REPORT ON THE

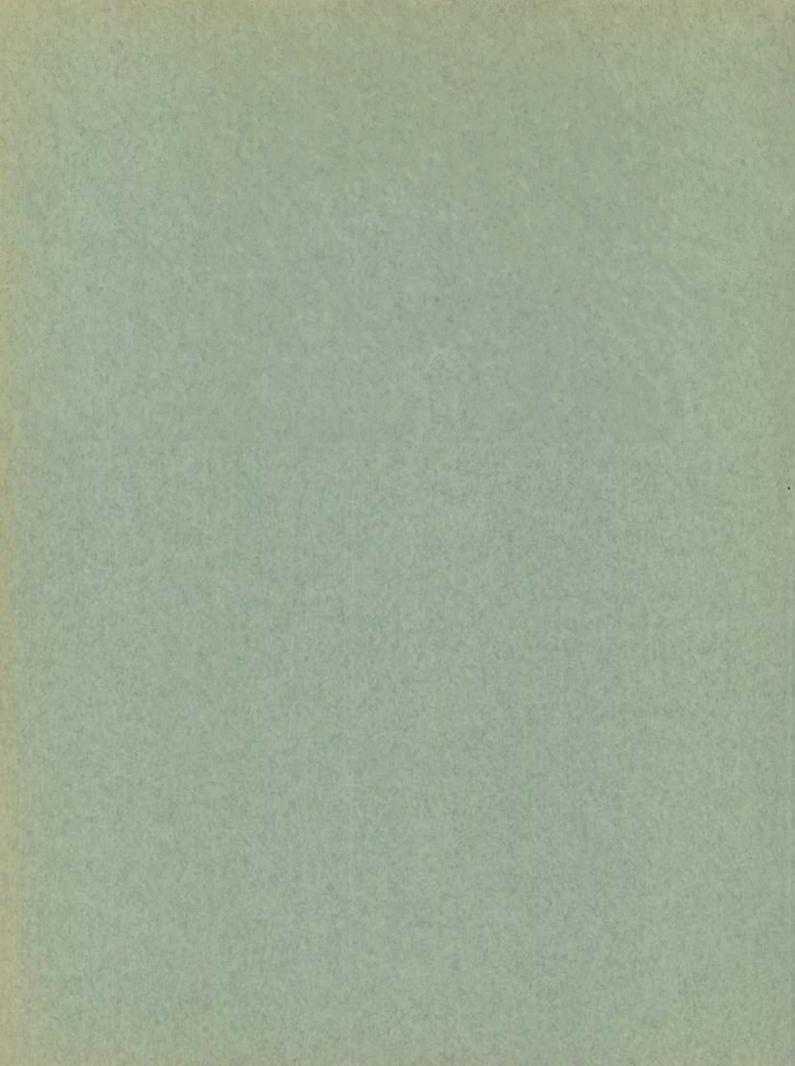

MINERAL PRODUCTION OF CANADA

DURING THE SIX MONTHS ENDING

JUNE, 1938

(With Revised Statistics for Calender Year 1937)

Published by Authority of the HON. W. D. EULER, M.P. Minister of Trade and Commerce.

DEPARTMENT OF TRADE AND COMMERCE
DOMINION BUREAU OF STATISTICS
MINING, METALLURGICAL AND CHEMICAL BRANCH
OTTAWA - CANADA

Dominion Statistician: R. H. Coats, LL.D., F.R.S.C., F.S.S. (Hon.) Chief - Mining, Metallurgical and Chemical Branch: W. H. Losee, B.Sc.

PRELIMINARY REPORT on THE MINERAL PRODUCTION OF CANADA DURING THE SIX MONTHS ending JUNE 30th, 1938.

Canada's mineral production during the first six months of 1938 was valued at \$209,654,610 compared with \$215,382,814 during the same period of a year ago, according to a report issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, Ottawa.

Gains were recorded in the output of most of the base metals but lower prices for copper, lead and zinc, along with a lessened production of several important non-metallic minerals, combined to reduce the total value of the production 2.7 per cent.

Gold mining, however, continued to expand and the increase in production from this industry, together with the remarkable advance in crude oil production in the Turner Valley Field of Alberta, tended greatly to offset the drop in value of some of the other products.

The value of production by groups was as follows: metals, \$157,124,764 against \$164,211,056, a drop of 4.32 per cent; fuels, including coal, crude petroleum, and natural gas, \$32,843,790 compared with \$29,693,945, an increase of 10.6 per cent; non-metallics, other than fuels, \$8,941,968 against \$10,263,265, a decrease of 13 per cent, and structural materials, including clay products, cement, lime, stone and sand and gravel, \$10,744,088 compared with \$11,214,548,in the first six months of 1937, a decrease of 4.2 per cent.

METALS

In the metals group, gains in output were recorded for copper, gold, lead, metals of the platinum group, selenium, silver and zinc but in the value of production only gold and silver showed an increase over last year.

COLD - As indicated by the returns, the gold mining industry of the country continued to expand. New fields are being developed and mines are being brought rapidly to the producing stage. Properties in some of the older camps, which were discarded years ago when the price of gold was \$20.67 per ounce, are being rejuvenated under the new price with remarkable success, prospecting is being carried on in many promising districts, and as the summer passes, many new finds are recorded by the press. The aeroplane has been of no small assistance in these new developments. The discovery and subsequent development of a new gold field on the west coast of Vancouver Island at Zeballos has given a great impetus to prospecting in that area

and many parties are reporting finds in the Yellow Knife and Gordon Lake areas of the Northwest Territories.

Canadian gold production totalled 2,219,309 fine ounces which, when valued at \$35,13 per fine ounce - the average price of a fine ounce of gold for the period - totalled \$77,964,325 against 1,966,858 fine ounces worth \$68,820,361 during the first six months of 1937 when the average price of gold was \$34.99 per fine ounce. Increases in output were recorded for every gold producing province; the mines of Ontario yielded 61.85 per cent of the total; Quebec, 19 15 per cent; British Columbia, 12,68 per cent; Manitoba and Saskatchewan, combined, 5.12 per cent, and the remainder came from Nova Scotia, Yukon, and the Northwest Territories.

COPPER - Copper production totalled 292,396,871 pounds valued at \$27,765,202 compared with 243,919,406 pounds worth \$34,377,884 during the first six months of The average price of copper during the period was 9.551 cents per pound against an average of 14,18 cents a year ago Increases were recorded in all provinces. Quebec output was up 39 per cent; Ontardo, 3.5 per cent; Manitoba and Saskatchewan, combined, 47 per cent; and British Columbia, 84 per cent. discovery of new ore bodies in the Waite-Amulet mine in western Quebec is one of the outstanding developments of the period. The Granby Consolidated was not producing in British Columbia during the first six months of 1937, but steady production from this source during the first half of the present year is reflected in the total output from that providince. Production in Manitoba was augmented by the re-opening of the Sherritt Gordon mine about August 1st, 1937, Ontario coppernickel mines are responsible for practically all the copper produced in that province while Quebec's production is largely Noranda followed by Aldermac, Consolidated Copper & Sulphur Co. (Eustis), and Waite Amulet; the latter company ships to the Noranda smelter while the Aldermac and Eustis export concentrates to foreign markets.

NICKEL - Nickel output totalled 109,286,472 pounds worth \$28,559,696 compared with 111,610,392 pounds valued at \$29,218,283 during the first six months of 1937. Output consisted of refined nickel made at Port Colborne, nickel in matte exported by the International Nickel Company of Canada, Limited, and the Falconbridge Nickel Mines Ltd., and nickel in nickel oxide sold.

LEAD - Lead output during the half year increased 2.89 per cent to 204,961,121 pounds but owing to the decrease in average price to 3.394 cents per pound compared with 5.857 cents during the corresponding period of 1937, the total value of production dropped 40.38 per cent to \$6,956,380. The mines of British Columbia accounted for 99 per cent. The Mayo district of Yukon contributed 1,875,384 pounds; a small amount was credited to Ontario.

ZINC — Zinc output totalled 197,951,223 pounds valued at \$6,154,303 compared with 170,535,713 pounds worth \$9,348,768 during the first six months of 1937. These figures represent an increase in output of 16.08 per cent but a decrease in value of 34.17 per cent. The average price of zinc on the London market. transposed to Canadian funds, dropped from 5.482 cents per pound during the first six months of 1937 to 3.109 cents per pound during the period January to June, 1938. Production from British Columbia mines, principally the Sullivan which is owned and operated by the Consolidated Mining and Smelting Company of Canada, Limited, totalled 159,963,332 pounds; the Hudson Bay Mining & Smelting Company. Ltd., contributed the balance. A zinc concentrate which is being made at the mill of the Waite-Amulet in western Quebec is being stock piled at present and for that reason no production from that province was recorded during the period. Exports of zinc in the form of spelter, in ore, and scrap during the first six months of 1938 totalled 164,472,700 pounds against 141,033,800 pounds during the corresponding

period of 1937.

SILVER - Silver production rose 9.65 per cent in quantity to 10,532,011 fine ounces and 6.95 per cent in value to \$4,622,605. Gains were recorded in all provinces except Ontario and Nova Scotia. British Columbia mines accounted for slightly more than 50 per cent of the total output. Silver is produced in association with practically all other metals. The bulk of the production comes from the silver-lead-zinc ores of British Columbia, the copper-gold and copper-zinc ores of Manitoba, Saskatchewan and Quebec, and from the nickel-copper ores of Ontario. Silver is associated with pitchblende mined at Great Bear Lake and the gold mines throughout the country contibuted to the aggregate.

METALS OF THE PLATINUM GROUP - Canada produces more platinum than any other country. Small quantities of stream platinum are recovered annually from rivers in British Columbia but the principal Canadian source is the nickel-copper ores of the Sudbury district. The combined output of platinum, palladium and other metals of this group totalled 130,077 fine ounces worth \$3,978,828 compared with 125,886 fine ounces valued at \$5,119,265 during the first half of last year.

OTHER METALS Selenium and tellurium are recovered in the refining of copper. The output and value of selenium was greater than during the first six months of 1937 but tellurium production was less. Arsenic, cadmium and cobalt showed a decline also. Radium and uranium are produced at Port Hope from the pitchblende ores mined at Great Bear Lake in the Northwest Territories. Permission to publish the production of radium and uranium has not been granted.

NON-METALLICS (FUELS)

Coal production during the period under review totalled 6,907,209 tons valued at \$21,088,912 compared with 7,038,225 tons worth \$21,367,904 during the corresponding period of 1937. Nova Scotia mines recorded an increase to 3,259,316 tons from 3,136,897 tons; New Brunswick mines dropped to 154,295 tons from 224,611; Saskatchewan produced 416,888 tons or 4.5 per cent below the output a year ago; Alberta, the largest coal producing province, showed a falling-off to 2,351,911 tons from 2,438,338 tons though the output of sub-bituminous coal rose to 259,065 tons from 216,336 tons. British Columbia production totalled 723,678 tons against 800,214 tons during the first six months of 1937. Manitoba's production was down also.

Imports of all kinds of coal during the period under review totalled 4,986,691 tons against 6,247,986 tons during the period January to June, 1937, and exports dropped to 165,588 tons compared with 182,109 tons. Anthracite imports totalled 1,582,922 tons of which 1,068,739 tons came from United States mines and 386,718 tons from Great Britain, 120,115 tons from Germany, and 7,350 tons from Morocco. Of the 3,402,728 tons of bituminous coal imported, 3,359,299 tons, or nearly 99 per cent, came from the United States; Great Britain supplied 34,898 tons and other countries just 8,531 tons. Lignite importations totalled 1,041 tons, all from the United States.

Natural gas production in Canada during the first six months of 1938 totalled 17,985,532 thousand cubic feet compared with 15,536,287 thousand cubic feet a year ago. The output from Alberta wells amounted to 11,575,951 thousand cubic feet, exclusive of the waste gas burned in the Turner Valley field and the gas piped to the Bow Island field for repressuring. Ontario wells produced 6,000,000 thousand cubic feet during the period under review; New Brunswick wells, 359,746 thousand cubic feet, and Saskatchewan wells, 49,535 thousand cubic feet.

The production of crude petroleum and natural gasoline in Canada during the six months ending June advanced 174.9 per cent from the output in the corresponding period of 1937; the totals were 2,919,425 barrels and 1,062,046 barrels, respectively. Increased production in the Turner Valley field, Alberta, was responsible for this sharp advance. During the first half of the current year, eighteen new wells were completed in this field and on June 30th drilling operations were in progress on twenty-two other wells. In February it was announced that changes were being made to increase to 24,000 barrels per day the carrying capacity of the pipe lines from the Turner Valley field to Calgary. Ontario wells produced 81,198 barrels of crude petroleum during the half-year and New Brunswick wells, 8,857 barrels.

NON-METALS (OTHER THAN FUELS)

Non-metallic minerals, other than fuels, showed a loss in value of output of 12.87 per cent. Asbestos production, which represents 64 per cent of the total value of all minerals in this group, was recorded at 132,291 tons worth \$5,757,453, a drop of 33 per cent in quantity and 14 per cent in value from the same period of a year ago. Salt, including salt in brine for chemical works as well as commercial salt, was 2.39 per cent higher in quantity than last year and a little less than 1 per cent lower in value. Gypsum production decreased about 12 per cent from 277,198 tons to 330,607 tons in quantity and from \$648,250 to \$565,485 in value. Sulphur, which includes sulphur in pyrites shipped plus sulphur in sulphuric acid made from waste smelter gases plus elemental sulphur made at Trail, totalled 58,930 tons worth \$577,011 compared with 62,055 tons valued at \$544,425. Decreases in quantity and value were also recorded for feldspar, graphite, iron oxides, magnesitic-dolomite, mica, scapstone, sodium sulphate, and talc. Details of production may be found in the tables.

STRUCTURAL MATERIALS

The value of the production of structural materials was estimated at \$1.0,744,088, a decrease of 4.2 per cent when compared with the corresponding period of a year ago. Monthly figures of production are compiled for clay products, cement and lime, and the output of stone and sand and gravel is estimated. Clay products dropped to \$1,564,088 from \$1,596,548; cement rose from 2,090,000 barrels worth \$3,200,000 to 2,167,461 barrels valued at \$3,215,000; lime production decreased from 269,314 tons to 224,763 tons; and the estimate for the output of stone and sand and gravel was put at \$4,400,000 compared with \$4,500,000 during the first six months of 1937.

EMPLOYMENT

The Census Analysis Branch of the Dominion Bureau of Statistics prepares monthly estimates of the total number of wage-earners in all industries, of those in employment and those unemployed. The estimates for May, 1938, show that the number of men and women available for employment in Canada was greater than in May of other years, except 1930. The number at work was also higher than in May of the years 1931 to 1936, but was lower than in that month of 1937. The number unemployed, though lower than in any May in the period, 1931-1936, was greater than in any other year for which estimates have been prepared, exceeding the figure for May, 1937. As compared with April, 1938, there was a decrease of some 37,000 in the estimated number of unemployed in all industries throughout the Dominion.

On July 1, 1938, returns were tabulated from 429 Canadian mine operators with 71,489 employees compared with 70,848 in their last report. A slight seasonal loss occurred in coal mines, but the extraction of metallic ores and of non-metallic minerals, other than coal, afforded more employment. The general index, at 154.5, was fractionally higher than at the beginning of July, 1937, although the increase over the preceding month had then been rather larger.

This report contains finally revised statistics of Canada's mineral production for 1937. The value of production for the last calendar year totalled \$457,359,092 compared with \$361,919,372, or an increase of 26.4 per cent.

⁽a) Includes low grade silica sand used as flux.

NOTE - Figures for Structural Materials are not available by provinces.

⁽x) Sulphur content of pyrites shipped and estimated sulphur contained in sulphuric acid and other products made from waste smelter gases.

ZINC PRODUCTION OF THE WORLD - JANUARY 1 to JUNE 30, 1938.

Source - American Bureau of Metal Statistics.

Country	Short tons	
The state of the s	239,576	
United States Other North America	106,547	
Belgium and Netherlands (a)	122,300	
France	35,27 9 102,069	
Germany	20,528	
Poland	58,843	
Rhodesia	4,637	
Spain	3, 235 73,107	
Anglo-Australian	98,100	
WORLD'S TOTAL	864,221	-

(a) Partly estimated.

(b) Includes Norway, Yugoslavia, Peru and Indo-China with estimates for Czechoslovakia and Japan.

NOTE - The above table shows the zinc production of the world by primary metallurgical works. The figures include zinc derived from dross and ashes at primary works in the United States, Belgium, France and Germany.
