Florence A. Brown

#### ADVANCE REPORT ON THE FISHERIES OF CANADA, 1934.

The following advance report on the fisheries of Canada for the year 1934 is issued by the Dominion Bureau of Statistics, in co-operation with the Department of Fisheries.

#### PRODUCTION

The product of the Canadian fisheries in 1934 had a total value of \$34,121,971, this figure representing the value of the fish as marketed whether sold for consumption fresh, or prepared in the various ways — canned, smoked, dried, etc. The total value shows an increase over 1933 of \$6,625,025, or 24 per cent, and an increase over 1932 of \$8,164,862, or 31 per cent.

The three principal kinds of fish in order of value of production are salmon (\$12,875,257); lobster (\$4,269,764); and cod (\$3,327,507). The salmon fishery shows an increase in catch over 1933 of 240,355 cwt, and an increase in marketed value of \$3,116,911. Salmon is marketed chiefly as canned, and the number of cases (48 pounds to the case) increased from 1,267,630 in 1933 to 1,584,593 in 1934. To the total value of output of the salmon fisheries, British Columbia contributed \$12,351,641, or 96 per cent. The lobster fishery belongs entirely to the Atlantic coast provinces - Prince Edward Island, Nova Scotia, New Brunswick and Quebec. Canned lobster is the main item of production of the lobster fishery, with a total value in 1934 of \$2,380,674, Lobster sold in shell had a total value of \$1,769,517. Other products of the lobster fishery are meat and tomalley Compared with the preceding year, the marketed value of the product of the lobster fishery shows an increase of \$745,409, while a reduction of 12,924 cwt, is shown in the catch. The cod fishery is almost exclusively of the Atlantic coast, British Columbia being credited in 1934 with only one per cent of the total value of production, Cod is sold chiefly as dried, but large quantities are sold also for consumption fresh, as fresh fillets, smoked fillets and boneless, Compared with the preceding year, the catch of cod shows an increase of 152,412 cwt., and the value an increase of \$728,751 Among the other principal kinds of fish are herring (\$1,799,967); whitefish(\$1,358,692); halibut (\$1,133,955); haddock (\$1,075,529); and sardines (\$1,039,002) Halibut comes chiefly from British Columbia, and the figures for 1934 are not comparable with those of previous years for the reason that the quantity landed in British Columbia by United States vessels was previously included with the catch and the quantity marketed fresh for that province, while in the preparation of the statistics for 1934 it was decided to give the landings by Canadian fishermen only and to show in a footnote the landings by United States vessels. The landings by United States vessels in 1934 totalled 84,921 cwt. In 1933 the landings by United States vessels amounted to 87,573 cwt and this quantity is included in the catch of 200,824 cwt. shown in the statistics for that year.

The immensity of her salmon fisheries has placed British Columbia in first position among the provinces in order of value of production, with a total in 1934 of \$15,334,335. Nova Scotia is second with \$7,673,865, and New Brunswick, third, with \$3,679,618.

The total quantity of fish of all kinds (including shell fish) caught and landed during the year 1934 was 9,330,869 cwt., and the value at the point of landing \$19,715,339, compared with a catch of 8,133,572 cwt., and a landed value of \$16,213,844 in 1933.

#### CAPITAL EQUIPMENT AND EMPLOYEES

Capital.— The value of the vessels, boats, nets, traps, piers and wharves, etc. engaged in the primary operations of catching and landing the fish in 1934 was \$26,212,703, of which \$21,944,952 is credited to the sea fisheries and \$4,267,751 to the inland fisheries. Compared with the preceding year the value of the boats and gear shows an increase of \$831,421. In the industry of fish canning and curing the capital investment was valued at \$17,164,828, this total comprising the following items: land and buildings, materials, fuel, supplies and finished products on hand, and cash and accounts and bills receivable. The capital investment of the establishments records an increase over 1933 of \$1,632,053. The total number of establishments in operation during the year 1934 was 663, divided by provinces as follows: Prince Edward Island, 98; Nova Scotia, 184; New Brunswick, 150; Quebec, 134; and British Columbia, 97. There are no fish canning and curing establishments in connection with the inland fisheries. The total capital investment of the Canadian fisheries, including the primary operations and the fish canning and curing industry, amounted to \$43,377,531, compared with \$40,914,057 in 1933.

Employees.— The number of men employed in the operations of catching and landing the fish was 68,634, compared with 65,506 in 1933, and the number of persons (male and female) employed in the establishments in the preparation of the fish products was 14,762, compared with 14,042. The industry as a whole gave employment during the year to a total of 83,396 persons, an increase over 1933 of 3,848.

#### Tables

Statistics of the catch, of the product as marketed, and of the capital equipment and employees are given in the following tables.

1. Quantity and Value of Fish Caught and Marketed, Canada, during the years, 1933 and 1934.
