
Anthracite	Anthracite
Average number of hours worked	Nombre moyen d'heures de travail
Bbl	Brl ou baril
Bituminous	Bitumineux
Boats	Bateaux ou barques
But under	Mais au-dessous
Canned	En boîte
Capital and Employees	Capital et employés
Carrying Smacks	Bateaux de transport de pêche ou semences
Carrying Smacks and scows	Bateaux de transport de pêche et allégés ou semences
Cases	Caisse
Cash accounts and bills receivable	En caisse, comptes et billets à recevoir
Caught and landed	Pris et débarqué ou pêché
Clam and other canneries	Établissements à moules et mollusques
Classification of Wage-earners according to weekly wages as at date of December 15 or nearest per-day	Classification des ouvriers, selon leur salaire hebdomadaire, au 15 décembre, ou au jour de paie le plus rapproché
Clerks, stenographers and salesmen, etc.	Commissaires, sténographes, vendeurs, etc.
Coal	Charbon
Coke	Coke
Comprises	Comprend
Contract labour	Travail à l'entreprise
Counties	Comtés
Crab establishments	Établissements à crabes
Crab traps	Pièges à crabes
Cwt	Qtx
Days in operation	Jours en opérations
Dip or roll nets	Carrélets sur dévidoirs
Districts	Districts
Dried	Séché
Dust or slack	Poussier ou menu
Eel traps	Pièges à anguille
Electric motors	Moteurs électriques
Employees on salaries	Employés recevant un traitement ou des appontements
Employees on wages	Ouvriers salariés
Employees on wages by months	Ouvriers au mois
Establishment	Établissement
Female	Femme
Fertilizer	Engrais
Fish caught and marketed	Poisson, pêché et mis en vente
Fish wheels	Pièges tourneuses
Fishing gear	Gréés de pêche
Fishing piers and wharves	Jetées et quais de pêche
Freezers and ice houses	Établissements frigorifiques et glacières
Fresh and frozen	Frais et congelé
Fresh or salted	Frais ou salé
Fuel used	Combustible employé
Gal	Gallon ou gall.
Gas	Gaz
Gasoline	Gazoline
Gasoline boats—Row and sail	Bateaux à gazoline, à rames et à voile
Gill nets, seines, trap and snell nets	Filets à mailles, seines, filets de pièges et à épervier
Green-salted	Sale vert
Hand lines	Lignes à main
Home Consumption	Consommation domestique
Hoop nets	Seines à cercle
H. P. according to manufacturers rating	C. V. maximum potentiel
H. P. actually employed	C. V. effectivement employés
Idle	Gisif—arrêté
Imports and exports of fish and fish products	Importations et exportations de poisson et des produits du poisson
In addition to quantities given in the table following equipment was used by anglers	Outre les quantités données dans le tableau, les agrès suivants ont été employés par les pêcheurs à la ligne
In addition to these numbers there were also in British Columbia workers under the contract system, with regard to which we have no details of employment	Outre ces nombres il y avait aussi dans la Colombie Britannique ouvriers sous le système de travail à l'entreprise à l'égard desquels nous manquons de détails
Inland Fisheries	Pêches intérieures
Insurance	Assurance
Land, buildings and fixtures	Terrain, bâtiments et agencement
Lb	Liv.
Less than half time	Moins d'une demi-journée
Licensed Canneries	Fabriques de conserve de poisson patentées
Lines	Lignes
Lines and sturgeon lines	Lignes et lignes à esturgeon
Live fish or fish eggs for propagating purposes	Poisson vivant ou œufs de poisson pour pisciculture
Lobsters canned and shipped in shell	Homard, en conserve, et vivant ou frais
Lobster canneries	Fabrique de conserves de homard ou homarderies
Lobster traps	Caisiers à homard
Machinery and tools	Machinerie et outils

GLOSSARY—VOCABULAIRE.

GENERAL TERMS—concluded—EXPRESSIONS USUELLES—fin.

English	Français
Male	Hommes
Marketed	Mis sur le marché.
Materials in stock, fuel, etc.	Matières premières en stock, combustible, etc.
Men	Hommes
Miscellaneous expenses	Frais généraux
