DOMINION BUREAU OF STATISTICS
MINING, METALLURGICAL AND CHEMICAL BRANCH
OTTAWA - CANADA

Dominion Statistician: R. H. Coats, LL.D., F.A.S.C., F.S.S.(Hon.)
Chief Mining, Metallurgical and Chemical Branch: W. H. Losee, B.Sc.
Mining Statistician: h. J. McDowall, B.Sc.

IRON OXIDES (OCHRE) - 1937.

Production (producers' sales) in Canada during 1937 of iron oxides, crude and calcined, totalled 6,197 short tons valued at \$83,640 compared with 5,854 short tons at \$69,630 in 1936. Both the quantity and value of shipments during the year under review were the greatest since 1930. Of the output in 1937 properties in the Province of Cuebec contributed 5,617 tons, worth \$77,640 while the balance of Canadian production originated in British Columbia.

In 1937 the consumption of oxide or purifying materials by the Canadian coke and cas industries was estimated at \$40,414 while relatively large quantities of iron oxides including others, siennas and umbers were used in Canada for the manufacture of paints and pigments.

Imports into Genada of others, others earths, siemnas and umbers totalled 1,623 short tons valued at \$56,034 in 1937 and of these 1,101 short tons worth \$55,510 came from the United States, 289 tons at \$8,952 from France and 173 tons at \$8,353 from the United Kingdom.

The number of operators comprising the Canadian Iron Oxides Industry in 1937 totalled six, of which five reported commercial shipments during the year. In Quebec the minerals were shipped from deposits occuring at St-Adelphe, Almaville, La Pointe du Lac and Red Mill in Champlain county. At Lacoste in the same province the Iron Oxide Products Co. Ltd., commenced the construction of a new plant with an estimated capacity of ten tons per day. Production of ochres or bog iron in British Columbia in 1937 came entirely from deposits situated near Mons; shipments from here were consigned solely to gas plants located in Vancouver and Victoria.

Mineral pigments have been produced in Canada for many years. In 1351 an important deposit of ochre was worked in Quebec at Pointe du Lac, St. Maurice county. These pigments, as produced in Canada in 1886 and classified as iron oxides, amounted to 350 tons valued at \$2,350. The annual variation in production has been considerable since that date; the low point for the industry being reach in 1890 when 275 tons were extracted, while the maximum output, 19,128 tons, valued at \$157,909, was attained in 1920. The mineral in the crude condition as shipped by Canadian producers is utilized as a purifying agent in the manufacture of heating or illuminating gas, while the calcined or higher grades are consumed in the paint and pigment industries.

In 1937 the Chemical Trade Journal, London, announced that the output of iron oxides in Germany had increased considerably during the last two years, due partly to the improved methods that had been adopted for the economic utilization of all kinds of iron liquor and chemical waste materials. Iron oxide is now used in greater quantities in Germany as a substitute for red lead as rust proofing and

corrosion resistant medium. Production figures are not available but the expansion in output is indicated by the sharp reduction in imports which dropped from 5,385 metric tons in 1934 to 90 metric tons in 1936; exports on the other hand, advanced gradually from 10,410 metric tons in 1934 to 13,696 in 1936.

(a) Oxide or purifying materials.

(c) Ochres, siennas and umbers.

(b) Iron oxide pigments.

(d) Data not available.

NOTE: A classification of iron oxide colours is contained in the Bureau of Statistics annual Mineral Production report for 1936.

PRICES - Canadian - October, 1938 - (x)

Tron Oxides - Red 2 cents to $6\frac{1}{2}$ cents per pound.

Yellow 5 cents to $8\frac{3}{4}$ cents per pound.

Brown 5 cents to $6\frac{1}{2}$ cents per pound.

Black $3\frac{1}{2}$ cents to $7\frac{1}{2}$ cents per pound.

Jiennas 5 cents to $7\frac{1}{2}$ cents per pound.

Univers $4\frac{1}{4}$ cents to 5 cents per pound.

(x) Canadian Chemistry and Metallurgy, Toronto)

PRICES - United States - November, 1938 -

Iron Oxide per pounds standard (No. 1 quality) Spanish red, 3 to 4 cents nominal; constic earth $2\frac{1}{2}$ to $4\frac{1}{2}$ cents.

Othre per ton, f o b Georgia mines; \$19 in sacks; \$22.50 in barrels. Buff clay, 98 per cent through 325 mesh, \$19. F.O.B. Virginia, dark yellow, 300 mesh, 60 per cent ferric oxide, in jute bags, \$19.50. (x)
