### LETTER OF TRANSMITTAL.

Dr. Eugene Haanel,
Director of Mines,
Department of Mines, Ottawa.

Sar, I beg to hand you, herewith, the Annual Report on the Mineral Production of Canada, giving revised statistical information descriptive of the mining and metallurgical production in Canada during the calendar year 1912.

A preliminary report on the mineral production during 1912 was sent to press February 27, 1913, and issued within the following week.

Parts of the present report—including a "General Summary of the Mineral Production in Canada during 1912," "Report on the Production of Iron and Steel in Canada during 1912," "Report on the Production of Copper, Gold, Lead, Nickel, Silver, Zinc, and Other Metals in Canada during 1912," "Report on the Production of Coal and Coke in Canada during 1912," and "Report on the Production of Cement, Lîme, Clay Products, Stone, and Other Structural Materials in Canada during 1912"—have already been published as separate bulletins.

In the preparation of this report, Mr. Cosmo T. Cartwright has again devoted special attention to the metalliferous subjects, having prepared the special chapters on gold, silver, copper, lead, nickel, zinc, and miscellaneous metallic minerals, and Mr. J. Casey has given particular care to the compilation of the statistics.

Free use has been made of the reports published by the Provincial Bureaus of Mines; and grateful acknowledgment is made of the hearty co-operation of mine and smelter operators who have, with few exceptions, cheerfully complied with our requests, and furnished the department with statistics and information regarding their operations.

I have the honour to be, Sir, Your obedient servant,

(Signed) John McLeish.

Division of Mineral Resources and Statistics, October 15, 1913.

Come:— Production in Canada, exports and imports; production in Nova Scotia, Alberta, and British Columbia	215
FELDSPAR:— Production in Canada, exports, operating companies	220
GRAPHITE:  Production in Canada, exports and imports; artificial graphite, list of operators	222
Gypsum:— Production in Canada, exports and imports; production in Nova Scotia, New Brunswick, Ontario, and Manitoba; operating companies	226
Manganese:— Production, exports and imports	234
Mica:— Production in Quebec and Ontario, exports; consumption in United States, operating companies	236
MINERAL PIGMENTS:— Ochres; production, exports and imports Barytes; production and imports	241 243
MINERAL WATER:— Production, and imports, list of operators	245
NATURAL GAS:— Production in Quebec, Ontario, and Alberta, list of operators	247 252
Petroleum:— Bounty; production in Ontario, and New Brunswick, refined oils inspected; exports and imports	253
PHOSPHATE:— Production in Quebec and Ontario; exports	263
Pyrites:— Production in Quebec and Ontario; exports; imports of brimstone and sulphur, operators	265
Production in Ontario; exports, imports, and consumption; operating companies	268
MISCELLANEOUS: — Actinolite, arsenic, chalk and whiting, fluorspar, magnesite, quartz, and talc.	273
STRUCTURAL MATERIALS AND CLAY PRODUCTS.	
Cement: Production, exports, imports, consumption; operating companies	282
CLAY PRODUCTS:— Building, paving and ornamental brick: fireclay, and fireclay products; pottery, sewerpipe, tiles, etc. Production, exports and imports	293
Production by provinces; exports and imports	319
Sand-Lime Brick:— Production	323
Sand and Gravel: Production, exports and imports	325
SLATE:— Production, exports and imports	327
Stone:— Granite and other igneous rocks, limestone, marble, and sandstone production, exports and imports	320

### EXPLANATORY NOTES.

The term "ton" used throughout this report signifies a ton of 2,000 pounds; while the year referred to means calendar year, unless otherwise stated. The Government fiscal year formerly ended on the 30th of June; but now terminates on the 31st of March. This change took place in 1907, hence the fiscal period ending March 31, 1907, covers only nine months.

Statistics of exports and imports given throughout this report are compiled from the reports of Trade and Navigation, published by the Customs Department.

The term "production" used throughout this report may in general be interpreted as meaning the quantity sold or shipped. Mineral products mined or manufactured, but not sold or shipped, at the end of the year, are not included as "production." An exception to this usage will be found in reference to pig iron, in which case the statistics of production represent the quantities made.

The value of the metallic minerals produced, whether refined in Canada or not, is calculated on the basis of the average price of the metal in some recognized market. New York prices have usually been taken as the standard. In the case of lead, however, the New York price is so much higher than that of London, that the Montreal price—about midway between these two—is now used. The value of non-metallic products is given as at the mine or point of shipment.

# MINERAL PRODUCTION OF CANADA

During the Calendar Year

1912

### General Summary.

Canada's progress and growth in industrial development is strongly reflected in the statistical record of her mineral production. An annual record has been published since 1886, in which year the total value of the production was a little in excess of ten million dollars, or \$2.23 per capita of population. In 1912 the value of the production according to revised statistics now completed was \$135,048,296, or nearly \$19 per capita, the preliminary record published in March last showing a value of \$133,127,489 having been exceeded by nearly two million dollars.

Comparing last year's production with that of the years immediately preceding we find an increase over the 1911 value of output of \$31,827,302 or 30.8 per cent. It will be remembered, however, that the mineral output in 1911 was somewhat restricted owing to long extended labour disputes in the coal mines of Alberta and British Columbia, and was less than that of 1910, in which year the production was valued at \$106,823,623 or \$14.93 per capita, and the highest record up to that year. Compared with 1910 the production in 1912 still shows an increase in total value of \$28,224,673 or 26.5 per cent, and an increase in per capita production from \$14.93 to \$18.27 or 22.3 per cent.

<sup>\*</sup>Short tons throughout. (a) The metals copper, lead, nickel, and silver are for statistical and comparative purposes valued at the final average value of the refined metal. Pig iron, zinc ore, and cobalt oxides are valued at the funnace or spot, and non-metallic products at the mine or point of shipment. (b) Copper content of smelter products and estimated recoveries from ores experted, at 16:341 cents per pound, in 1912; and 12:376 cents per pound in 1911. (c) The total production of pig iron in Canada in 1912 was 1,014,587 tons valued at \$14,509,999, of which it is estimated 978,232 tons valued at \$14,100,113 should be credited to imported ores; in 1911, the total production was 917,535 tons valued at \$12,307,125, of which \$75,349 tons valued at \$11,693,721 are credited to imported ores. (d) Refined lead and lead contained in base bullion exported at 4:467 cents per pound in 1012, and 3:480 cents in 1911, the average prices in Montreal. (e) Nickel content of matter produced valued at 30 cents in 1912 and 1911. (Increasing quantities of nickel-copper matte are now being used in making monel metal which is sold at a price much below that of refined nickel). The value of the nickel contained in matte, as returned by the operators, was about 10 cents per pound for both years. (f) Estimated recoverable silver at 60:835 cents per onnce in 1912, and at 53:394 cents in 1911. (g) Gross returns for sale of gas. (h) Quantity on which bounty was paid and valued at \$1,418 per barrel in 1912, and at \$1.22\frac{1}{2} in 1911. (k) In 1912 and 1911 figures as reported by the producers, which differ slightly from those of the Trade and Navigation reports.

<sup>(</sup>n) In 1911, exports; in 1912, partial record only of production.

The detailed comparative statement of production during the years 1911 and 1912, shown in the preceding table, is a gratifying indication of the fact that the Canadian mineral industry in 1912 has had by far the most successful year in its history.

This progress is all the more satisfactory because it is evidently due to a widespread and substantial development of the country's mineral resources. The only new camp of importance to contribute largely to the year's output was Porcupine, the gold production of which was about one and three-quarter million dollars. A slight scarcity of labour was reported, particularly in connexion with the asbestos and clay working industries. There were comparatively few labour disputes to interfere with output, the principal difficulties being a strike of coal miners on Vancouver island, beginning in September, and a labour dispute at Porcupine toward the latter part of the year. The actual output of coal and gold were, however, but slightly affected thereby.

A substantial increase in price in most of the metals, which took place early in the year and continued throughout, had a very important bearing on the year's operations, and contributed largely to the increased value of the output.

A feature of particular interest during the year has been the continued and extended development of ore reserves. The satisfactory results from these operations, particularly in the case of the nickel-copper ores of the Sudbury district, the Porcupine gold ores of Ontario, and a number of the copper and lead deposits of British Columbia, point to much greater annual outputs in the future.

Extension of ore smelting and refining facilities, and in a number of cases special improvements in methods of practice, have also been important factors in the year's operations.

In considering the total value of the mineral production as shown in the general table, due weight should be given to the basis on which the statistics are compiled. It is very difficult to draw a fine line of distinction between what may be termed the first or mine product and the subsequent products resulting from the treatment or manufacture of the mine products, so that in the end a compromise is a practical necessity. Thus in the tabular statement given the quantities of the metals shown are in general the quantities actually recovered or estimated as recovered from the ores shipped from the mines during the year, and the values placed upon them are based on the value of the refined metal in a recognized market. Non-metallic products are valued as at the mine, except in the case of clay products, lime, and cement, for which it appears more feasible to use the manufactured products as a basis of compilation both of quantity and value, the first materials having practically no intrinsic value beyond the labour expended upon them.

On this basis then the production of metalliferous products in 1912 was valued at \$61,172,753, being 45.3 per cent of the total mineral output, and an

increase in value over the previous year of \$15,067,330, or 32.7 per cent. The value of the production of non-metalliferous products (excluding structural materials and clays) in 1912 was \$45,080,674, being 33.38 per cent of the total mineral output, and an increase of \$10,674,714, or 31 per cent, over the value of the production in 1911.

The value of the production of clay products, lime, and stone, and other similar structural materials in 1912, was \$28,794,869, or 21.3 per cent of the total production, and an increase of \$6,085,258, or 26.8 per cent over the 1911 output.

It will be observed that these three classes of products maintained very nearly the same relative proportion of total output as in 1911.

Coal, which has for a number of years past been the most important product in point of value, maintained its position in 1912, contributing 26.6 per cent of the total value, as against 25.6 per cent in 1911. Silver was next in importance in both years, accounting for 14.4 per cent of the total in 1912 as compared with 16.8 per cent in 1911. Nickel, copper, and gold followed in the order named in 1912, each being credited with between 9 and 10 per cent. Clay products contributed 7.62 per cent, and cement 6.74 per cent. Copper advanced from seventh place in value of production in 1911 to fourth position in 1912.

In the case of iron only the amount of pig iron produced from Canadian ore is included in the general total. There is an important production of pig iron from imported ore (shown in the footnotes of the general table) and the total value thereof in 1912 exceeds that of the production of any other metal, with the exception of silver. There is also a large production of aluminium from imported ores for which no value is included in the general table of production.

The prices of metals upon which the value of the production directly depends showed in several cases important increases in the beginning of the year, which were well maintained throughout.

The average prices of nearly all metals were higher in 1912. Copper advanced from 12-376 cents per pound to 16-341 cents, an increase of 3-965 cents, or 32 per cent. The average price of lead in Montreal increased from 3-48 cents to 4-467 cents per pound, a gain of 0-987 cent, or 28 per cent.

Silver advanced from 53-304 cents to 60-835 cents per ounce on the New York market, a gain of 7-531 cents, or over 14 per cent.

The average price of spelter in New York increased from 5.768 cents per pound to 6.943 cents in 1912, and tin from 42.281 cents per pound in 1911 to 46.096 cents per pound in 1912.

<sup>\*</sup> Quotations furnished by Messrs, Thomas Robertson & Company, Montreal, Que.

With the exception of petroleum every important mineral mined in Canada shows an increased production in 1912, in so far as value is concerned. In the case of silver only is there a decrease in quantity, and this slightly less than 2 per cent, the increase in total value of silver being due to the much higher price obtained for the metal during the year. Among the metals, increases in quantity of output are shown as follows: pig iron 10.5 per cent; gold 28 per cent; copper 40 per cent, and lead 50 per cent. On account of the generally higher prices of the metals the increases in total value of output considerably exceed the increases in quantity, and are as follows: silver 12 per cent, nickel 31 per cent, copper 85 per cent, and lead 93 per cent.

The most important increases amongst non-metallic products are in coal, asbestos, gypsum, natural gas, and all of the structural materials. Coal shows an increase of 28 per cent in tonnage, asbestos 10 per cent, gypsum 11 per cent, natural gas 31 per cent in number of cubic feet. Cement increased 25 per cent in quantity and 19 per cent in total value, clay products 26.5 per cent in value, stone 9.2 per cent in value, and lime 12.5 per cent in quantity and 21.5 per cent in value.

It is a matter of regret to have to report a continued decrease in the production of petroleum. The Canadian output of this product a few years ago was about 50 per cent of domestic consumption. At the present time not over 5 per cent of Canada's consumption of petroleum and its products is derived from domestic sources.

### EXPORTS AND IMPORTS.

A very large portion of the mineral production of Canada is exported for consumption or refining outside of Canada. On the other hand considerable quantities of mine products, chiefly those which have been refined or subjected to partial treatment, or in the form of manufactured goods ready for consumption, are imported.

The total value of the exports of products of the mine, including direct mine products and manufactures thereof, in 1912 was \$68,591,225, as compared with \$52,546,593 in 1911. This value includes for 1912 mine products to the value of \$54,349,640, and manufactures valued at \$14,241,585. Practically the whole of the Canadian production of copper, nickel, and silver is exported, also a very large proportion of the production of gold, asbestos, and mica. There are also considerable exports of coal. These items alone contribute about 95 per cent of the value of the mine products exported. Manufactures of mine products exported consist chiefly of iron and steel goods, aluminium, calcium carbide, lime, acetate of lime, and coke.

The United States is the chief destination of Canada's mine exports, about 80 per cent having been exported to that country during the fiscal year 1911-1912, and about 13.4 per cent to Great Britain.

A great variety of mineral products, chiefly in a manufactured or semimanufactured condition, are annually imported into Canada, and these imports
are increasing with much greater rapidity than is Canada's domestic mineral
production. The total value of such imports during the calendar year 1912 was
\$233,924,270, as compared with imports valued at \$181,773,708 in 1911, and
\$147,305,012 in 1910. Of the total imports in 1912 nearly \$50,000,000 in value
was made up of the cruder forms of mineral products such as coal, ores of metals,
diamonds unset and bort, asphaltum, etc., as against \$48,000,000 for similar items
in 1911. The imports of iron and steel and manufactures thereof in 1912 were
valued at \$124,376,986, as against \$93,171,817 in 1911, and \$75,758,594 in 1910.
Imports of the metals, aluminium, antimony, copper, gold, silver, lead, platinum,
tin, and zinc, and manufactures thereof, and metallic alloys, reached a total
value of over \$27,000,000, as compared with \$19,500,000 in 1911, petroleum and
products of, \$11,858,533, as against \$6,009,730 in 1911; clays and clay products,
\$6,592,537, as against \$5,216,544 in 1911.

It will thus be seen that over 50 per cent of the imports represents iron and steel, and that the increased imports were chiefly in iron and steel and other metals, and in petroleum.

As has already been pointed out in previous reports the great excess of imports over exports would seem to indicate the existence of large opportunities for the development not only of Canada's mineral production, but also of many manufacturing industries which utilize mine products as raw materials.

No matter what Canada's development in industrial activity may be in the future, it seems certain that there must always be a large and mutually advantageous interchange of trade between this country and our neighbour to the south. Thus, notwithstanding Canada's possession of large supplies of coal, both in the east and in the west, the great central provinces of the country, at present the most highly populated, are situated nearer the coal fields of Pennsylvania and Ohio, and derive their chief supplies from that source, while similarly, British Columbia and Alberta coal is finding a considerable market in the adjacent

states of the United States. Our southern neighbours have developed the largest iron and steel industry of any of the world powers, and possess highly developed industries in the treatment and refining of metals of all kinds, and it is perhaps but natural that we send to them the greater part of our metal ores and smelter products, and take from them the refined and manufactured products.

In the case of lead Canada now refines practically the whole of the domestic ore production, and the exports in 1912 were insignificant. Similar development in the future will no doubt result in the refining in Canada of copper, nickel, zinc, and other metals. In like manner, the continued large export of crude warefined ores and the corresponding imports of refined and manufactured products still point to opportunities for the development of industries for the treatment, refinement, and manufacture of non-metallic products.

<sup>(</sup>a) In 1911 included in error of metals, N.O.P.; (b) nine results only; (c) includes iron one in 1911.

### METALLIC ORES AND PRODUCTS.

Antimony.—The production of antimony during the past two years was limited to a few pounds of refined antimony recovered at the lead refinery at Trail, B.C. Shipments of antimony ore in 1910 were reported as 364 tons, valued at \$13,906, whilst there was no production of refined antimony in 1910. There is no export of antimony ore recorded in 1912, as against 50 tons valued at \$4,946, in 1911. The imports of antimony or regulus thereof, in 1912, were 998,045 pounds, valued at \$60,456, and of antimony salts 55,683 pounds, valued at \$7,197, or a total value of imports of \$67,653. In 1911, the imports were antimony and regulus of 561,046 pounds, valued at \$36,405, and antimony salts 18,420 pounds, valued at \$2,418, or a total value of \$38,823.

Cobalt.—Cobalt oxide and cobalt material are being produced in Canadian smelters, the production in 1912 of cobalt oxide and nickel oxide being 349,056 pounds, valued at \$156,256, and of cobalt material and mixed cobalt and nickel oxides 1,285,280 pounds, valued at \$163,988. During 1911, the shipments included 154,174 pounds of cobalt and nickel oxide, and 1,260,832 pounds of cobalt material and mixed cobalt and nickel oxides, the value being \$221,690.

Copper.—The production of copper contained in blister, matte, or ore, which was practically all exported, was 77,832,127 pounds in 1912, valued at \$12,718,548, as compared with 55,648,011 pounds in 1911, valued at \$6,886,998.

The exports in 1912 were reported as 78,488,564 pounds, valued at \$9,036,479, as against exports of 55,287,710 pounds, valued at \$5,467,725, in 1911. The total imports of copper in 1912 were valued at \$7,047,356; and included crude and manufactured copper to the extent of 42,832,747 pounds, valued at \$6,741,895, together with other manufactures of copper of which the quantity is not recorded, valued at \$305,461. The copper imports in 1911 were valued at \$4,936,769, including 37,352,237 pounds of crude and manufactured copper, valued at \$4,721,480, and other copper manufactures of which the quantity is not recorded, valued at \$215,289.

Gold.—The total value of the production of gold in 1912 was \$12,648,794, representing 611,885 fine ounces, as compared with \$9,781,077, representing 473,159 fine ounces of metal in 1911.

The Yukon placer production in 1912 was 267,988 fine ounces, valued at \$5,539,808.

Of the total production in 1912 about \$6,106,677 were derived from alluvial workings; \$2,270,331 as bullion from milling ores, and \$4,271,786 from ores and concentrates sent to smelters. In 1911, \$5,014,207 were derived from alluvial workings; \$513,991 as bullion from milling ores, and \$4,252,879 from ores and concentrates sent to smelters.

The exports of gold-bearing dust, quartz, nuggets, and gold in ore, etc., in 1912, were valued at \$10,014,654, as against \$7,493,523 in 1911.

The imports of gold coin during the calendar year 1912 were \$7,496,492, and of gold bullion \$1,360,735.

Pig Iron.—The total production of pig iron in Canadian blast furnaces in 1912 was 1,014,587 tons, valued at \$14,550,999, of which it is estimated 978,232 tons, valued at \$14,100,113, should be credited to imported ores, and 36,355 tons, valued at \$450,886, to domestic ores. In 1911 the total production was 917,535 tons, valued at \$12,307,125, of which 875,349 tons, valued at \$11,693,721, should be credited to imported ores, and 42,186 tons, valued at \$613,404, to domestic ores.

The exports of pig iron, including ferro-products, in 1912, were 6,976 tons, valued at \$310,702, as against 5,870 tons, valued at \$271,968, in 1911. The imports of pig iron in 1912 were 272,565 tons, valued at \$3,511,599, ferromanganese, etc., 19,810 tons, valued at \$469,884, and charcoal pig 115 tons, valued at \$1,370, as compared with imports in 1911 of pig iron 208,487 tons, valued at \$2,610,989, and ferro-manganese, etc., 17,226 tons, valued at \$429,465.

The total exports of iron and steel and manufactures thereof, in 1912, were valued at \$10,682,484, as against \$9,907,281 in 1911. The imports of iron and steel and manufactures thereof during the calendar year 1912 were valued at \$124,376,986, as compared with \$93,171,817 during the calendar year 1911.

Iron Ore.—The total shipments of iron ore from Canadian mines in 1912 were 215,883 tons, valued at \$523,315, as compared with 210,344 tons, valued at \$522,319, in 1911. The exports of iron ore in 1912 were 118,129 tons, valued at \$382,005, as against 37,686 tons, valued at \$133,411, in 1911. The quantity of imported iron ore used in Canada in 1912 was about 2,019,165 tons, as compared with 1,628,368 tons of imported ore used in 1911.

Lead.—The production of lead in 1912 was 35,763,476 pounds, valued at \$1,597,554, as against 23,784,969 pounds, valued at \$827,717, in 1911. The exports of lead in 1912 were: lead in orc, etc., 299,240 pounds, valued at \$8,193; while in 1911 the exports were: lead in ore, etc., 65,100 pounds; pig lead, 71,961 pounds—total, 137,061 pounds. The total value of the imports of lead and manufactures of, in 1912, was \$1,806,221, as compared with imports in 1911, valued at \$1,049,276.

Nickel.—The production of nickel contained in nickel-copper matte produced in Canada and exported for refinement was, in 1912, 44,841,542 pounds, as compared with a production of 34,098,744 pounds in 1911. During 1912 there were smelted 725,065 tons of ore, producing 41,925 tons of matte, as against 610,834 tons of ore smelted in 1911, producing 32,607 tons of matte. Small quantities of nickel oxide are also produced in connexion with the treatment of the Cobalt District silver ores. The exports of nickel contained in ore, matte, etc., during 1912, were 44,221,860 pounds, valued at \$4,661,758: being 5,072,867 pounds to Great Britain and 39,148,993 pounds to the United States. In 1911 the exports were 32,619,971 pounds, valued at \$3,676,396: being 5,023,393 pounds

to Great Britain and 27,596,578 pounds to the United States. The imports of nickel and nickel anodes in 1912 were valued at \$23,125, as against a value of \$34,199 imported in 1911.

Silver.—The production of silver contained in bullion, or estimated as recovered from mattes and ore, etc., exported, was in 1912, 31,955,560 fine ounces valued at \$1,440,165, as compared with a production of 32,559,044 fine ounces, valued at \$17,355,272, in 1911. About 91.4 per cent of the production in 1912 was derived from "Cobalt District" of Ontario. The production of silver in 1905 was only 6,000,023 ounces, and in 1900, 4,468,225 ounces. The exports of silver contained in ores, mattes, etc., in 1912, were 34,911,922 ounces, valued at \$19,494,416; as against exports of 31,216,725 ounces, valued at \$15,807,366, in 1911. The imports of silver bullion during the calendar year 1912 were valued at \$1,100,344, as compared with bullion imports of \$847,645 in 1911.

Zinc.—The shipments of zinc ore in 1912 were 6,415 tons, valued at \$215,149, as compared with shipments of 2,590 tons, valued at \$101,072, in 1911. The total value of the imports of zinc and manufactures of zinc, in 1912, was \$1,824,519, as compared with imports, valued at \$1,227,660, in 1911.

### NON-METALLIC PRODUCTS.

Actinolite.—A production of 92 tons, valued at \$1,000, was reported in 1912, as compared with 67 tons, valued at \$736, in 1911.

Arsenic.—Smelter returns show a production in 1912 of 2,045 tons of arsenious oxide, valued at \$89,262, as compared with a production in 1911 of 2,097 tons, valued at \$76,237.

The exports of arsenic in 1912 were 1,924 tons, valued at \$101,310, as against 2,063 tons, valued at \$81,761, in 1911. The imports of arsenious oxide in 1912 were 76,528 pounds, valued at \$1,722, as compared with 7,338 pounds, valued at \$158, in 1911. The imports of sulphide of arsenic in 1912 were 451,928 pounds, valued at \$19,431, and in 1911, 330,170 pounds, valued at \$6,665.

Asbestos.—The shipments of asbestos in 1912 were 111,561 tons, valued at \$3,117,572, and of asbestic, 24,740 tons, valued at \$19,707. The shipments in 1911 were 101,393 tons, valued at \$2,922,062, and of asbestic 26,021 tons, valued at \$21,046. The shipments in 1912 consisted of 5,662.9 tons of crude asbestos, valued at \$890,351, and 105,898 tons of mill stock, valued at \$2,227,221. Considerable quantities both of crude and of mill stock were held in manufacturers' hands at the close of the year.

Exports in 1912 were 88,008 tons, valued at \$2,349,353, as against 75,120 tons, valued at \$2,067,259, in 1911.

Imports and manufactures of asbestos in 1912 were valued at \$461,449, and in 1911, \$319,815.

Chromite.—During 1912 no shipments of chromite were reported. Shipments from stock in 1911 were 157 tons, valued at \$2,587.

Coal.—The production of coal in 1912 was 14,512,829 tons, valued at \$36,019,044, as against 11,323,388 tons, valued at \$26,467,646, in 1911. The exports of coal in 1912 were 2,127,133 tons, valued at \$5,821,593, as compared with 1,500,639 tons, valued at \$4,357,074, in 1911. The total imports of coal in 1912 were 14,595,810 tons, valued at \$39,478,037, as against imports in 1911 of 14,558,892 tons, valued at \$39,292,591.

The 1912 imports included 8,491,840 tons of bituminous round and run of mine coal, valued at \$16,846,727; 4,184,017 tons of anthracite and anthracite dust, valued at \$20,080,388; and 1,919,953 tons of bituminous slack, such as will pass through a \$" screen, valued at \$2,550,922.

In 1911 the imports included 8,905,815 tons of bituminous round and run of mine, valued at \$18,407,603; 4,020,577 tons of anthracite and anthracite dust, valued at \$18,794,192; and 1,632,500 tons of bituminous slack, such as will pass through a \$" screen. The consumption of coal in 1912 was approximately 26,984,800 tons, as against 24,247,698 tons in 1911.

Coke.—The total quantity of oven coke made in 1912 was 1,406,028 tons, the quantity sold or used was 1,411,229 tons, valued at \$5,164,531; as compared with 954,388 tons made and 935,651 tons sold or used, valued at \$3,630,410, in 1911. The quantity of coal charged to coke ovens, in 1912, was 2,053,807 tons, as compared with 1,409,844 tons in 1911. The exports of coke in 1912 were 57,744 tons, valued at \$252,763, and, in 1911, 9,852 tons, valued at \$39,823. The imports of coke in 1912 were 496,830 tons, valued at \$1,358,451, as compared with imports of 751,389 tons, valued at \$1,843,248, in 1911.

Corundum.—The total sales of grain corundum in 1912 were 1,960 tons, valued at \$239,091, as compared with sales in 1911 of 1,472 tons, valued at \$161,873. Exports for 1912 were 1,928 tons, valued at \$205,819.

Feldspar.—Shipments of feldspar in 1912 were 13,733 tons, valued at \$30,916, as compared with 17,723 tons, valued at \$51,939, in 1911. The exports are recorded as 12,779 tons, valued at \$44,114, in 1912, and 16,150 tons, valued at \$56,085, in 1911.

Fluorspar.—About 40 tons, valued at \$240, were shipped from the mine in 1912, and 34 tons, valued at \$238, in 1911. Canadian furnaces in 1912 used 9,709 tons of fluorspar. Imports of hydro-fluo-silicic acid were 302,918 pounds, valued at \$24,891.

Graphite.—Shipments of crude and milled graphite during 1912 totalled 2,060 tons, valued at \$117,122, as against 1,269 tons, valued at \$69,576, in 1911. The production of artificial graphite in 1912 was reported as 1,151 tons, as compared with 1,086 tons in 1911.

Exports of plumbago in 1912 are reported as 1,654 tons, valued at \$70,763, and manufactures of plumbago valued at \$58,920. Exports in 1911 were: plumbago 813 tons, valued at \$43,249, and manufactures of plumbago valued at \$33,956. Imports of graphite in 1912 were valued at \$155,484, and included: plumbago not ground \$7,249; blacklead \$9,587; plumbago ground and manufactures of, \$56,324; and crucibles of clay or plumbago, \$82,324. In 1911 the imports were valued at \$112,946, including: plumbago not ground \$4,940; blacklead \$14,172; plumbago ground and manufactures of, \$37,030; and crucibles of clay or plumbago \$56,814.

Grindstones.—The production of analyticutes, acribestones, and wood pulpstones, in 1912, was 4,412 tons, valued at \$52,090, as compared with 4,566 tons, valued at \$52,942, in 1911. The exports in 1912 were manufactured grindstones valued at \$26,535; the exports in 1911 were stone for the manufacture of grindstones, 15 tons valued at \$22, and manufactured grindstones valued at \$29,184. The imports of abrasives in 1912 included: grindstones valued at \$112,020; burrstones, \$1,409; emery in bulk, crushed or ground, \$46,616; manufactures of emery, carborundum, etc., \$130,571; pumice stone, \$21,310; also iron sand, \$13,347; sandpaper, \$189,782. The 1911 imports comprised: grindstones valued at \$123,356; burrstones, \$1,642; emery in bulk crushed or ground, \$46,274, manufactures of emery, carborundum, etc., \$104,170; pumice stone, \$18,779; also iron sand, \$8,340; sandpaper, \$164,474.

Gypsum.—The total shipments of gypsum, crude and calcined, in 1912, were 578,458 tons, valued at \$1,324,620, as compared with shipments of 518,383 tons, valued at \$993,394, in 1911. The tonnage of gypsum mined or quarried in 1912 was 549,856 tons, and the quantity calcined 133,392 tons. In 1911, 495,979 tons of gypsum were mined or quarried and 76,718 tons calcined. The shipments in 1912 included: crude gypsum 453,577 tons, valued at \$525,345; ground gypsum 15,487 tons, valued at \$29,244, and calcined gypsum 109,394 tons, valued at \$770,031. In 1911 shipments comprised: crude gypsum 449,823 tons, valued at \$481,077; ground gypsum 7,149 tons, valued at \$23,125, and calcined gypsum 61,411 tons, valued at \$489,192. The exports of gypsum in 1912 were: 364,643 tons of crude gypsum, valued at \$423,208, and gypsum ground or calcined valued at \$6,495. The 1911 exports were: 362,102 tons of crude gypsum, valued at \$425,161, and gypsum ground or calcined valued at \$4,429.

The imports of gypsum in 1912 were valued at \$268,103, including: crude gypsum, 3,503 tons, valued at \$16,254; ground gypsum, 7,072 tons, valued at \$19,651, and plaster of Paris, 32,496 tons, valued at \$232,198. The total value of imports in 1911 was \$205,782, made up of: crude gypsum 2,035 tons, valued at \$11,792; ground gypsum 11,208 tons, valued at \$3,619; and plaster of Paris, 28,518 tons, valued at \$190,371.

Magnesite.—Shipments of magnesite in 1912 were 1,714 tons, valued at \$9,645, and in 1911, 991 tons, valued at \$5,531. Imports of magnesia in 1912 were 758,909 sounds, valued at \$29,641.

Manganese.—There was a shipment of 75 tons, valued at \$1,875, in 1912, as against 5½ tons, valued at \$300, in 1911. The exports in 1912 were 10 tons, valued at \$300, as against 4 tons, valued at \$225, in 1911. The 1912 imports included 1,256 tons manganese oxide, valued at \$27,707, as compared with 962 tons, valued at \$22,612, in 1911.

Mica.—The value of the mica production in 1912 as reported by mine operators was \$143,976, as compared with \$128,677 in 1911. The exports of mica in 1912 were 895,338 pounds, valued at \$334,054, as against 693,940 pounds, valued at \$242,548, in 1911.

Mineral Pigments.—Shipments of barytes in 1912 were 464 tons, valued at \$5,104, as against 50 tons, valued at \$400, in 1911. The production of iron others in 1912 was 7,654 tons, valued at \$32,410, as compared with 3,622 tons, valued at \$28,333, in 1911.

In 1912 the exports of barytes were 68 hundredweight, valued at \$114. The exports of iron oxides in 1912 were 3,016 tons, valued at \$34,513, as against 2,000 tons, valued at \$27,070, in 1911. The imports in 1912 were: ochres and ochrey earth and raw siennas, 1,737 tons, valued at \$40,165; and oxides, dry fillers, fire-proof umbers, and burnt siennas, 762 tons, valued at \$29,456, as compared with imports in 1911, comprising: ochres and ochrey earth and raw siennas 1,477 tons, valued at \$32,032; and oxides, dry fillers, fireproof umbers, and burnt siennas, 722 tons, valued at \$21,060.

Mineral Water.—The value of the production of mineral water in 1912 for which returns were received was \$172,465, as compared with a value of \$223,758 in 1911. The imports of mineral and aerated waters in 1912 were valued at \$273,698, as against a value of \$229,367 in 1911. The exports in 1912 were valued at \$4,667, as against \$12,952 in 1911.

Natural Gas.—The value of the production of natural gas in 1912 was 15,287 million cubic feet, valued at \$2,362,700, as compared with 11,644 million cubic feet, valued at \$1,917,678, in 1911.

Peat.—Shipments of peat for fuel purposes in 1912 were 700 tons, valued at \$2,900, as compared with 1,463 tons, valued at \$3,817, in 1911.

Petroleum.—The production of crude petroleum shows a further falling off in 1912, the production being 243,336 barrels or 8,516,762 gallons, valued at \$345,050; as compared with 291,092 barrels or 10,188,219 gallons, valued at \$357,073, in 1911.

Exports of refined oil in 1912 were 36,945 gallons, valued at \$6,147, and 489 gallons, valued at \$73, in 1911. There was an export in 1912 of naphtha and gasoline of 25,791 gallons, valued at \$4,261, and also an export of other oils, N.E.S. of 397,039 gallons, valued at \$119,686, which may have nucluded products of petroleum.

While the production has been decreasing the imports have been increasing; the total import of petroleum oils, crude and refined, in 1912, was 186,787,484 gallons, valued at \$11,858,533, in addition to 2,144,006 pounds of paraffin wax and candles, valued at \$119,520. The oil imports included: crude oil, 120,082,405 gallons, valued at \$3,996,842; refined and illuminating oils 14,748,218 gallons, valued at \$1,012,735; gasoline 40,904,598 gallons, valued at \$5,347,767; lubricating oils 6,763,800 gallons, valued at \$1,077,712, and other petroleum products 4,288,463 gallons, valued at \$423,477.

The total imports in 1911 were 116,892,689 gallons, valued at \$6,009,730, and 1,959,787 pounds of paraffin wax and candles, valued at \$106,424. The oil imports included: crude oil 71,653,251 gallons, valued at \$2,188,870; refined and illuminating oils, 13,690,962 gallons, valued at \$722,403; gasoline 23,338,773 gallons, valued at \$1,976,032; lubricating oils 5,308,917 gallons, valued at \$806,452, and other petroleum products 2,900,786 gallons, valued at \$315,973.

Phosphate.—Shipments of phosphate or apatite in 1912 were 164 tons, valued at \$1,640, as compared with 621 tons, valued at \$5,206, in 1911. There were no exports in 1912, while exports of 3 tons, valued at \$100, were reported in 1911. There was an export of phosphorus in 1912, of 543,620 pounds, valued at \$66,806. The imports of phosphate rock (fertilizer) in 1912 were valued at \$24,586; phosphorus, 13,807 pounds, valued at \$4,012, and manufactured fertilizers valued at \$580,351. The imports in 1911 included phosphate rock (fertilizer), valued at \$46, 217; phosphorus, 14,818 pounds, valued at \$4,384, and manufactured fertilizers valued at \$386,645.

Pyrites.—The production of pyrites in 1912 was 81,526 tons, valued at \$314,085, as compared with 82,666 tons, valued at \$365,820, in 1911. The exports of pyrites in 1912 were 5,938 tons, valued at \$11,935, as against exports of 32,102 tons, valued at \$120,585, in 1911. The imports of brimstone or sulphur in 1912 were 38,647 tons, valued at \$806,690, as against 21,931 tons, valued at \$446,491, in 1911.

Quartz.—The production of quartz in 1912 was reported as 100,242 tons, valued at \$195,216, compared with a production in 1911 of 60,526 tons, valued at \$83,865. There were imported during 1912, 629 tons of silex or crystallized quartz, valued at \$10,680, and 2,802 tons flint, valued at \$39,891; and in 1911, 394 tons of silex, valued at \$7,518, and 3,766 tons flint, valued at \$49,106.

Salt.—The total sales of salt in 1912 were 95,053 tons, valued at \$459,582 (exclusive of packages). The value of the packages used was \$224,696. In 1911 the sales were 91,582 tons, valued at \$445,004, and value of packages used \$198,789.

Exports of salt in 1912 were 289,150 pounds, valued at \$6,723, and in 1911, 454,600 pounds, valued at \$5,055. The total imports of salt in 1912 were valued at \$485,950, and included: 30,067 tons, valued at \$133,869, subject to duty; and 109,639 tons, valued at \$352,081, duty free. The 1911 imports were valued at

\$436,118, and included: 23,176 tons, valued at \$109,793, subject to duty; and 101,174 tons, valued at \$326,325, duty free.

Among the imports of soda products in 1912 are included: soda ash or barilla, 52,167,811 pounds, valued at \$421,959; soda bichromate, 584,424 pounds, valued at \$33,744; caustic soda in packages of 25 pounds or more, 14,544,545 pounds, valued at \$278,579; sal soda 9,996,562 pounds, valued at \$64,020; nitrate of, 83,989,303 pounds, valued at \$1,537,379, and sulphate of soda, 19,243,823 pounds, valued at \$97,768.

Talc.—The production of talc in 1912 was 8,270 tons, valued at \$23,132, as against 7,300 tons, valued at \$22,100. Imports of talc for the calendar year 1912 were 195 tons, valued at \$4,414.

Tripolite.—Thirty-eight tons of tripolite, valued at \$230, were shipped in 1912, and 20 tons, valued at \$122, in 1911.

### STRUCTURAL MATERIALS AND CLAY PRODUCTS.

Cement.—The total sales of cement in 1912 were 7,132,732 barrels, valued at \$9,106,556, as against 5,692,915 barrels, valued at \$7,644,537, sold in 1911, showing an increase of 1,439,817 barrels. The exports of cement in 1912 were valued at \$2,436, as compared with exports valued at \$4,067 in 1911.

The imports of cement in 1912 included: manufactures of cement valued at \$9,698; and Portland cement 5,020,446 hundredweight (1,434,413 barrels), valued at \$1,969,529. The imports in 1911 were: manufactures of cement, valued at \$7,430; hydraulic cement 26,655 hundredweight, valued at \$6,107; and Portland cement 2,316,707 hundredweight (661,916 barrels), valued at \$834,879. The consumption of Portland cement in Canada in 1912 was approximately 8,567,145 barrels, as compared with 6,354,831 barrels in 1911.

Clay Products.—The total value of the production of clay products in Canada in 1912 was \$10,575,709, as compared with a total value of \$8,359,933 in 1911. Brick and tile products alone were valued in 1912 at \$9,072,675, as against \$6,946,009 in 1911. The value of sewerpipe production in 1912 was \$884,641, as compared with \$812,716 in 1911. The only clay products exported in 1912 were 694,000 building brick, valued at \$8,493, and manufactures of clay valued at \$256; against 394,000 building brick, valued at \$3,977, and manufactures of clay valued at \$2,071. The total imports of clay products in 1912 were valued at \$6,592,540, and included: brick and tile valued at \$3,209,190; earthenware and chinaware \$3,094,956, and clays valued at \$288,394. The total imports in 1911 were valued at \$5,156,544, and included: brick and tile valued at \$2,369,761; earthenware and chinaware \$2,516,536, and clays valued at \$270,247.

Kaolin.—In 1912 a shipment of 20 tons valued at \$160 was reported.

Lime.—The total production of lime in 1912 was 8,475,839 bushels, valued at \$1,844,849, as compared with 7,533,525 bushels, valued at \$1,517,756, in 1911. The exports of lime in 1912 were valued at \$35,097, as against exports valued at \$39,536 in 1911. The imports of lime in 1912 were 329,925 barrels, valued at \$207,481, and in 1911, 228,538 barrels, valued at \$161,985.

Sand-Lime Brick.—The total sales of sand-lime brick in 1912 by 20 firms reporting were 96,448,402, valued at \$1,020,386, an average value of \$10.58 per thousand. The sales in 1911 by 16 firms reporting were 51,535,243 brick, valued at \$442,427, an average value of \$8.58 per thousand.

Slate.—The production of slate in 1912 was 1,894 squares, valued at \$8,939, and 1,833 squares, valued at \$8,248, in 1911.

The imports of slate in 1912 were valued at \$200,643, and included: roofing slate valued at \$88,911; school writing slate, \$39,858; slate pencils, \$6,978, and manufactures of slate, \$65,896. The imports in 1911 were valued at \$169,685, and included: roofing slate valued at \$83,075; school writing slate, \$35,049; slate pencils, \$6,036, and manufactures of slate, \$45,525.

Stone.—The total value of the production of stone of all kinds in 1912 was \$4,726,171, as compared with a value of \$4,328,757 in 1911. The value of stone exports in 1912 was \$33,242, as against \$28,335 in 1911; and the total value of stone imported in 1912 was \$1,467,143, as against imports valued at \$1,140,846 in 1911.

The production in 1912 included: granite, valued at \$1,373,119; limestone, \$2,762,936; marble, \$260,764, and sandstone, \$329,352. In 1911 the production of granite was valued at \$1,119,865, limestone, \$2,594,926; marble, \$162,783, and sandstone, \$451,183.

#### PRODUCTION BY PROVINCES.

A summary of the mineral production by provinces in 1911 and 1912 is shown in the accompanying tables, in the first of which the total production in the several provinces, and the percentage of each, are given for the past three years. This record shows some slight changes in the relative importance of the production of each. The only change in the order of magnitude of output is that Alberta, the production of which had exceeded that of Quebee in 1910, but fallen below in 1911, on account of its restricted coal output, again takes premier place in 1912. Ontario is still the largest contributor to the total, being credited with 38-5 per cent, or \$51,985,876; British Columbia comes second with 22 per cent, or \$30,076,635; Nova Scotia third with \$18,922,236, or 14 per cent; Alberta fourth with \$12,073,589, or nearly 9 per cent; and Quebec fifth with \$11,656,998, or 8-6 per cent. Manitoba, Saskatchewan, and New Brunswick, follow in the order named.

It should be remembered in dealing with these comparisons that Nova Scotia in the above record is given no credit on account of the large iron smelting and steel making industries at Sydney, New Glasgow, etc. The pig iron made here is entirely from imported ore and naturally is not credited as a Canadian mine output. The same remark applies to a large percentage of the pig iron production in Ontario, as well as to the production of aluminium in Quebec.

There was an increased output in each of the provinces in 1913, the largest gains being in Alberta and British Columbia.

In Nova Scotia both coal and gypsum mining were particularly active, though a reduced production of gold is reported. Copper and asbestos mining in Quebec contribute chiefly to the increase in that Province. Ontario had important increases in nickel and copper, but more especially in gold from the Porcupine district. This Province has a large output of non-metallic products, including cement, clays, etc. In Alberta coal mining has had a record year, exceeding in tonnage the British Columbia production. In the latter Province the principal increase was in copper, with gold, silver, lead, zinc, coal, and structural or building materials as important contributors.

The last table shows the total mineral production of Canada by provinces for the years 1889 to 1912 inclusive.

Mineral Production by Provinces, 1910, 1911, and 1912.

### MINE PRODUCTION.

The statistics of metalliferous production published in the tables preceding show in most cases the quantities of metals recovered or probably recoverable.

A general consideration of mine operations from the viewpoint of the actual tonnage of ore mined, the quantities concentrated, and the tonnage shipped to smelters is also of much interest.

The Mines Branch has been endeavouring to obtain from every mine operator in Canada an annual return with respect to:—

- (1) The number of men employed and wages paid.
- (2) The total tonnage of ores mined, the tonnage concentrated, and the quantities of concentrates produced.
- (3) The tonnage of ores or concentrates shipped and the net value thereof.
- (4) The quantities of metals as determined by settlement assays contained in the ores shipped, and the quantities of metals for which payment was made by the purchasing smelter or recovered by the operators' smelter.

There are unfortunately two industries in which it has not as yet been feasible to obtain a complete record. These are the production of placer gold on the one hand and of petroleum on the other. In both cases, while a record of production is available, there is no record as to the number of men employed or the amount paid in wages. With respect to the other industries, while it has not been possible to obtain returns from every mine operator, the missing returns usually represent comparatively small productions, and sufficient information is available to give a fairly close estimate of results.

The metalliferous ores mined in Canada at present fall naturally into a number of more or less broad groups as follows:—

- (1) Iron ores.
- (2) Milling gold ores, including certain dry ores shipped to smelters.
- (3) Silver and silver cobalt nickel ores of Ontario.
- (4) Nickel copper ores of Ontario.
- (5) Silver lead and zinc ores.
- (6) Copper-gold-silver ores (chiefly of British Columbia).

Statistics covering the years 1910, 1911, and 1912 are shown in tabular form herewith. Excluding placer and hydraulic gold workings the number of metalliferous mines shipping in 1912 was 163, as compared with 160 reported in 1911; the number of men employed in 1912 was 10,612 as against 9,622; wages paid \$10,113,578 compared with \$7,857,580 in 1911; tons of ore mined 4,194,517 in 1912 as against 3,195,330 tons the previous year; tons of ore, concentrates, or metal shipped, 3,360,432 in 1912 and 2,431,188 in 1911; total net value of shipments including placer gold \$46,018,233 in 1912 and \$34,760,513 in 1911.

In non-metalliferous mining, exclusive of stone quarries and clay pits, there were employed in 1912 an average of 33,954 men earning in wages \$23,877,781.

The tonnage mined, chiefly coal, was 17,165,628 and tons shipped 15,548,981 having a net value of \$45,080,674. There were employed in this class of mining in 1911 an average of 32,126 men, earning in wages \$18,469,420; the number of tons mined was 13,890,468; tons shipped 12,247,348, having a net value of \$34,405,960. The manufacture of cement, clay products, and lime, and the quarrying of stone, etc., employed in 1912 an average of 22,168 men, to whom were paid in wages \$11,511,120, and the net value of products shipped was \$25,794,869. These operations in 1911 engaged an average of 19,004 men, earning \$5.527,508 in wages, and the value of products shipped was \$22,709,611. Excluding the labour employed in placer gold mining and in the production of petroleum for which, as already explained, no record has been obtained, the total number of men engaged in the mining industry in 1912 was about 66,734 and wages paid \$45,502,479. In 1911 the number of men was 60,752 and wages 336,154,508. It should be remembered that this is a record only of shipping somes and does not include the labour employed in prospecting or in developing new properties, neither does it include any record of labour employed in the smelting and refining of ores, or in blast furnace operations.

The total net value of mine shipments and the products of cement, clay, and lime plants on the basis shown in these tables was \$119,893,776 in 1912, as compared with \$91,876,084 in 1911.

This value it will be observed is considerably less than that shown in the Table of Mineral Production given on page 6, the difference being due entirely to the fact that values accrued through metallurgical reduction and refining are not included in these tables, they being intended to present, as indicated in the title, mine products. The values given in these tables are in general those furnished by the operators. In certain cases where mining, smelting, and refining operations are carried on by the same operator, it becomes a matter of no small difficulty to satisfactorily subdivide profits among the various operations, particularly when there is no general market for the class of ores treated. The nickel copper ores of the Sudbury district may be cited as a typical example. The value of \$4 a ton placed upon this ore very probably does not include a sufficient proportion of the profits obtained in the ultimate refining.

### SMELTER PRODUCTION.

Statistics of the production of copper, lead, and silver smelters and refineries showing the tonnage of ore treated, the matte, blister, base bullion, or refined metal produced, etc., were collected for the first time by the Mines Branch in 1908 and were published in the report for that year. Similar returns covering each succeeding year have also been received through the courtesy of the various operating companies, a list of which follows:—

'The Canadian Antimony Co., St. George, N.B.

The Mond Nickel Co., Victoria Mines, Ont.

The Canadian Copper Co., Copper Cliff, Ont.

The Coniagas Reduction Co., Thorold, Ont.

The Deloro Mining and Reduction Co., Deloro, Ont.

The Canada Refining & Smelting Co., Ltd., Orillia, Ont.

The North American Smelting Co., Kingston, Ont.

The Consolidated Mining and Smelting Co. of Canada, Ltd., Trail, B.C.

The Granby Consolidated Mining, Smelting, and Power Co., Grand Forks, B.C.

The British Columbia Copper Co., Ltd., Greenwood, B.C.

<sup>1</sup> The Tyee Copper Co., Ltd., Ladysmith, B.C.

The aggregate quantities of ores and concentrates treated in these works during 1912 were 3,005,410 tons, as compared with 2,193,553 tons in 1911, an increase of about 37 per cent. The largest proportion of the total tonnage (over 70 per cent) consists of the copper-gold-silver ores of British Columbia, chiefly from the Boundary (Phoenix and Greenwood), Rossland, and Coast (Britannia and Texada island) districts. The nickel-copper ores of the Sudbury district, Ontario, contributed about 24 per cent of the tonnage, the balance being lead ores of British Columbia and silver cobalt ores of Ontario.

The quantities of these several classes of ores smelted during the past five years have been as follows:—

Year,	Nickel- copper ores.	Silver-cobalt ores,	Lead ores.	Copper-gold- silver ores.	Totals.
1908	$\begin{array}{c} 360,180 \\ 462,336 \\ 628,947 \\ 610,834 \\ 725,065 \end{array}$	7,182	53,455	1,797,488	2,218,395
1909		8,384	54,539	1,850,889	2,376,148
1910		9,466	57,549	1,987,752	2,683,714
1911		9,330	55,408	1,517,981	2,193,553
1912		8,097	59,932	2,212,316	3,005,410

The products obtained in Canada from the treatment of these ores include: pig lead produced at Kingston, Ont., refined pig lead and lead pipe produced at Trail, B.C.; and fine gold, fine silver, copper sulphate, and antimony produced

<sup>&</sup>lt;sup>2</sup> Not in operation during 1912.

from the residues of the Trail lead refinery; silver bullion, white arsenic, nickel oxide, and cobalt oxide produced in Ontario, from the Cobalt District ores. Refined antimony was produced in New Brunswick in 1909. In addition to these refined products, blister copper, copper matte, nickel-copper matte, cobalt material or mixed nickel and cobalt oxides are produced and exported for refining outside of Canada.

The aggregate results of smelting and refining operations may be summarized as shown in the next table. Unfortunately the figures cannot be taken to represent the total production from smelting ores mined in Canada, since considerable quantities of copper and silver ores are still shipped to other smelters outside of Canada for smelting.

It should also be explained that the figures include the results of the treatment in British Columbia of a small quantity of imported ores.

platinum group.

(4) Unrefined lead bullion carrying silver values.

(5) Cobalt material carrying nickel and silver values.

Nickel-Copper Ores.—These ores in the Sudbury district, together with a small tonnage from the Alexo mine in the district of Nipissing, Ontario, are treated in the smelters of the Canadian Copper Co., at Copper Cliff, and The Mond Nickel Company at Victoria Mines. The new smelter being constructed by the latter Company at Coniston was not in commission during 1912. A large portion of the ore is roasted in open heaps, before smelting.

The total quantity of ore mined during 1912 was 737,726 tons, and the quantity smelted was 725,065 tons. There was produced 41,925 tons of Bessemer matte containing 11,116 tons of copper and 22,421 tons of nickel. This is the largest production since the beginning of operations in 1886. In 1911 there was smelted 610,834 tons of ore, from which was produced 32,607 tons of Bessemer matte, containing 8,966 tons of copper and 17,049 tons of nickel.

Statistics of smelter production from these ores which are available since the commencement of this industry are shown in the following table:—

Smelter Production of the Nickel-Copper Ores of the Sudbury District.

Silver-Copper-Nickel-Arsenic Ores.—The first shipments of silver ores were made from the Cobalt district in 1904, and in 1906 the first works for the treatment of these ores in Canada were established by the Canadian Copper Co., at Copper Cliff, Ont. Subsequently plants were erected by the Coniagas Reduction Company at Thorold, the Deloro Mining and Reduction Co. at Deloro, and the

Canada Refining and Smelting Company at Orillia, at each of which nickel and cobalt oxides are recovered in addition to silver bullion and white arsenic. Other small plants have more recently been established at Kingston, North Bay, and Trout Lake.

A large proportion of the ore tonnage shipped from this district is still sent to smelters in the United States, although during the past two years there has been a growing tendency toward the treatment of these ores by cyanidation and the recovery of silver at the mine in the form of bullion. Thus we find a falling off, during 1912, in the production of silver at Canadian smelters and an increased amount of bullion produced at the mines.

The treatment of these ores in Ontario during the past four years has given the following results:—

		1909.	1910.	1911.	1912.
Ore treated	Tons.	8,384	9,466	9,330	8,097

<sup>†</sup> Fine ounces contained in silver bullion, fineness ranging from 850 to 998.

Lead Ores.—There were two lead smelting plants in operation in Canada in 1912, a small plant having been constructed at Kingston, Ontario, for the smelting of ores of the Frontenac and other lead mines in Ontario. During 1912 this furnace was blown in on British Columbian and imported ores and lead waste. The smelter at Trail, B.C., treated practically all of the lead ore mined in southern British Columbia, with the exception of a small tonnage that went to Kingston.

In the lead refinery at Trail, the bullion from the smelter is cast into anodes and re-deposited electrolytically upon cathode sheets of refined lead. The refined lead is cast into pigs or manufactured into lead pipe. The slimes from the tank room carry gold, silver, antimony, arsenic, and copper. The first two are recovered as fine metals, and the copper as copper sulphate. Antimony is also recovered, though not regularly, and bearing metal is manufactured.

The annual production of refined lead, fine gold and silver, and copper sulphate has been as follows:—

Calendar Year.	Refined lead	Fine gold.	Fine silver.	Copper sulphate.
1904 1905 1906 1907 1908 1909 1910 1911 1911	Lbs.  7,519,440 15,804,509 20,471,314 26,607,461 36,549,274 41,883,614 32,987,508 23,525,050 35,254,790	Ozs.  4,336 8,602 9,993 10,395 15,346 18,241 13,298 15,270 12,118	Ozs.  551,450 1,088,328 1,263,809 1,631,422 1,956,039 2,003,003 1,798,960 1,325,601 1,896,999	Lbs.  56,000 77,175 143,135 97,751 203,379 51,405 163,228 197,187 87,110

Gold-Silver-Copper Ores of British Columbia.—Of the four copper smelters in British Columbia, three were active during 1912. These were the Trail copper furnace of the Consolidated Mining and Smelting Company, treating the ores of the Rossland camp and other ores of the district; the Grand Forks plant of the Granby Consolidated Mining, Smelting, and Power Co., and the Greenwood plant of the British Columbia Copper Company, treating chiefly the low grade ores of the Boundary district.

On the coast the Tyee Copper Company's furnace at Ladysmith was idle throughout the year. A new smelter is being constructed at Anyox, Observatory inlet, Portland canal, by the Granby Company, to treat the ores of the Hidden Creek mines. It is expected that this smelter will be completed and in operation during 1913.

The aggregate production of British Columbia copper smelters during the past four years, including the foreign ores treated, was as follows:—

		1909,	1910.	1911.	1912.
Ore smelted. Smelter products— Matte. Blister Metallic content of matte and blister— Gold. Silver Copper.	Ozs.	1,850,889 11,597 14,239 198,898 612,164 37,581,884	1,987,752 11,519 13,918 197,181 636,140 36,890,283	1,517,981 11,320 10,710 175,189 585,836 29,855,868	2,212,316 6,727 17,069 184,815 686,171 36,174,185

Trail Smelter.—Statistics of the production of the Trail smelter, including both the copper and lead furnaces, have been published in the annual reports of the Company, the figures since 1906 having been as follows:—

### Production of Trail Smelter.

Year ending June 30.	Ore	METALS CONTAINED IN MATTE AND BULLION PRODUCED.				
	smelted.	Gold.	Silver.	Lead.	Copper.

1912	3,143,927	1,146,912	20,224,623	250,970,644	50,789,983	

Granby Smelter.—The Granby Smelter is situated at Grand Forks in the Boundary district and is operated by the Granby Consolidated Mining, Smelting, and Power Co. The ores treated are those of the Company's mines at Phoenix, together with a small tonnage of custom ore.

The Phænix ores are of particular interest because of the low tenor of their metal values, their self-fluxing character, and the large tonnage treated. The recovery of metals during the year ending June 30, 1912, as stated in the Company's annual report, was: copper 1.25 per cent; silver 0.29 ounces, and gold 0.043 ounces.

The first furnace of 300 tons capacity was completed in 1900, and since that date the capacity of the plant has been increased from time to time until at present there are eight furnaces with a total capacity of about 4,500 tons per day. The converter plant was first installed in 1902, and enlarged in 1909.

The quantities of ores smelted and the total production of metals, shown in the next table, are as published in the annual report of the Company.

The smelter was shut down between August 11 and December 20, 1911, owing to the coal strike in the Crowsnest Pass District mines and the resultant coke shortage, which accounts for the falling off in production during the Company's year ending June 30, 1912. Throughout the calendar year 1912, however, the plant was continuously operated and a larger tonnage treated than in any previous year.

## Ores Smelted and Metals Recovered at Granby Smelter.

Greenwood Smelter.—The plant of the British Columbia Copper Company at Greenwood, B.C., includes three large furnaces, having a total daily capacity of from 2,400 to 2,500 tons.

The last annual report of the Company covers the fiscal period from December 1, 1911, to December 31, 1912. Frederick Keffer, Acting General Manager, reports that "The smelter ran steadily throughout the year, handling a larger tonnage than for any equal period in its history. During the first two and a half months, until a sufficient supply of coke was secured for the entire plant, only two furnaces were operated. The total tons smelted for the thirteen months of the fiscal year were 740,589, as compared with a total tonnage of 608,945 for the twelve months of the fiscal year of 1911. The sources of the ore smelted were:—

B. C. Copper Co.'s ores Custom ores Converter slags	443,022 284,575 12,992	tons.
Total	740,589	tons.
The coke consumed was 103,154 tons.		
The converter slags included:-		
B. C. Copper Co.'s ores	914	tons.
Custom ores	4,104	
Chay	1,205	44
	6,223	tons.

There were produced 11,259,140 pounds of blister copper, containing:-

25,862-681 ounces of gold. 142,025-06 "" silver. 11,146.811 pounds of fine copper.

No material additions were made to the plant during the year, the machinery as a whole being maintained in its normal condition.

It is planned to use basic instead of acid linings for the converters should this be found practicable without material additions to the plant. Through decreased costs for clay, and elimination of labour in relining converters, it is probable that a decided reduction in the cost of converting can be effected."

The Ladysmith Smelter.—This smelter, owned by the Tyee Copper Company, was not operated during 1912.

Anyox Smelter.—At Anyox on Observatory inlet, Portland canal, the Granby Consolidated Mining, Smelting, and Power Co. is constructing a smelter to treat the ores from their Hidden Creek property. It is expected that this smelter will be ready for operation during 1913.

### COPPER.

The total production of copper in Canada in 1912, estimated on a basis of smelter recovery from ores treated, was 77,832,127 pounds, which, at the average price of copper for the year in New York, 16.341 cents per pound, would be worth \$12,718,548.

Compiled on a similar basis, the copper production of 1911 was estimated at 55,648,011 pounds, showing a large increase in production in 1912. The average New York price for copper in 1911 was 12.376 cents, the increase in price being 3.965 cents, or 32.0 per cent.

In the Province of British Columbia, the copper production is mainly derived from ores carrying a very low content of the metal. In the smelting of these ores the copper losses in the slag are quite considerable, reaching as high, in some cases, as 25 per cent or more of the copper content of the ore. With ores of this character there is, therefore, a wide difference between the copper content of the ore shipped from the mine and the copper metal recovered by the smelters.

The statistics of copper production for the years previous to 1909, as given in Table 2, include, for British Columbia, a record of the copper production in that Province as collected by the provincial Bureau of Mines. These are compiled on the basis' of the total metal content of the ores sent to smelters for which smelter returns were received during the year, and show a relatively higher copper production than the figures published for the Province of Ontario, which are based on copper content of matte produced.

The independent collection of statistics of smelter production by the Mines-Branch—through the courtesy of the smelter operators—has made possible the compilation and publication of statistics of production based on smelter recoveries, as given above; thus providing for a more equitable comparison of the production of the several provinces, and the production of Canada generally with other countries.

The present method of compilation of statistics of copper production by the Provincial Bureau of Mines in British Columbia provides for a deduction of five pounds of copper per ton of ore shipped on account of smelter losses, a method which gives result closely approximating that obtained by this Branch.

# COPPER. TABLE 1.

## Production by Provinces 1910, 1911, and 1912.

	1910.		1911.		1912.	
Provinces.	Lbs.	Value.	Lbs.	Value	Lbs.	Value.
Quebec	877,347 19,259,016 35,270,006 286,000	\$ 111,757 2,453,213 4,492,693 36,431	2,436,190 17,932,263 35,279,558 ‡	\$ 301,503 2,219,297 4,366,198	3,282,210 22,250,601 50,526,656 1,772,660	\$ 526,546 3,635,971 8,256,561 289,670
Total	55,692,369	7,094,094	55,648,011	6,886,998	77,832,127	12,718,045

With the exception of a small output of copper sulphate at Trail, B.C., the copper production of Canada is practically all exported for refining. The exports of copper in ore, matte. regulus, etc., from Canada during the calendar year 1912 are reported by the Customs Department as 78,488,564 pounds, of which 73,176,744 pounds were exported to the United States, and 5.275,820 pounds to Great Britain.

The exports in 1911 were recorded as 55,287,710 pounds. These figures agree fairly closely with the statistics of smelter recovery.

Prices.—The monthly average prices in cents per pound of electrolytic copper in New York are shown for a period of five years in the accompanying table:—

<sup>\*</sup>The decrease is not as large as the figures would indicate because of the calculation of part of the 1909 production on a different basis from previous years. (See explanation in text).

Statistics of the exports of copper, as collected by the Customs Department, are shown in Table 3, and statistics of imports in Tables 4 and 5. The total imports of copper, in so far as weights are given, amounted, during the fiscal year ending March, 1912, to 36,656,429 pounds. During the calendar year 1912 the total imports were valued at \$7,047,356, and included crude and manufactured copper to the extent of 42,832,747 pounds, valued at \$6,741,895, together with other copper manufactures valued at \$305,461, of which the quantity is not stated. In detail, these imports comprise: copper (pigs, ingots, scrap, blocks, etc.), 7,634,539 pounds, valued at \$823,374; copper in bars, rods, coils, etc., 29,520,400 pounds, valued at \$4,665,791; copper in strips, sheets, or plates, 4.462,400 pounds, valued at \$841,207; copper tubing, etc., 770,576 pounds, valued at \$167,257; and copper wire, 444,832 pounds, valued at \$101,748.

#### Nova Scotia.

A certain amount of prospecting was carried on during the year, but no mining of copper ores is reported.

### New Brunswick.

No shipments were made from this Province in 1912.

### Quebec.

In the Province of Quebec there was greatly increased activity during the year, the producing mines of the Eastern Townships shipping an increased tonnage of pyritic ores. The copper production for 1912 was 3,282,210 pounds, valued at \$536,346, representing the estimated recovery from 60,849 tons of ore and concentrates.

Statistics of the copper production of this Province since 1886 are shown in Table 6.

#### Ontario.

The copper production of Ontario comes almost entirely from the nickel-copper orcs of the Sudbury district, and the copper may be regarded as a by product of these ores.

The chief producing companies in 1912 were the Canadian Copper Company, at the Creighton and Crean Hill mines, and the Mond Nickel Company, at the Victoria and Garson mines. During the year the Alexo minenear Kelso Mines, Ontario, shipped a good tounage of nickel-copper ore to the Mond Nickel Company's smelter at Victoria Mines, and a few small shipments

of copper ore were made from Dane, on the Timiskaming and Northern Ontariorailway, to United States smelters.

The total tonnage of nickel-copper ores smelted in 1912 was 725,065 tons. There were produced during the year 41,925 tons of Bessemer matte, containing 11,116 tons of copper and 22,421 tons of nickel, the shipping value of the matte being approximately \$6,303,102. Details of the production of these ores are given more completely and in tabular form in the article on nickel, and also under smelter production.

It is of interest to note that a small amount of copper was paid for by American smelters in a few shipments of Cobalt orcs.

The Ontario Government offers a bounty on copper over 95 per cent pure metal, and on copper-sulphate produced from ore mined and refined in the Province. The text of the Act will be found in the chapter on cobalt, under the heading 'Metal Refining Bounty Act.'

Statistics of the copper production of Ontario since 1886 are given in the table following:-

### British Columbia.

According to returns received from the smelters, the total quantity of copper contained in matte, blister, and copper-sulphate produced in British Columbia smelters during 1912, and including an estimate of smelter recovery for the copper ores exported, was 50,526,656 pounds, after deducting the amount of copper produced from foreign ores. The production in 1911, on a similar basis, was 35,279,558 pounds, and in 1910, 35,270,006 pounds. Returns of smelter production in this Province were not collected by this Department previous to 1908, and a complete record of statistics of production on this basis is not available.

The production of copper in this Province, according to statistics collected and published by the provincial Department of Mines, reached a total of 51,456,537 pounds in 1912, as compared with 36,927,656 pounds in 1911. Statistics of the annual production since 1894, as ascertained by the provincial Department of Mines, are shown in Table 8, and by districts since 1907, in Table 9.

According to direct returns in 1912, the orcs of the Boundary district produced about 65.8 per cent of the total, the Rossland mines about 4.1 per cent, and the Coast district 30.1 per cent.

<sup>\*</sup> Copper content of ores shipped. 
† After deducting five pounds of copper per ton of ore for slag losses.

In the Boundary district practically all the production is from the mines of three of the large smelting companies: the Granby Consolidated Mining, Smelting, and Power Company, Limited; the British Columbia Copper Company, Limited; and the New Dominion Copper Company, Limited. The last named is controlled by the British Columbia Copper Company. The two companies first named operated their own smelters, converting their matte into blister copper. The Consolidated Mining and Smelting Company of Canada, Limited, did not ship from any of their properties in this district during the year. The low grade cres of this district are self-fluxing and remarkably uniform in character, ranging from 1 to 2 per cent in copper, and from \$1 to \$2 in gold and silver.

The approximate ore shipments during 1912, and the total shipments of the chief producers from mines in this district to the end of 1912, were as follows:—

	1912.	Total.
Granby Consolidated Mining, Smelting, and Power Co., Ltd. British Columbia Copper Co., Ltd. New Dominion Copper Co., Ltd Consolidated Mining and Smelting Co., of Canada, Ltd.	400,990 262,000	Tons, 8,666,570 3,152,475 1,093,697 613,000

The chief producing mines of the district were the Granby mines; the Mother Lode, Emma, Wellington, and Jack Pot Fraction, of the British Columbia Copper Company; and the Rawhide and Athelstan, of the New Dominion Copper Company.

Next in importance in point of production came the Coast district, with heavy shipments from the Britannia mines on Howe sound and the Marble Bay mines on Texada island. Several smaller properties also shipped.

The Rossland district is also an important source of the copper production of the Province, though its ores are chiefly valuable for their gold content.

Interest in development work was directed to several points during the year: the acquirement of the Eureka and Queen Victoria groups in the Nelson district by the British Columbia Copper Company, and of the Silver King by the Consolidated Mining and Smelting Company; the developments being carried on in the Similkameen by the Granby and British Columbia companies, and the development of the Hidden Creek Copper mines and erection of a smelter at Anyox by the Granby Consolidated Mining, Smelting, and Power Company. The copper properties at Rocher de Boule mountain, near Hazelton, in northern British Columbia, indicate a probable source of further supplies of the metal with the development of transportation facilities.

### Yuken.

In the Euleon district heavy uniquents of copper ore were made during 1912 from Whitehorse. The Whitehorse copper belt was discovered in 1897, and the first claim was staked the following year. Shipments were made at different times from the various properties. The cost of transportation retarded development, so that the lowering of freight rates in the earlier part of 1912 by the White Pass and Yukon railway has been an important factor in this year's production. The chief shipper is the Pueblo mine, operated by the Atlas Mining Company, of Whitehorse.

### GOLD.

Refined Metal.—The Dominion Assay Office in Vancouver, operated in connexion with this Department, receives, assays, and purchases crude gold bullion, amalgam, nuggets, and dust, the resultant bullion being resold. The total quantity of bullion thus received during the twelve months ending December 21, 1912, was 57,951-98 ounces, being the weight after melting, valued at \$74,077.14, after deducting office charges.

The assay charge was removed January, 1913, leaving the melting charge, equivalent to one-eighth of one per cent of the value of the bullion, thus placing the charges on a par with those of American offices.

A refinery has been erected at the Royal Mint, at Ottawa, and shipments of gold have been received from different provinces.

There is but one other refinery in Canada producing fine gold, that at Trail, established in 1904, operated by the Consolidated Mining and Smelting Company of Canada, Limited, the annual output of which is given below. The gold is recovered from the ores treated in the lead furnaces.

Mine Production.—The production of gold in Canada—made up of gold derived from alluvial workings, gold obtained from the crushing of free-milling quartz ores, and the gold obtained from ores and concentrates sent to copper and lead smelters, etc.—reached a total, in 1912, of 611,885 fine ounces, valued \$12,648,794, as compared with 473,159 fine ounces, valued at \$9,781,077, in 1911, an increase of 138,726 ounces in quantity and \$2,867,717 in value, or 29-32 per cent.

The production, by provinces, in 1910, 1911, and 1912 is shown in Table 1, as follows.

# GOLD.—TABLE 1. Production by Provinces, 1910, 1911, and 1912.

	5,403,318	4,930,145	5,205,485

The exact value of fine gold is  $^{600}_{387}$  dollars per ounce equivalent to \$20,671834. (United States Standard.)

In most cases, statistics of gold production are stated as crude bullion with value thereof. The fine ounces given in the tables in this report are calculated from the values by multiplying these by \$\frac{8000}{8000}\$ or \$0.048375.

Of the total production in 1912, about \$6,106,677, or 48.3 per cent, is to be attributed to alluvial workings, \$2,270,331, or 17.9 per cent, was derived from stamp milling, and \$4,271,786, or 33.8 per cent, obtained from ores sent to the smelters.

There was a general increase in all the provinces except Nova Scotia, the increase from Ontario being most noticeable, due to the mines of Porcupine reaching a producing stage.

Statistics of the annual gold production of Canada are shown in Table 2:-

GOLD.—TABLE 2.

†Calculated from the value: one dollar=0.048375.

Gold was discovered in various provinces of Canada about 1858, and it will be observed that the production gradually increased to a maximum in 1863, and then more or less regularly decreased to a minimum in 1892, then, increasing with further discoveries, it received the impetus of the discovery of the Yukon in 1896 and rose to over twenty-seven million dollars in 1900, and again fell with the exhaustion of the smaller placer holdings; 1909 saw another low point, but the increasing production from Porcupine district, Ontario, and from other provinces also, premises well for the future.

#### Nova Scotia.

The gold production of Nova Scotia, which is derived almost entirely from quartz ores, was 4,385 fine ounces, valued at \$90,638. The Deputy Inspector of Mines for the Province, states in his report for the fiscal year 1912: 'The gold production is the lowest since gold mining was established as an industry in the Province and, it is almost needless to say, is disappointing. It is, however, but justice to the industry to say that it does not fairly represent the operations carried on, as at several of the districts the principal efforts of the operators

were directed to mine development and prospecting rather than to the immediate recovery of gold.'

The principal operators in 1912 were:-

Byron Bower, Carleton. M. J. O'Brien and tributors, Caribou. Stillwater Mining Co., Moose River. Switzer Mining Co., Fifteenmile brook. Uniac Mines and Power Co., Gold River. W. A. Brennan and tributors, Oldham. M. J. O'Brien, et al., Renfrew. New England Mining Co., Stormont. Sydney Gold Mining Co., Stormont. Seal Harbour Mining Co., Stormont. Boston and Goldenville Mining Co., Shiers point. Goldenville Mining Co., Sherbrooke. Dominion Leasing Co., Tangier. Gladwin Gold Mining Co., Beaver Dam. S. R. Giffin & Sons, Stormont. Petpeswick Mining Co., Lake Catcha.

Statistics of the annual production since 1862 are shown in Table 3, and the production of gold by districts during the twelve months ending September 30, 1912, as collected and published by the provincial Mines Department, in Table 4, while the total production from 1862 to 1911, by districts, according to the same authority, is shown in Table 5.

### Quebec.

The gold of this Province is derived from two sources, the pyritic ores of the Eastern Townships, and the alluvial deposits in Beauce. The pyritic ores are treated primarily for their sulphur and copper contents but carry also small values in gold and silver. The mines at Eustis and Weedon were very active during the year.

### Ontario.

The feature of the year from the standpoint of gold production was the commencement of steady milling operations by the mines of Porcupine district, resulting in an increase of nearly one and three-quarter millions of dollars in the provincial production. There was also an increased production from the older gold districts of the Province.

Among the producing mines of the Province in 1912 were:-

Cordova Mines, Ltd., Cordova mine, Peterborough county.

The Dome Mines Co., Ltd., Dome mine, Tisdale township, Nipissing district.

The Hollinger Gold Mines, Ltd., Hollinger mine, Tisdale township, Nipissing district.

The McIntyre Porcupine Mines, Ltd., McIntyre mine, Tisdale township, Nipissing district.

Vipond Porcupine Mines Co., Ltd., Vipond mine, Tisdale township, Nipissing district.

Detroit New Ontario Mines, Ltd., Detroit mine, Munro township.

Clement A. Foster, Tough-Oakes mine, Kirkland lake.

Stargeon Lake Development Co., St. Anthony mine, Sturgeon lake, Thunder hay.

Edizabeth Gold Mines, Ltd., Elizabeth mine, Steeprock lake, Rainy River district.

Great Golconda Mines, Ltd., Golconda (Laurentian) mine, Gold Rock, Rainy River district.

 $49509 - 5\frac{1}{2}$ 

Olympia Gold Mining Co., Olympia mine, Shoal lake.

Redeemer Mining Co., Redeemer mine, Dryden.

Statistics of the production of gold in Ontario since 1887 are shown in Table 7 following:—

### Manitoba.

While there was no production in 1912 from this Province, considerable interest has developed in recent discoveries in the eastern part, and several companies have commenced work, and some are expected to reach the producing stage during 1913.

### Alberta.

There has been, as in past years, a small production from the placer deposits of the Saskatchewan river.

Statistics of the production of gold from the Saskatchewan river since 1887 are shown in Table 8.

# GOLD.—TABLE 8. Alberta:—Annual Production.

<sup>\*</sup> Calculated from the value: one dollar = 0.048375 ozs.

### British Columbia.

The gold production of British Columbia in 1912, as reported to the Department, amounted to \$5,205,485, comprising: placer gold, \$555,500; bullion from milling ores, \$391,572; and smelter recoveries, \$4,258,413. The statistics for lode gold represent, as closely as can be ascertained, the actual gold recovery based on smelter recoveries and bullion shipments.

In alluvial gold recovery a general increase was shown. Of the 1912 production, about 11 per cent was from alluvial workings, 7 per cent from free milling ores, and 82 per cent from ores sent to the smelters.

Statistics of the production by districts, in 1911, as published by the provincial Department of Mines, are shown in Table 9, while the total annual production since 1858 is given in Table 10.

Calculated from the value: one dollar = 0.048375 oz.

The placer and hydraulic mining situation was favourable, and there was an increase in production in spite of a temporary shortage of water.

Among the camps of the Province, Rossland ranks first as a producer of gold from lode mines.

The chief companies now operating are:-

The Consolidated Mining and Smelting Co. of Canada, Ltd., owning the Centre Star, War Eagle, and Le Roi groups, shipped over 207,500 tons from these properties during the year.

The Le Roi No. Two Mining Co., Ltd, which is working the Le Roi Two, or Josie mine, shipped over 20,500 tons.

Some of the smaller properties of the camp also operated during the year.

The Boundary district comes next in gold production. The output is largely due to the large tonnage of copper ores mined in this district. These ores will average only 0.04 to 0.05 ounces of gold per ton. In addition, the Osoyoos Mining Division, which is included in this district, contains the Nickel Plate mine at Hedley, the premier gold mine of the Province. In the report for 1912 of the Hedley Gold Mining Co., the following details are given: tons milled, 70,455; assay value, \$11.19; gold recovered, \$748,133.14, or 95 per cent; reserve

tonnage of broken ore, 10,000; development during the year, 1,340 feet; diamond drilling, 6,380 feet.

Several mills were in operation in the Nelson and Trail Creek districts.

The copper ores of the Coast district in many cases do not carry gold values, so that in spite of the increase in shipments there was a falling off in the gold recovery from these ores.

### Yukon.

The production of the Yukon in 1912 was \$5,540,296, as compared with \$4,634,574 in 1911, an increase of \$914,722, or 19.7 per cent. In this is included the production from the lode mines.

The statistics of production of gold in the Yukon district during the years between 1898 and 1906, as given in Table 11, are based primarily on the receipts of gold at the United States mints and receiving offices, and credited to the Canadian Yukon. Although a royalty was exacted on the gold output, it seems certain that considerable amounts of gold were produced which escaped royalty payment, particularly during the years of high production.

Since 1906, however, the gold production of the Yukon, as ascertained by the Interior Department, and on which royalty of 2½ per cent is imposed, has agreed fairly closely with the quantities reported at the United States receiving offices as having been derived from the Canadian Yukon. For the purpose of collecting the royalty, a fixed value of \$15 per ounce is placed on the crude gold. The actual value of the gold will average somewhat higher than this, however. The average value of the deposits for a number of years, as shown by the experience of the United States assay office, has been about \$16.50 per ounce. At the Canadian assay office at Vancouver, B.C., there were deposited during the twelve months ending December 31, 1912, 2,211.88 ounces from the Yukon, valued, after all charges had been deducted, at \$36,480.66, showing an average value of about \$16.41 per ounce.

The production of crude placer gold in the Yukon during the past six years, as ascertained by the Department of the Interior, and upon which a regulty of the per coal has been collected, is shown in the accompanying Table.

In 1912 the placer production is estimated at \$5,539,808 in gold, representing 267,988 fine ounces of metal, and 60,302 fine ounces of silver, valued at \$36,685, being at the average price of fine silver for the year, making a total valuation of the Yukon placer output of \$5,576,493. In 1911 the placer production was estimated at \$4,580,000, representing 221,557 fine ounces of gold and 50,300 fine ounces of silver, valued at \$26,812, making a total valuation of \$4,606,812.

Statistics of the annual production of gold in the district since 1885 are shown in Table 11.

				7,087,117	146,503,732

<sup>‡</sup> Calculated from the value : one dollar=0.048375 oz. \* Including a small production from lode mines.

Since 1898 a royalty to the extent of \$3,990,513 has been collected on the gold production of this district. The yearly amounts collected, as well as the annual production of gold, as ascertained by the Interior Department, are shown in the accompanying table. The difference between these figures and those shown in Table 11, which are based on the mine receipts of Yukon gold, has already been mentioned, and is probably due to two main factors: (1) the fixing of the value of the gold for royalty purposes at \$15 per ounce, a figure from \$1 to \$2 less than the actual value of the gold, and (2) the probability that in the earlier years of royalty collection, considerable quantities of gold dust left the camps unrecorded and escaped royalty payment.

<sup>#</sup>From the Report of the Yukon and Mining Lands Branch of the Department of the Interior.

During the calendar year 1912 there were imported: gold bullion, valued at \$1,360,735; gold coins, \$7,496,492; and manufactures of gold and silver, valued at \$1,157,622.

The exports of gold, in dust, nuggets, ore, etc., in the same period were valued at \$10,014,654.

#### IRON AND STEEL.

#### INTRODUCTORY.

A review of the statistics of iron and steel production in 1912 embraces a received of conditions similar to those which have affected this industry for a numher of years past. Notwithstanding the rapid increase in production by Canadian manufacturers of iron and steel goods, the Canadian consumption continues to increase at an even more rapid rate than the domestic production. At the present time less than 30 per cent of the quantity of iron and steel consumed in Canada is supplied from Canadian plants; the Canadian producers are, therefore, comrelled to meet conditions in so far as market and prices are concerned which result from the condition of the industry in those countries from which our chief supplies are obtained, viz., the United States and Great Britain. Throughout the greater part of 1911 and a portion of 1912, low prices were quoted on iron and steel imported from the United States, and Canadian producers claimed that it was impossible to carry on business except at a very low margin of profit. Price conditions, however, have improved considerably during 1912. Despite the adverse conditions of trade the production of pig iron and steel has continued to increase, and manufacturers are almost without exception continuing to extend their facilities to supply a larger market in the future.

The production of iron ore from Canadian mines must be considered apart from the blast furnaces and steel industries. Canadian iron ore resources have not been developed sufficiently to supply home demands-in fact since 1896 Canadian blast furnaces and steel plants have become more and more dependent upon supplies of imported ores. The total shipments of iron ores in 1912 from mines in Canada were 215.883 tons, whereas blast furnaces consumed 2,090,753 tons, and steel furnaces 43,006 tons. Although the shipments from iron ore mines were slightly higher than in 1911, they are, with the exception of the previous year, the lowest that have been recorded in thirteen years, and amount to less than 10 per cent of the years' requirements of blast and steel furnaces. Considerable progress, however, is being made in the development of large low grade iron ore bodies, and if the successful concentration of these is achieved, a growing production may be anticipated in the immediate future. The production of pig iron in 1912 was 1.014.587 short tons, and steel ingots and castings, 957,681 short tons. While the rate of production of iron ore has shown practically no increase during the past thirteen years, the production of pig iron is now over ten times that of 1900.

A considerable portion of the production of iron ore is exported, and of the total amount of iron ore used in Canadian blast furnaces in 1912, only about 3 per cent is of domestic origin. Of the total amount of coke used 52 per cent was

either imported or made from imported coal, and 27 per cent of the limestone flux used was from sources outside of Canada. In each instance the proportion of imported raw material used was either equal to or higher than the proportion used in 1911. During 1912 the total tonnage of imported ores used in Canadian furnaces was 2,019,165 tons, being derived chiefly from Newfoundland and from the south shore of Lake Superior.

The assistance granted by the Federal Government to the iron and steel industries in the form of bounties ceased in the year 1910, with the exception of the bounty on steel rods which was continued until June 30, 1911, and the bounty on pig iron and steel made in electric furnaces which was available to December 31, 1912. No bounties on iron and steel were claimed during the calendar year 1912.

The accompanying table gives a summary of the chief statistics of iron ores, pig iron, and steel, while more detailed records will be found in subsequent tables.

Summary of Iron and Steel Statistics, 1909-12.

Pig iron imported.     148,338     243,859     208,487     272,5       Pig iron consumption (calculated).     900,437     1,034,893     1,120,152     1,280,1°       Pig iron used in steel furnaces. #### TRON ORE.

The total shipments of iron ore in Canada in 1912 were 215,883 tons, valued at \$523,315 at the shipping point, as compared with 210,344 tons, valued ut \$522,319, in 1911, and 259,418 tons valued at \$574,362, in 1910. Of the 1912 production, 86,971 tons were classed as hematite and 128,912 tons as magnetite. The production in 1911 included 137,399 tons of hematite and 72,945 tons of magnetite. Although there was but little active mining operations in the Maritime Provinces during 1912, considerable shipments of iron ore were made from stock in hand.

The Torbrook mines in Annapolis county, N.S., owned by the Canada Iron Corporation, were not operated during the year, but shipments of 30,857 net tons were made from stock piles. Preparations were being made to re-open the mine. Some prospecting is reported to have been carried on near Glencoe, Inverness county, on a promising body of iron ore.

In New Brunswick, the Canada Iron Corporation operated its mines near Austin Brook, Bathurst, the work being chiefly of the nature of development. Shipments, however were made from stock of 71,520 tons as against 31,120 tons shipped in 1911.

The total shipments from both these Provinces in 1912 were made either to Europe or to the United States.

In the Province of Quebec some titaniferous ore was mined at St. Urbain, but was held for shipment in 1913. The Manitou Mining Co. opened up a mine on lots 37 and 38, range V, of the township of Beresford, Terrebonne county, and 1.185 tons of titaniferous ore were shipped from Ivry station to the United States.

The total shipments from Ontario mines in 1912 were 112,321 tons, as compared with 175,586 tons in 1911. The largest producers were the Helen mine at Michipicoten, and the Moose Mountain mine at Sellwood, north of Sudbury. Several other iron ore properties were being developed. The Canada Iron Mines, Ltd., has opened up the Bessemer mine and Childs mine in Hastings county, and has built a concentrating plant in Trenton, Ontario. A considerable tonnage of ore was shipped to the concentrator during the year, but a trial shipment only of concentrates was made. The Tivani Electric Steel Co., Ltd., Belleville, was engaged in developing the Orton mine, the ore from which it proposes to use in its new electric steel furnace. The Belmont iron mine was being developed by the Buffalo Union Furnace Company. The ore will be used in the new furnace being constructed by this Company at Port Colborne, Ontario. The mines at Atikokan were not worked for output as the furnaces at Port Arthur were closed down throughout the year, but operations were carried on chiefly for development. The Helen mine at Michipicoten was operated throughout the year and a considerable tomage of ore stocked in addition to the shipments made to the furnaces at Sault Siz. Marie. Shipments were made from Moose Mountain mine to various furnaces in Ontario and the United States, and a beginning has been made in the concentration of these ores.

No production is reported from the Province of British Columbia.

The production by provinces during the past three years was as follows:—.

IRON.—TABLE 1.

### Production of Iron Ore by Provinces, 1910-11-12.

Provinces.	191	0.	191	1.	1912.		
	Tons.	Value.	Tons.	Value.	Tons.	Value	
		\$		\$		\$	
New Brunswick	5,336	11,910	31,120	69,464	71,520	127,716	
Nova Scotia	18, 134	40,478	22	50	30,857	168,877	
Quebec	4,503	8,252	3,616	6,479	1,185	4,232	
Ontario	231,445	513,722	175,586	446,326	112,321	222,490	
	259,418	574,362	210,344	522,319	215,883	523,315	

The production during 1911 and 1912 classed as magnetite (including titaniferous iron ores and some ores with an admixture of hematite) and hematite, was as follows:—

IRON.—TABLE 2.

Classified Production of Iron Ore, 1911-12.

Character of ore.		1911.		1912.			
	Short tons.	Value.	Per ton.	Short tons.	Value.	Per ton.	
		\$	\$ cts.		s	\$ cts.	
Magnetite	72,945	154,295	2 12	128,912	216,368	1.68	
Hematite	137,399	368,024	2 68	\$6,971	306,947	3 53	
	210,344	522,319	2 48	215,883	523,315	2 42	

A record of the production by provinces in past years is shown in Tables 3 and 4. There was a considerable production in Ontario previous to 1886, which is not included.

1830.	51, 193		48,129

Following is a list of the principal producers of iron ore in Canada:-

Canada Iron Corporation, Limited, Mark Fisher Bldg., Montreal, Que. \*E. H. Duval, Lévis, Que., (Guay P.O.).
\*H. C. Bosse, 92 St. Peter St., Quebec, Que.
\*Joseph Bouchard, Baie St. Paul, Que.
Manitou Iron Mining Co., Montreal, Que.

Manitou Iron Mining Co., Montreal, Que.

\*Loughborough Mining Co., Schenectady, N.Y.

\*The Canadian Iron Ore Co., 1231 St. Valier St., Quebec, Que.

The Algoma Steel Corporation, Sault Ste. Marie, Ont.

Canada Iron Mines, Ltd., Toronto, Ont.

\*Atikokan Iron Company, I.td., Port Arthur, Ont.

Moose Mountain, Limited, Seltwood, Ont.

\*Dominion Bessemer Ore Co., Ltd., 472 Bullitt Bldg., Philadelphia, 1's.

\*Tivani Electric Steel Co., Belleville, Ont.

\*Buffalo Union Furnace Co., Buffalo, N.Y.

\*No shipment reported during 1912.

#### EXPORTS AND IMPORTS OF IRON ORE.

Previous to April 1, 1912, a separate record of the imports of iron ore into 'Canada was not published by the Department of Customs. During the nine months ending December 31, 1912, the imports of iron ore were recorded by that department as 2,047,509 tons, valued at \$3,932,074. Since practically all of the imported ores are used in Canadian blast furnaces, the statistics of consumption of imported ores in these furnaces would furnish a fairly close estimate of the quantities imported.

There were used in Canadian iron furnaces during 1912, 2,019,165 tons of imported iron ores, as compared with 1,628,368 tons in 1911. Increasing amounts of iron ores have been imported since 1896, the total quantity imported during the 17 years being 12,545,654 tons.

According to the United States reports of Commerce and Navigation, there were exported to Canada during the twelve months ending June 30, 1912, 931,647 tons (2,000 lb.) of iron ore valued at \$2,806,238, and during the previous year 826,071 tons (2,000 lb.) valued at \$2,496,246.

The shipments of iron ore from Newfoundland to Sydney, during the calendar year 1912, were 956,459 tons, as compared with 737,261 tons in 1911, and 808,762 tons in 1910.

The exports of iron ore from Canada during 1912 were 118,129 tons valued at \$382,005, as compared with exports of 37,686 tons valued at \$133,411 in 1911.

The ores exported in 1912 were chiefly those from Torbrook, N.S., Bathurst, N.B., Moose Mountain, Ont., and a small tonnage of titaniferous iron ores from Quebec.

<sup>\*</sup>Compiled from the 'Foreign Commerce and Navigation of the United States.'

#### PIG IRON AND STEEL.

An increase of 10.5 per cent is shown in the production of pig iron in Canada in 1912 over the production of 1911, as compared with an increase of 14.6 per cent for 1911 over that of 1910.

At the close of the year Canada had nineteen completed furnaces, and two under construction, grouped in ten separate completed plants, operated by eight companies or corporations, and one new plant under construction.

The total production of pig iron in 1912 was 1,014,587 short tons (905,881 long tons), valued at approximately \$14,550,999, as compared with 917,535 short tons (819,228 long tons), valued at \$12,307,125, in 1911, and 800,797 short tons (714,998 long tons) valued at \$11,245,622, in 1910. The Londonderry furnace has not been in operation during four years past, and the furnaces of the Canada Iron Corporation, in Quebec, and that of the Atikokan Iron Company at Port Arthur, were idle throughout 1912. The figures of production given above do not include the output of ferro-products from electric furnaces which are situated at Welland and Sault Ste. Marie, Ontario, and Buckingham, Quebec. Ferrosilicon was made both at Welland and Sault Ste. Marie, ferro-titanium at Welland, and ferro-phosphorus at Buckingham.

Of the total output of pig iron in 1912, 21,701 tons, valued at \$435,960, or \$20.10 per short ton, were made with charcoal as fuel, and 992,886 tons, valued at \$14,110,030, or \$14.21 per ton, with coke. The amount of charcoal iron made in 1911 was 20,759 tons, and in 1910, 17,164 tons; while the quantity made with coke in 1911 was 896,776 tons, and in 1910, 783,633 tons.

The classification of the coke iron production in 1912, according to the purpose for which it was intended, was as follows: Bessemer, 256,191 tons; basic, 544,534 tons; foundry (including miscellaneous) 192,161 tons.

The classification of the production in 1911: Bessemer, 208,626 tons; basic 464,221 tons; foundry, 192,161 tons.

The total production of pig iron in 1911 and 1912 is shown by provinces in the following table, the average value per ton being also indicated. In the case of Nova Scotia a large proportion of the pig iron is directly converted into steel and as a very small portion of the metal is sold as pig iron, it is somewhat difficult to place a satisfactory valuation upon the output. In 1910 and 1911 a nominal value of \$12 per short ton was used for statistical purposes. This, in 1912, was increased to \$15 per ton, which was thought possibly to be a fairer valuation on the output. It must not be inferred, therefore, that the difference represents an increase in the value of pig iron at Sydney.

There was no production of pig iron in the Province of Quebec during 1912. In past years this Province has had a continuous though small production of charcoal iron, which for many years commanded a high price.

IRON.—TABLE 8.

Production of Pig Iron by Provinces, 1911-12.

Total	917,535	12,307,125	13 41	1,014,587	14,550,999	14 34	+10.6

A record of the production by provinces since 1887 is shown in Table 9.

It will be observed that while the production of Nova Scotia has increased by about 30 per cent since 1906, the Ontario production has increased by over 60 per cent during that period. The proportions of the whole contributed by the several provinces were, in 1912: Nova Scotia, 41.9 per cent; and Ontario, 58.1 per cent. In 1911 the proportions were: Nova Scotia, 42.5 per cent; Ontario, 57.4 per cent; and Quebec less than one-tenth of one per cent.

Prices.—The average price of domestic pig iron at Toronto, according to trade quotations, ranged from \$19 to \$19.50 per gross ton during eleven months of the year. In December quotations were advanced to \$22. Another authority furnishes quotations at from \$18 to \$18.50 in January, increasing in May to from \$19.75 to \$20; increasing again in September to from \$20.50 to \$21, in October, \$21.50 to \$22, and December, \$22 to \$23. In Montreal the price of Nova Scotia iron was quoted in January at \$19.75, falling to \$18.50 in April, and increasing again in August and September to \$19 and \$20, and in December, to \$21.50.

The price of Summerlee No. 2 pig iron was quoted in Montreal at \$20 during the first nine months of the year, and at \$24 during the last three months.

Bessemer pig iron at Pittsburgh was quoted at from \$15 to \$15.20 during the first eight months of the year, advancing steadily during the next four months to an average of \$18.15 per gross ton, in December. The price of the same grade of iron in Pittsburgh in 1911 varied between \$15 and \$16 per ton.

A record of the average monthly prices per gross ton of pig iron at Montreal and Toronto during 1911 and 1912, and of Bessemer pig iron and grey forge iron at Pittsburgh, for a period of ten years, is shown in the accompanying tables.

## Average Monthly Prices of Pig Iron in Canada During 1911-12.

<sup>&</sup>quot;Including coke made from imported coal.

Previous to 1896 pig iron was made entirely from Canadian ores. Since that date, however, increasing quantities of imported ore have been used, as well as imported fuels and fluxes, and in 1912 about 97 per cent of the ore charged, 52 per cent of the coke, and 27 per cent of the limestone, were imported. This condition is attributed largely to questions of cost and transportation affecting the ore supplies available for each furnace. The Newfoundland ores can be cheaply and conveniently laid down at Sydney, N.S.—in fact the iron and steel industry here has been built up on the basis of these ores, and by the local coal

supply. In Ontario also, large quantities of imported ores are used. In 1912 the imported ores used in Ontario amounted to 1,142,593 tons, and the Canadian ores, 71,588 tons, the imported ores being derived from Michigan and Minnesota deposits. With the exception of a small quantity of charcoal used at one furnace, the fuel (coke) used in Ontario was also altogether imported, as well as a portion of the limestone flux.

<sup>\*</sup>Includes for the first ten years small quantity of coal.

#### IRON BLAST FURNACES IN CANADA IN 1912.

Of nineteen completed furnaces, fourteen were in blast in 1912 for varying periods of time. The operating companies with numbers and capacities of furnaces, were as follows:—

Dominion Iron and Steel Company, Sydney, C.B.—Five completed furnaces of 280 tons capacity, each, per day; four operated throughout 1912, one for 108 days; one furnace under construction.

Nova Scotia Steel & Coal Co., Ltd., New Glasgow, N.S.—One furnace at Sydney Mines, C.B., of 200 tons capacity; operated 322 days.

Londonderry Iron & Mining Co., Ltd., Londonderry, N.S.—One furnace of 100 tons capacity, idle throughout the year.

Canada Iron Corporation, Ltd., Montreal, Que.—Two small furnaces of seven and eight tons capacity, at Drummondville, Que., idle throughout the year; one furnace of 25 tons daily capacity, at Radnor Forges, Que., idle throughout the year; two furnaces of 125 tons and 250 tons at Midland, Ont., operated for 92 and 184 days respectively.

Standard Iron Company of Canada, Ltd., Deseronto, Ont.—One furnace with a daily capacity of 65 tons, operated for 11 months during the year 1912.

The Steel Company of Canada, Ltd., Hamilton, Ont.—Two furnaces: one of 200 tons capacity operated for 314 days in 1912; a second furnace of 300 tons capacity, operated 325 days in 1912.

Algoma Steel Company, Ltd., Sault Ste. Marie, Ont.—Three furnaces at Steelton, near Sault Ste. Marie: two of 250 tons capacity each, operated for 322 and 300 days respectively; and one of 450 tons capacity, operated throughout the year.

The Atikokan Iron Company, Ltd., Port Arthur, Ont.—One furnace of 100 tons capacity; idle throughout 1912.

The total daily capacity of the nineteen furnaces is about 3730 tons. On December 31, 1912, fourteen were in blast and nine idle.

The average number of men employed in blast furnace operations in 1912 were reported as 1,358, and the total wages paid, \$993,941.

In addition to the new furnace being constructed by the Dominion Iron and Steel Company at Sydney, the Buffalo Union Furnace Company has begun the construction of a modern blast furnace at Port Colborne, Ont., for the manufacture of foundry, malleable, and Bessemer pig iron. This furnace will have a capacity of 300 to 315 tons per day, and will use Lake Superior ores at the outset, although it is proposed, at a later date, to also use Canadian concentrates.

The United States Steel Corporation also proposes to establish a plant in Canada, and a site has been selected at Ojibway, Ontario, opposite the city of Detroit, Michigan. This Company's plans are outlined in the last published annual report of the corporation as follows:—

'In order to meet in a more satisfactory manner the growing demands of the Canadian trade for the products of the subsidiary companies, it has been decided to establish a manufacturing plant in Caanda at the site which the corporation secured some years ago at Ojibway, Ontario, opposite the city of Detroit, Michigan. The site consists of about 1,500 acres, with a frontage of about a mile and a half on the Detroit river. The plans for, and the scope of, the construction of the plant have not yet been fully developed, but will probably include blast furnaces, open hearth steel works, rail mill, wire mill, structural and bar mills, and perhaps some other mills. It is expected the cost of the plant will in part be financed by an issue of bonds.'

## EXPORTS AND IMPORTS OF PIG IRON.

The exports of pig iron from Canada consist chiefly of high grade charcoal pig iron and of ferro products, including ferro-silicon and derro-phosphorus.

The total exports during 1912 were 6,976 tons, valued at \$310,702, or an average value per ton of \$44.54, as compared with exports of 5,870 tons, valued at \$271,968, or an average of \$40.33 per ton, in 1911.

The exports during the past four years have not exceeded 10,000 tons in any one year, and during the previous four years, did not exceed 1,000 tons in one year.

Considerable quantities of pig iron are annually imported into Canada. During the calendar year 1912, the imports totalled 272,565 tons, valued at \$3,511,599, and included 210,756 tons, valued at \$2,599,117, or an average of \$12.33 per ton from the United States; and 61,809 tons, valued at \$912,482, or an average of \$14.76 per ton, from Great Britain. The total imports in 1911 were 208,487 tons, valued at \$2,610,989, or an average of \$12.52 per ton; and in 1910, 243,859 tons, valued at \$3,364,847. The 1912 imports included 115 tons of charcoal pig iron, valued at \$1,370 or \$11.91 per ton. There was no charcoal pig iron imported in 1911.

The annual imports of these two classes of pig iron since 1880 are shown in the accompanying Table No. 12, statistics being given for the fiscal year.

#### FERRO-PRODUCTS.

Ferro-silicon, ferro-phosphorus, and ferro-titanium, were produced in Canada in electric smelting plants, in 1912, the latter two in small quantities only. Ferro-silicon is made at Sault Ste. Marie and at Welland, Ont., ferro-phosphorus at Buckingham, Que., and ferro-titanium at Welland, Ont. The Electric Reduction Company at Buckingham, Que., in former years also manufactured other ferro products, including ferro-silicon and ferro-chrome.

The Electro Metals, Limited, at Welland, Ont., was chiefly engaged in the production of ferro-silicon. This firm has also made ferro-titanium in small quantities, as well as carried out experimental work in the production of pig iron in electric furnaces.

The Algoma Steel Corporation operated their electric furnace at Sault Ste.

Marie for a very short period only during the year.

The total production in electric furnace plants during 1912 was 7,834 short tons of ferro products, valued at \$465,225. In 1911 the production was 7,507 short tons, valued at \$376,404.

The imports of ferro-silicon, ferro-manganese, etc., during the calendar year 1912, were 19,810 tons valued at \$469,884, or an average of \$23.72 per ton. The imports for the calendar year 1911 were 17,226 tons, valued at \$429,465, or an average of \$24.93 per ton; and in 1910, 18,900 tons, valued at \$464,741, or an average of \$24.59 per ton. The imports since 1887 are shown in Table 15, the figures of the table being for fiscal years.

<sup>\*</sup>These amounts include: ferro-manganese, ferro-silicon, spiegel, steel bloom ends and cropends of steel rails, for the manufacture of iron and steel.

†Ferro-silicon, spiegeleisen, and ferro-manganese.

#### STEEL.

The production of steel ingots and castings in 1912 was 957,681 tons, as compared with 882,396 tons in 1911, and 822,284 tons in 1910. In 1912 the production of open-hearth ingots was reported as 692,236 tons; Bessemer ingots, 231,044 tons; direct open-hearth castings, 31,845 tons; and other steels, 2,556 tons. The total increase in production over 1911 was 75,285 tons, or a little over 8.5 per cent.

The production during the past five years is shown in Table 16, following:-

IRON.—TABLE 16.

Production of Steel, 1908-12.

	1908.	1909.	1910.	1911.	1912.
	Tons.	Tons.	Tons.	Tons.	Tons.
Ingots—Open-hearth (basic)	443,442 135,557 9,051 713	535,988 203,715 14,013 1,003	580,932 222,668 18,085 599	651,676 209,817 20,163 740	692,236 231,044 31,845 2,556
Total	588,763	754,719	822,284	882,396	957,681

Statistics showing the principal materials used in steel furnaces were obtained for the first time in the year 1910. The total quantity of pig iron used in steel furnaces during 1912 was 735,559 tons, of which 706,895 tons were produced by firms reporting, and 28,664 tons purchased. The quantity of ferro-alloys used was 24,237 tons purchased. Scrap, etc., was used to the extent of 336,265 tons, being 223,404 tons produced by the firms reporting, and 112,861 tons purchased. Ores used included 985 tons of manganese ore and 43,006 tons of iron ore, while 148,045 tons of limestone or dolomite flux were used, and 9,709 tons of fluorspar. In Ontario a little over 423 million cubic feet of natural gas were used, while in Nova Scotia coke oven gas was used at Sydney, of which a record of quantity was not obtained.

In 1911 the total quantity of pig iron used in steel furnaces was 700,679 tons, of which 640,636 tons were produced by firms reporting, and 60,043 tons purchased. The quantity of ferro-alloys used was 21,359 tons purchased. Scrap, etc., was used to the extent of 278,797 tons, being 198,482 tons produced by the firms reporting, and 80,315 tons purchased. Ores used included 829 tons of manganese ore and 42,892 tons of iron ore, while 130,270 tons of limestone or dolomite flux were used and 8,067 tons of fluorspar. In Ontario a little over 662 million cubic feet of natural gas were used.

Statistics of the production of steel ingots and castings since 1894 are given in the following table, the figures for 1894 to 1906, inclusive, having been collected and published by the American Iron and Steel Association; those for the years 1907 to 1912 have been collected by this department.

IRON.—TABLE 17.

Annual Production of Steel Ingots and Castings, 1894-1912.

Calendar Year.	Short tons.	Calendar Year.	Short tons.	Calendar Year.	Short tons.

Following is a list of firms making steel in Canada:-

Londonderry Iron and Mining Co., Ltd., Montreal, Que.

Dominion Iron and Steel Company, Sydney, N.S.

Nova Scotia Steel and Coal Company, New Glasgow, N.S.

Canadian Steel Foundries, Ltd., Montreal Que.

Beauchemin et Fils, Sorel, Que.

The Algoma Steel Company, Sault Ste. Marie, Ont.

The Steel Company of Canada, Ltd., Hamilton, Ont.

The Dominion Steel Castings Co., Ltd., Hamilton, Ont.

The Wm. Kennedy & Sons, Ltd., Owen Sound, Ont.

Rolled Products, etc.—Complete statistics of the production of rolled products and of manufactured steel have not been received; returns from seven of the largest producers, however, show a production of blooms, billets, slabs, etc., of 739,928 tons, of which 717,658 tons were used by the producer for further manufacture, and 22,270 tons sold to other rolling mills.

The production of rails was 471,422 tons; of rods, 68,174 tons; of bars, 264,226 tons; and of other rolled products, 39,012 tons. The production of steel rails in 1911 was returned as 399,760 tons, and in 1910, 399,762 tons.

The production of finished rolled iron and steel in Canada from 1906 to 1911, as ascertained and published by the American Iron and Steel Association, was as follows, in long tons:—

IRON.—TABLE 18.

Annual Production of Rolled Iron and Steel, 1908-12.

#### BOUNTIES.

Bounties on iron and steel made in Canada were provided for by the Dominion Government in 1897 under the authority of Chapter 6, Statutes of Canada 1897. These bounties were continued under subsequent statutes until 1911. Bounty on pig iron and steel made in electric furnaces was available until December 31, 1912, but no claims therefor were made during the year.

Since 1896 a total of \$16,785,827 has been paid by the Government of Canada in bounties for the production of iron and steel, the annual payments on pig iron, puddled iron bars, steel and manufactures of steel being shown in the following table:—

Total Bounties on Iron and Steel Paid by the Government of Canada Since 1896.

## EXPORTS AND IMPORTS OF IRON AND STEEL GOODS.

The exports of iron and steel from Canada consist chiefly of manufactured goods such as agricultural implements, automobiles, bicycles, machinery, etc. Compared with the value of imports, the total value of the exports is small, amounting to not more than 10 per cent of the former. The total value of iron and steel exported during the calendar year 1912 was \$10,682,484, as compared with a value of exports in 1911 of \$9,907,281, and in 1910, \$7,895,489. The exports during 1912 included pig iron and ferro products, etc., to the value of \$310,702; scrap iron and steel, valued at \$145,250; stoves, gas buoys, castings, machinery, hardware, etc., valued at \$1,290,762; steel and manufactures of steel, \$785,731; agricultural implements, \$5,967,545; automobiles and bicycles, \$2,182,494.

The exports during 1911 in similar grouping were: pig iron and ferro products, \$271,968; scrap iron and steel, \$54,618; stoves, gas buoys, castings, ma-

chinery, hardware, etc., \$1,242,006; steel and manufactures of steel, \$769,692; agricultural implements, \$6,281,929; automobiles and bicycles, \$1,287,068. The principal increase in exports is apparently in automobiles and bicycles. Particulars of these exports during the past two years are shown in further detail in the accompanying table.

Total	400505000	9,907,281			10,682,484	

The total value of the imports of iron and steel goods during the calendar year 1912 was \$124,376,986, as against a value of \$93,171,817 imported in 1911, and \$75,758,594 in 1910. While the total value of the imports during the calendar year is thus shown, it is not convenient to show the imports of detailed items for this period, since the statistics published in the annual reports of the Customs Department cover the fiscal year ending in March.

The total value of the imports for the fiscal year ending March, 1912, was \$102,568,832, as compared with a value of imports during the fiscal year 1911 of \$85,319,541, and \$59,952,197 imported during the fiscal year 1910. The rapid

growth in imports of iron and steel is thus illustrated by the difference in figures covering the fiscal and calendar years, a nine months period. A detailed statement of the imports of iron and steel during the fiscal year is shown in Tables 21 and 22, Table 21 showing the imports subject to the duty, and Table 22 showing the imports free of duty. These imports include all classes of iron and steel goods manufactured as well as those of the cruder form. In many cases the values only of the imported goods are given, so that a total tonnage of imports cannot be estimated. In the case of most of the cruder materials, however, the quantities are given and a compilation of these showing the importation of the cruder forms of iron and steel during the fiscal year ending March, 1912, is shown in Table 20. The quantity of these imports in 1912 was 1,323,348 tons, valued at \$37,709,118, or an average of \$28.50 per ton, as compared with imports of 1,172,380 tons, valued at \$33,838,905, or an average of \$28.84 per ton in 1911. Other iron and steel goods imported during 1912, and of which the weight is not given, were valued at \$64,859,714, and the value of similar imports in 1911 was \$51,480,636.

The imports of the cruder forms of iron and steel included: 200,317 tons of pig iron in 1912, as against 270,102 tons in 1911; ferro products and chrome steel, 18,865 tons in 1912, as against 19,173 tons in the previous year; ingots, blooms, billets, puddled bars, etc., 88,075 tons in 1912, as compared with 48,395 tons in 1911; scrap iron and steel, 82,665 tons in 1912, and 53,824 tons in 1911; plates and sheets, 243,482 tons in 1912, as compared with 205,690 tons in the previous year; bars, rods, hoops, bands, etc., 195,145 tons in 1912, as against 183,865 tons in 1911; structural iron and steel, 268,573 tons in 1912, and 232,585 tons in 1911; steel rails and connexions 98,083 tons, as compared with 36,690 tons in 1911, pipe and fittings, 26,627 in 1912, and 28,831 tons in 1911; nails and spikes, 7,201 tons in 1912, and 3,374 tons in 1911; wire, 69,650 tons in 1912, as against 64,850 tons in 1911; forgings, castings, and manufactures, 24,665 tons in 1912, and 24,992 tons in 1911.

A very large proportion of these imports is derived from the United States, and it may be of interest here to quote from the records published in the 'Commerce and Navigation of the United States,' showing the exports of iron and steel goods from that country to Canada.

According to this authority there were exported to Canada from the United States during the twelve months ending June 30, 1912, 1,175,464 tons of iron and steel goods, valued at \$36,637,305, together with other iron and steel goods of which the weight is not given, valued at \$46,020,989—or a total value of imports from the United States of \$82,658,924.

During the twelve months ending June 30, 1911, the corresponding exports to Canada were 821,526 tons, valued at \$25,544,421, together with other iron and steel goods of which the weight is not given, valued at \$38,738,575—or a total value during the year of \$64,280,996.

The detailed items making up these totals are shown in Table 23. 49509—7

### LEAD.

The following statistics of the production of lead in Canada in 1912 are based on direct smelter returns, and represent mainly the amount of lead refined in Canada, and shipped as pig lead, or manufactured products.

The 1912 output was almost entirely from the mines of British Columbia, and a considerable increase is shown, not only over 1911, but also over 1910, the production being 35,763,476 pounds in 1912, as against 23,784,969 pounds in 1911, and 32,987,508 pounds in 1910. A small shipment was made from Ontario mines, but in regard to this, figures are not available.

In valuing the lead production for 1912, the average price per pound at Montreal has been used. The New York market is practically closed to Canadian lead by the high tariff, and to the London market price must be added the freight, etc., to reach the Canadian market. The price at Montreal, the main Canadian market for lead, is lower than that at New York, and higher than that at London, and is probably a more equitable valuation to place upon Canadian production.

Statistics showing the lead production since 1887 are given in the following table:—

LEAD.—TABLE 1.

<sup>\*</sup> In 1909 and 1910, average prices at Toronto as quoted by Hardware and Metal; in previous years average prices at New York, as quoted by Engineering and Mining Journal.

† Average price at Montreal. Quotations furnished by Messis, Thos. Robertson & Co., Montreal, Que.

Previous to 1904 lead ores mined in Canada were either exported as ore or smelted in Canadian furnaces and exported in the form of base bullion to be refined abroad. A lead refinery employing the Betts Electrolytic Process is

in operation at Trail, B.C., in connexion with the smelter there, and has witnessed frequent enlargements until it is now treating the base bullion produced from all the lead ores smelted at the Trail smelter.

Pig lead, fine gold, fine silver, refined antimony, copper sulphate, and babbit metal are produced at the refinery, and lead pipe is also manufactured there. The refined lead finds a market in Canada, the United States, and the Orient. Of that used in Canada a great part is consumed in the manufacture of white lead, for which the Trail product is especially valuable on account of its purity.

The production of refined lead, including pig lead and lead pipe, etc., has been as follows:—

Year.	Refined lead produced.	Year.	Refined lead produced.
1904 1905 1906 1907 1908	7,519,440 15,804,509 20,471,314 26,607,461 36,549,274	1909 1910 1911 1912	41,883,614 32,987,508 23,784,969 35,715,258

The North American Smelting Company has erected a plant at Kingston, Ontario. This was operated during the latter part of 1912, treating ores from the United States and British Columbia.

Some British Columbian ores were also treated at the Tacoma Smelting Works, Tacoma, Washington, U.S.A.

The price of lead in London averages ½ to 2 cents per pound lower than in New York.

The average price for soft lead in 1912 on the London market was £17 15s. 11d. per long ton (equivalent to 3.921 cents per pound), as compared with £13 19s. 3d. (2.992 cents per pound) in 1911, and £12 19s. (2.775 cents per pound) in 1910.

The price of lead on the Canadian market at Montreal is intermediate between the New York and London values. Montreal is the main Canadian market. The Toronto price in winter is about the same as that at Montreal, but the latter falls, during the period of summer freight rates, about 10 cents per 100 pounds below the former. The average price of lead in Montreal in 1912 was 4.467 cents per pound, against 3.921 in London, and 4.471 cents in New York.

The monthly and yearly average prices of lead in Montreal for the past five years are given in the following table:—

Bounties.—In 1901, and again in 1903, the Dominion Government, to encourage the lead industry, authorized the payment of a bounty on the production of lead. The Act of 1903 provided for the payment, under certain restrictions, of 75 cents per hundred pounds on lead contained in ore mined and smelted in Canada, provided that when the standard price of pig lead in London, England, exceeded £12 10s. per ton of 2,240 pounds, such bounty should be reduced proportionately by the amount of such excess. Thus, when the price of lead in London rose to £16, or over, per long ton, the bounty ceased. As the price of lead exceeded £16 sterling on the London market for a considerable period during 1906 and 1907 the bounty paid during those years was comparatively small.

The Act of 1903 provided that payment of bounty should cease on June 30, 1908, and as only a portion of the funds provided had been used, a new Act was passed in the latter year providing for further bounty payments at the rate of 75 cents per hundred pounds, or approximately £3 10s. per ton of 2,240 49509—8

pounds, subject to the restriction that when the price of lead in London exceeds £14 10s, the bounty shall be reduced by such excess.

The Act of 1908 expired in 1913, and a new Act was passed extending the bounty for a further period of five years, with the same provisions. The text of this Act follows:—

### 3-4 GEORGE V. CHAPTER 29.

An Act Respecting the Payment of Bounties on Lead Contained in Leadbearing Ores Mined in Canada.

[Assented to June 6, 1913.]

Whereas, under the provisions of chapter 31 of the statutes of 1903 and of chapter 43 of the statutes of 1908, as amended by chapter 37 of the statutes of 1910, the amount of bounty payable on lead contained in lead-bearing ores mined in Canada was not to exceed two million four hundred and fifty thousand dollars; and whereas the time within which the said amount is payable for the purpose aforesaid expires, under the provisions of the said chapter 43, on the thirtieth day of June, nineteen hundred and thirteen, and there will then remain unexpended of the said sum approximately six hundred thousand dollars: Therefore His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

- 1. This Act may be cited as The Lead Bounties Act, 1913.
- 2. The Governor in Council may authorize the payment of a bounty of seventy-five cents per one hundred pounds on lead contained in lead-bearing ores mined in Canada, on and after the first day of July, nineteen hundred and thirteen, such bounty to be paid to the producer or vendor of such ores: Provided that the sum to be paid as such bounty shall not exceed two hundred and fifty thousand dollars in any year ending on the thirtieth day of June; provided also that when it appears to the satisfaction of the Minister charged with the administration of this Act that the standard price of pig lead in London, England, exceeds fourteen pounds ten shillings sterling per ton of two thousand two hundred and forty pounds, such bounty shall be reduced by the amount of such excess.
- 2. The total amount of bounty payable under the provisions of chapter 31 of the statutes of 1903, chapter 43 of the statutes of 1908 (as amended by chapter 37 of the statutes of 1910), and of this Act, shall not exceed two million four hundred and fifty thousand dollars.
- 3. Payment of the said bounty may be made from time to time to the extent of sixty per cent upon smelter returns showing that the ore has been delivered for smelting at a smelter in Canada. The remaining forty per cent may be paid at the close of the fiscal year, upon evidence that all such ore has been smelted in Canada.

- 2. If at the close of any year it appears that during the year the quantity of lead produced on which the bounty is authorized, exceeds sixteen thousand six hundred and sixty-seven tons of two thousand pounds, the rate of bounty shall be reduced to such sum as will bring the payments for the year within the limit mentioned in section 2 of this Act.
- 4. If at any time it appears to the satisfaction of the Governor in Council that the charges for transportation and treatment of lead ores in Canada are excessive, or that there is any discrimination which prevents the smelting of such ores in Canada on fair and reasonable terms, the Governor in Council may authorize the payment of bounty, at such reduced rates as he deems just, on the lead contained in such ores mined in Canada and exported for treatment abroad.
- 5. If at any time it appears to the satisfaction of the Governor in Council that products of lead are manufactured in Canada direct from lead ores mined in Canada without the intervention of the smelting process, the Governor in Council may make such provision as he deems equitable to extend the benefits of this Act to the producers of such ores.
- 6. The Governor in Council may make regulations for carrying out the intention of this Act.
- 7. The bounties payable under the provisions of this Act shall cease and determine on the thirtieth day of June, one thousand nine hundred and eighteen.

The regulations under which the Act is administered are as follows:-

- 1. The Minister of Trade and Commerce is charged with the administration of this Act.
- 2. All producers or vendors of lead-bearing orcs who desire to avail themselves of the provisions of the Act above quoted, and to be paid bounty, shall, before making claim for such bounty, notify the Minister of their intention to claim under the provisions of the Act, and shall declare the name of the mine producing such ore, its situation, the names of the president, secretary, and manager, as well as the name of the official authorized to make claim. Notice shall be given the Minister of changes in ownership and management. Where the bounty is claimed by lessees, the consent of the owner shall be shown.
- 3. All claims for the payment of bounty shall be made and substantiated under the oath of the manager of the mine, or of the official authorized to make the claim.
- 4. Claims may be made monthly, that is, immediately after the close of each calendar month, and be in such form, and contain such evidence, as may seem to the Minister, from time to time, necessary.

49509 - 81

- 5. No claims made otherwise than in conformity with these regulations, and in form required by the Minister, shall be recognized, allowed or paid by the Minister.
- 6. The smelting of all such ores shall at all times be under the supervision of the officer of the Department of Trade and Commerce, appointed or detailed for the purpose.
- 7. The supervising officer may at any time demand and receive a portion of the floor sample of any ore delivered at the smelter for smelting purposes.
- 8. The rate of bounty shall be computed according to the London quotation upon the day the ore is taken into stock at the smelter, such day not to be later than the last day of the calendar month daring which the ore was unloaded from cars at the smelter grounds.
- 9. The lead contents of ores shall, for the purpose of this Act, be ascertained by fire assay, as used in ordinary commercial assaying.
- 10. The books of the claimants, and those of the smelting works at which the ore is smelted, shall be at all times open to the inspection of such supervising officer, and of any officer of the Department of Trade and Commerce who may be detailed by the Minister for the purpose.
- 11. All claims shall be substantiated by the oath of the Manager of the smelting works at which the ores are smelted, and shall be verified and certified to by the officer of the Department of Trade and Commerce appointed to supervise the smelting at the works where it has been carried on.
- 12. The cost of the supervision shall be paid by the claimants and may be deducted pro rata according to the quantity smelted during the fiscal year, from the amount payable to such claimants at the close of each fiscal year.

Exports and Imports.—According to Trade and Navigation reports, the total quantity of lead contained in ore and concentrates exported during the

calendar year 1912 was 299,240 pounds, valued at \$8,193. During 1911 the total export, including also pig lead, was 137,061 pounds, valued at \$4,632.

Details of exports 1908 to 1912 are as follows:-

The imports of white and red lead and orange mineral in 1912 amounted to 5,753,854 pounds, valued at \$290,122. In 1903 the imports were 19,208,786 pounds, the falling off being due to the establishment of corroding works in Canada.

Detailed statistics of imports of lead pigments during the calendar years 1910, 1911, and 1912 are as follows, the statistics of imports since 1885 being shown in Table 6:—

# Imports of White and Red Lead in 1910, 1911, and 1912.

1898	12,682,808	448,659	3 54	1912	3,810,971	158,860	4 17

The production of lead as already shown was, in 1912, 17,882 tons, while the exports of lead were 149 tons, leaving 17,733 tons as the consumption of Canadian lead.

The imports of lead during the calendar year 1912 are shown to have been 20,880 tons, not including certain manufactures of lead, valued at \$144,571, so that the total consumption of lead in 1912 probably exceeded 39,000 tons.

#### Nova Scotia.

There was no production from this Province during the year. There was, however, a certain amount of prospecting and development work done near Musquodoboit and East Bay.

#### Quebec.

No production is reported. Development work was done at several points, including Calumet island, and also in Portneuf county.

#### Ontario.

A small shipment was made during the year, but details are not available. At Kingston two smelters have been erected by the Buffalo and Ontario Smelting and Refining Co., and by the North American Smelting Co. The former propose to treat ores from the Cobalt district mainly, while the latter were operating during the latter portion of the year on lead ores from British Columbia and from the United States.

### British Columbia.

As already stated, almost all the production of 1912 was from British Columbia, and there was a decided increase, as is shown in Table 7 following.

The record given in this table for the years 1909 to 1912, inclusive, represents the recovery of lead at smelter or refinery as distinguished from the figures given for the same years in Table 8, which indicate the quantities of lead in ore sent to the smelters.

From the Report of the Minister of Mines, B. C.

The increased output of this Province, in 1912, is due to the greater activity apparent in almost all the lead mining camps. In the West Kootenay division, the Slocan, and Ainsworth districts were heavier shippers than usual. Nelson contributed to the total, while, as usual, the East Kootenay properties produced a large tonnage.

The return of the Blue Bell, in Ainsworth district, added another heavy shipper to the list.

Interest now centres round the silver-lead properties of Hazelton, in the Omineca. Though expected to ship in 1912, they were unable to do so until transportation arrangements were completed. The first shipments were made in January, 1913, and it is hoped are but the forerunners of a steady and increasing production.

### NICKEL.

The mining and metallurgical treatment of the nickel-copper ores of the Sudbury district of Ontario has become one of the most important of Canada's metal mining industries, and special interest is attached to this industry because, at the present time, these deposits supply a very large portion of the world's consumption of nickel, and also because the present known available supplies of ore in the district appear to be sufficient for many years' operations. The past year's development work has largely increased the known ore reserves. Additional interest is lent to these ores by the valuable properties of the alloy of nickel and copper recently introduced to commerce under the name of monel metal, of which some particulars were given in the report for 1908.

These nickel-copper ore deposits have been the subject of special reports by the Mines Branch and Geological Survey, Ottawa, and by the Ontario Bureau of Mines at Toronto.' To these reports reference may be made for comprehensive descriptions of the geology of the district.

During 1912, shipments of nickel-copper ore were also made from the Alexo mine, near Kilburn, on the Porcupine branch of the Timiskaming and Northern Ontario railway, to the Mond Nickel Company, at Victoria Mines.

The production of ore and its reduction to a Bessemer matte was carried on during 1912 to a greater extent than in any previous year. There were mined during the year, 737,726 tons of ore, much of which is subjected to open air heap roasting before being smelted. There were smelted 725,065 tons, from which were produced 41,925 tons of Bessemer matte, carrying approximately 22,421 tons of nickel and 11,116 tons of copper. The net value of the matte was returned as \$6,303,102. The matte, which is shipped to the United States and Great Britain for refining, carries about 80 per cent of the combined metals, having averaged for the past year 53.5 per cent of nickel and 26.3 per cent in copper.

For the production of monel metal, a special matte is produced with contents of 22 per cent copper and 58 per cent nickel, which is included in the total given above. Monel metal is produced from this special matte without the intermediate refining of either the nickel or the copper.

Compared with 1911 there was an increase in matte production, in 1912, of 9,318 tons, or 28.6 per cent, and the increase in total nickel content of matte was 5,372 tons, or 31.5 per cent. The total copper content of the matte was 11,116 tons, an increase of 2,150 tons, or 22.3 per cent.

<sup>&</sup>lt;sup>1</sup> Report on Nickel and Copper Deposits of Sudbury, Ont., by A. E. Barlow, Geological Survey, Canada. No. 873, 1901.

The Sudbury Nickel Region, by A. P. Coleman, Ph.D., Bureau of Mines, Vol. XIV, Part III, 1904.

The Nickel Industry, with special reference to the Sudbury Region, Ont. Report by A. P. Coleman, Ph.D., Mines Branch, Ottawa, No. 170, 1913.

The following were the aggregate results of the operations on the nickel-copper deposits of Ontario during the past four years:—

	1959. Tons of 2,000 lbs.	1910. Tons of 2,000 lbs.	1911. Tons of 2,000 lbs.	1912. Tons of 2,000 lbs.
Ore mined. One smelted. Eassemer matte produced. Copper content of matte. Nickel	451,892	652,392	612,511	737,726
	462,336	628,947	610,834	725,065
	25,845	35,033	32,607	41,925
	7,873	9,630	8,966	11,116
	13,141	18,636	17,049	22,421
Spot value of matte	\$3,913,017	\$5,380,064	84,945,592	\$6,303,102
	1,234,904	1,698,152	1,830,526	2,626,609
	1,573	1,882	1,885	3,110

According to Customs returns, exports of nickel in matte, etc., were, for the twelve months ending December 31, as follows:—

	1908.	1909.	1910.	1911.	1912.
	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.
To Great Britain	2,554,486 16,865,407	3,843,763 21,772,635	5,335,331 30,679,451	5,023,393 27,596,578	5,072,867 39,148,993
	19,419,893	25,616,398	36,014,782	32,619,971	44,221,860

The above figures of production do not include the nickel content of the silver-cobalt ores from the Cobalt district, of which it is difficult to obtain complete statistics. The shippers of silver-cobalt ores receive no return for the nickel content, although this metal forms an important constituent of the ore, and is probably to some extent saved by the refiners. Plants have been established by the Coniagas Reduction Company at Thorold, and the Deloro Mining and Reduction Company at Deloro, for the recovery of nickel and cobalt oxides.

During 1912 there were shipped from the cobalt-silver smelting works of Ontario, 349,054 pounds of cobalt oxide and nickel oxide, and 1,285,280 pounds of mixed cobalt and nickel oxides and cobalt material, having a total value of \$320,244.

Bounty on Refined Nickel and Nickel Oxides.—Under the terms of 'The Metal Refining Act, 1907,' of the Province of Ontario (7 Edward VII, Chapter XIV), a bounty is authorized to be paid on nickel, cobalt, copper, and arsenic under certain conditions and restrictions during a period of five years following the passing of the Act (April, 1907). In March, 1912, the Act was amended to cover a further period of five years.

The sections affecting nickel ore are as follows:--

'The treasurer of the Province may, under the authority of such regulations as may from time to time be made in that behalf by the LieutenantGovernor in Council, pay in each year to the refiners of the metals or metal compounds hereinafter specified when refined in the Province from ores raised and mined in the Province, a bounty upon each pound of such metal or compound so refined, as follows:—

'Class I. On refined metallic nickel or on refined oxide of nickel, 6 cents per pound on the free metallic nickel or on the nickel contained in the nickel oxide; but nickel on which a bounty has already been paid in one form of product, shall not be entitled to any further bounty in any other form, and the amount to be paid as bounty on the nickel products herein mentioned is not to exceed in all \$60,000 in any one year.'

The full text of the Act will be found in the chapter on 'Cobalt.'

The price of refined nickel in New York during 1912 was quoted at from 40 to 45 cents per pound. Quotations being: large lots, contract basis, 40 to 45 cents a pound; retail spot, from 50 cents for 500 pound lots up to 55 cents for 200 pound lots. Price of electrolytic, 5 cents higher.

During 1911 the price of refined nickel was quoted in New York at from 40 to 45 cents per pound, according to size and terms of order.

Monel metal is finding an extended use in commerce; as this is put on the market at a price much lower than the final value of the metal content, an allowance has been made by adopting a lower price per pound for the nickel production than market quotations.

Statistics of the quantities of nickel contained in matte produced are shown in the following table, the values being based on the final value of the metal, either as refined or as monel metal.

Statistics of the quantities of ore mined and smelted, matte produced, etc., will be found in the chapter on 'Smelter Production.'

<sup>&</sup>quot; Calculated from shipments made by rail.

The companies engaged in mining and smelting nickel ores are: The Canadian Copper Company (the International Nickel Company, Copper Cliff, Ont., and New York); the Mond Nickel Company, Coniston, Ont., and London, England. The latter Company has crected a new smelter at Coniston, Ontario, to replace that at Victoria Mines. A new company is entering this field: the Dominion Nickel-Copper Company. A number of mining properties have been secured, as well as a smelter site near Massey, Ontario.

The Alexo mine on the l'orcupine branch of the Timiskaming and Northern Ontario railway, produced during the year, shipping nickel-copper ore to the Mond smelter at Victoria Mines.

Reference has already been made to the occurrence of nickel as one of the minor constituents of the silver ores of the Cobalt district. The quantity of nickel contained in the ores from this district has been estimated by the Ontario Bureau of Mines, as follows:—

Year.	Ore and concentrates shipped.	Nickel content (estimated.)
	Tons.	Tons.
1904	158 2,144 5,335 14,788 25,624 30,677 34,282 26,653 21,933	14 75 160 370 612 766 604 392 429

A large portion of these ores, particularly the high grade, is now being reduced at Thorold, Deloro, and Orillia, and shipments were made to three new smelters at Kingston, North Bay, and Welland.

At some of these plants, in addition to silver bullion and white arsenic, there is a recovery of nickel oxide and cobalt oxide.

Statistics of the exports of nickel, as compiled from the Customs Department reports, are shown in Table 2, and imports in Table 3.

During the calendar year 1912 there was an import of 'nickel, nickel-silver, and German-silver in ingots or blocks' to the extent of 48,245 pounds, valued at \$17,957, and 'nickel in bars and rods,' 619,523 pounds, valued at \$154,387.

The only other important producer of nickel ore outside of Canada is the French colony of New Caledonia. The exports of nickel from this source since 1898 have been as follows in metric tons:—

# Exports of Nickel Ore from New Caledonia.

Year.	Metric tons.	Year.	Metric tons.	Year.	Metric tons
1898 1899 1900 1901 1902	103,908 100,319 133,814	1903. 1904. 1905. 1906. 1907.	98,655 125,289	1908	86,000 99,000 2142,000

<sup>&</sup>lt;sup>1</sup> Statistique de l'Industrie Minérale en France et en Algérie, Paris. Production

The nickel ore of New Caledonia carries about 6½ per cent of nickel. Practically all the above ore is smelted in France, Germany, and England.

The 'Statistique de l'Industrie Minérale en France et en Algérie 1911' states: 'The production of nickel from New Caledonia ores took place at two plants situated, respectively, at Havre and Dieppe. The output of this metal was, in 1911, 1880 metric tons, a decrease from 2,000 tons in 1910. Its value was, as formerly, 3,500 francs per ton.

'New Caledonia.—The production of nickel ore in 1911 was 142,000 metric tons, against 99,000 tons in 1910. The exports are made up as follows: 120,000 tons of ore, valued at 3,600,000 francs, or 30 francs per ton, and 2,950 tons of matte, valued at 2,137,600 francs, or 724 francs per ton.'

The production of raw nickel at smelting works (partly estimated) is given by the Metallgesellschaft as follows, in metric tons:—

Production of Raw Nickel at Smelting Works, in Metric Tons.

Producing country.	1904.	1905.	1906.	1907.	1908.	1909.	1910.	1911.	1912.
United States of North America and Canada England Germany France Other countries Total production 2	6,000 2,200 2,000 1,800	4,500 3,100 2,700 2,200 12,500	6,500 3,200 2,800 1,800	2,600 1,800	7,000 3,000 3,000 1,400 200	9,000 3,200 3,500 1,200 400	10,000 3,500 4,500 1,500 600 20,100	4,500 5,000 2,000 1,000	5,000 2,100 1,200

<sup>&</sup>lt;sup>1</sup> The figures of production stated for Germany only cover the output in the Kingdom of Prussia; nickel is also produced in the Kingdom of Saxony, but no data are obtainable of this production, which is, however, not important.

duction, which is, however, not important.

The entire production of nickel, apart from quite insignificant quantities obtained in Germany, Norway, and the United States of America, comes from New Caledonian and Canadian ores.

Statistics of the average yearly prices in Europe as given by the same authority are as follows:—

Yearly Average Prices of Nickel in Europe in Cents per Pound, and Marks per Kilogram.

# SILVER.

Silver has, with the rapid development of the Cobalt camp in Ontario, risen in point of total value of output to second place in the list of our mineral products, being exceeded only by coal.

In 1912 the total production of silver, including that produced as bullion and the metal estimated as recovered from ores sent to smelters or otherwise treated, was reported as 31,955,560 fine ounces which, compared with a production of 32,559,044 ounces in 1911, shows a decrease of 1.85 per cent.

The average value of fine silver in 1912 was, however, according to New York quotations, 60.835 cents per ounce, as compared with an average value of 53.304 cents in 1911, an increase of about 14.13 per cent.

The total value of the silver production in 1912 was \$19,440,165, an increase of 12.01 per cent over the value, \$17,355,272, in 1911.

A comparison of the production of 1911 and 1910 shows a decrease for 1911 of 310,220 ounces, or 0.94 per cent in quantity, and \$225,183, or 1.28 per cent in value, the average price having decreased about 0.34 per cent from 1910.

Statistics of the annual production of silver since 1887 are shown in Table 1.

SILVER.—TABLE 1.

1898	4,452,333	2,593,929	58 26	1911	32,559,044	17,355,272	
1899	3,411,644	2,032,658	59:58	1912	31,995,560	19,440,165	60.83

From 1887 to 1893 the production ranged in value between \$300,000 and \$400,000, and was derived chiefly from the Provinces of Ontario and Quebec. The next three years saw a rapid increase in the production, due to the development of the silver-lead deposits of British Columbia, and in 1896 a production of over \$2,000,000 is recorded. From that year until 1905 the production varied from \$2,000,000 to \$3,500,000, rising rapidly during the next six years to \$17,355,272, in 1911, as a result of the discovery of the rich ores of the Cobalt

district. In 1912 there was again a considerable increase in value, though there was actually a falling off in the number of ounces produced.

Ontario, in 1905, produced 40.9 per cent of the total output of Canada; in 1911, the production was 93.8 per cent—practically all from the Cobalt district.

In 1912, Ontario produced 91.3 per cent, while the contribution of British Columbia rose to 8.3 per cent. Statistics of the annual production in each province are separately shown in Table 2.

The average price of fine silver in New York during 1912 varied between a minimum of 54% cents per ounce in January, and a maximum of 64% cents in October, the average price for the year being 60.835 cents per ounce.

In London the average price of silver in 1912 was 28.042 pence per standard ounce of a fineness of 0.925. For the year 1911 the average price per fine ounce in New York was 53.304 cents, the highest being 55.7 cents in November, and the lowest 52.1 cents in August of that year.

The average monthly prices of silver in New York from 1908 to 1912, and in London during 1912, are shown in tabulated form following:—

## Average Monthly Prices of Silver.

Months.	1	London.— Pence per Standard ounce (a).

(a) 925 parts fine.

Important quantities of silver are now being produced in Canada, both as fine metal and as silver bullion, ranging in fineness from 850 to 998.2. Fine silver is produced at Trail, B.C., by the Consolidated Mining and Smelting Company of Canada, Limited, chiefly from the silver-lead ores of that Province, and is shipped to China, the United States, and to the Ottawa mint.

The annual production of fine silver at Trail since 1904 has been as follows:—

Year.	Fine ozs.	Year.	Fine ozs.
1904 1905 1906 1907 1908 1909	551,450 1,088,328 1,263,809 1,631,422 1,956,039 2,003,003	1910. 1911. 1912. Total	1,798,960 1,325,601 1,896,999 13,515,611

In Ontario, ores from the Cobalt district are treated by:-

The Canada Smelting and Refining Co., Orillia, Ont.

Coniagas Reduction Co., Thorold, Ont.

Deloro Mining and Reduction Co., Deloro, Ont.

Buffalo and Ontario Smelting and Refining Co., Kingston, Ont.

Dominion Refineries, North Bay, Out.

Metals Chemical Co., Welland, Ont.

The Canadian Copper Company, which was treating ores from this district, closed down their plant at the end of 1912.

Silver bullion of a fineness varying from S50 to 998.2 is produced at the works, other products being white arsenic, and, more recently, nickel and cobalt oxides or mixed oxides. The silver bullion, as a rule, finds a market in the United States and in England.

Bullion shipped in 1907 contained 4,449,722 fine ounces of silver; in 1908, 11,168,689 ounces; in 1909, 14,385,985 ounces; in 1910, 17,365,165 ounces; and in 1911, 17,753,167 fine ounces. In 1912 these smelters produced 15,675,218 fine ounces, while United States smelters report a content of 8,463,288 ounces silver in 25,758,282 pounds of ore received.

#### Quebec.

The small quantity of silver credited to Quebec province for a number of years represents a small silver content of the pyritic ores mined at Eustis and Weedon, in the Eastern Townships.

#### Ontario.

From a production of \$118,376, in 1904, the silver output of the Province has grown to a value of \$17,772,352, in 1912. Not only does this constitute about 91.3 per cent of the total production of Canada, but it forms about 13 per cent of the production of the world, Canada, as a whole, ranking third among the producers, with a contribution of about 15 per cent.

According to returns received by this Department, there were shipped during 1912, 17,899 tons of ore, and 11,217 tons of concentrates, or a total of 29,116 tons, having a value of \$14,855,169, besides silver bullion shipped, carrying 4,778,852 fine ounces of silver.

The silver content of ore shipped was estimated as 15,929,289 ounces, or an average of 890 ounces per ton, and the concentrates shipped as 9,774,697 ounces, or an average of 871 ounces per ton, the total silver content of ore concentrates and bullion shipped from Cobalt district being 30,482,838 ounces. The mine owners receive payment for only 93 to 98 per cent of the silver content, and in estimating and valuing the production a deduction of 5 per cent is made from silver contained in ore and concentrates to cover losses in smelting and refining. On this basis, the silver recovery is estimated at 29,197,639 ounces, and valued at \$17,762,384.

No payments for cobalt content were reported, but considerable interest was aroused by the news of payment being made for a small copper content in several shipments.

In the following table a record of shipments since 1904 is given, the figures for the first three years being those published by the Ontario Bureau of Mines:—

# Silver Ore and Bullion Shipments from Cobalt Mines, 1904-1912.

<sup>\*</sup> Included with ore.

As the camp has developed the average grade of ore shipped has gradually diminished. The introduction of concentration plants in 1908 has tended to keep the ore shipped up to a high standard, but again there is a tendency to convert the ore directly into bullion for shipment, and treat the high grade ore also at the mines.

During 1912 payment was not made for the cobalt nickel or arsenic content of the ore, and in some cases the latter was penalized.

The total metal content of these ores, as estimated by the Ontario Bureau of Mines, is shown in the next table. The figures for ore shipments and silver content, while not identical, agree very closely with those given in the previous table.

Total Production Cobalt Mines, 1904-1912.\*\*

<sup>\*</sup> As per Ontario Bureau of Mines.

<sup>†</sup> Bullion shipments from mines included.

About 28 per cent of the ore shipped from Cobalt was treated in metallurgical works in Canada, and white arsenic is being produced therefrom, of which record will be found under 'Smelter Production.'

While the greater number of the mining companies hold unrestricted titles to their properties, several are operated on a royalty basis on mining lands owned and leased by the Timiskaming and Northern Ontario Railway Commission. Mr. Arthur A. Cole, Mining Engineer to the Commission, has, in his annual report, compiled some very interesting statistics covering the whole district with respect to ore shipments, concentration, power, and labour, etc., from which the following tables and extracts have been drawn:—

136

\*December shipments made by the General Mines Ltd., they having acquired this property.

The General Mines Ltd., is operating the Red Rock, Ruby, Cobalt Contact, and the Agaunico (formerly Timiskaming Cobalt).

‡Formerly the Cobalt Central.

‡Seneca Superior Lease.

#### CONCENTRATION.

The reduction of low grade ores at Cobalt plays a more important part each year in the history of the district. Thus the year 1912 reached a new record, the mills having treated a total of 455,516 tons. With the enlargements either planned or already accomplished at the Northern Customs, Beaver, McKinley-Darragh, Cobalt Lake, and Casey mills, 1913 bids fair to show further substantial increases.

During 1912 the Penn-Canadian mill, formerly known as the Cobalt Central, was reopened, and the new mills of the Beaver, Nipissing, and Casey were put into commission.

The high grade mill of the Nipissing operated steadily during the year, and the Buffalo completed a similar mill and started operations towards the end of the year.

#### Dominion Reduction Mill.

This mill, which was formerly known as the Nova Scotia mill, recommenced operations, and is now working steadily on ores from the Crown Reserve and Kerr Lake. The amalgamating pans formerly used are to be replaced by a tube-mill, the discharge from which will go to agitators for the fine ground concentrate product for separate cyanidation, and no residues will be shipped to the smelter.

### Buffalo Mill.

The concentrates from this mill are now treated in the Company's highgrade mill. Besides this, the cyanide plant recovered 100,224 ounces silver from the slimes treated.

### O'Brien Mill.

This mill produced and shipped 313 tons of concentrates, which contained 229,271 ounces silver, and also recovered in their cyanide plant 229,360 fine ounces silver, valued at \$141,765.

### Nipissing Low Grade Mill.

This new mill did not start operations until late in the year, which will explain the small quantity treated. The 116 tons of concentrates made were sent to the high grade mill for treatment, and the amount of silver recovered by cyaniding the remainder was 57,875 ounces, valued at \$35,882.

The only mill idle in the camp at the end of the year was the Silver Cliff, and this was reopened early in 1913.

### High Grade Mill, Nipissing Mining Company.

Owing to the great complexity of the high-grade silver ores of the Cobalt district, and particularly on account of their high arsenic contents, they have

always been considered undesirable ores by the ordinary custom smelter. A heavy smelting charge was consequently exacted by the smelters for their treatment.

Experiments were carried on by the Nipissing Mining Company for a considerable length of time in an endeavour, if possible, to find some method of treating the ore in the district so that the final product to be shipped out should be refined silver bullion. A simple and effective process was finally worked out by Charles Butters, assisted by G. H. Clevenger. The plant, which was designed and constructed by James Johnston, commenced operations February 1, 1911, and has run successfully ever since.

# High Grade Mill, Buffalo Mines, Limited.

During the summer the Buffalo Mines erected a mill for the treatment of their high grade ore and concentrates, and the mill commenced operations at the end of November. The method of treatment adopted is very similar to that already in operation at the Nipissing high grade mill.

By December 31, 1912, this mill had treated 105 tons of concentrates, along with metallics, precipitates, and resmelted bullion, producing 205,302 ounces of fine silver bullion.

# Sampling.

The Campbell and Deyell customs sampling works at Cobalt operated continuously during the year. For the twelve months ending September 30, 1912, 5,604 tons of ore, containing 12,655,450 ounces of silver, were sampled in these works. During the same period about 100 tons of gold ore were sampled.

The ore is crushed in a Krupp ball mill, fitted with 8-mesh screens. All metallics coarser than this mesh remain in the mill and are subsequently removed and melted down to bullion. The pulp can then be sampled with a reasonable degree of accuracy. The ground ore is divided into quarters, and each quarter sampled down separately by machines to \(\frac{1}{1000}\) of its bulk. These samples are then ground to pass 100-mesh, and divided into the requisite number of packets.

# Freight Rates.

Shipments are billed at the highest rates, and charges are collected at destination accordingly. On presentation of paid expense bill, and signed assay certificate from the smelter, showing the value of the ore to be less than the rating of Group D of schedule, charges are adjusted in accordance with the valuation to the above rates. The smelter returns to the mine or owner, before deducting transportation charges, are the values used in determining the freight rates.

### Smelting.

The shipments of Cobalt ores during 1912 were mostly treated by the same smelters as received the production of the previous year. In Canada the bulk of the output went to the

- (1) Canadian Copper Company, Copper Cliff, Ont.
- (2) Canada Smelting and Refining Company, Orillia, Ont.
- (3) Coniagas Reduction Company, Thorold, Ont.
- (4) Deloro Mining and Reduction Company, Deloro, Ont.

A few consignments were also made to three new plants which commenced operations during the year, viz.,

- (5) Buffalo and Ontario Smelting and Refining Company, Kingston, Ont.
- (6) Dominion Refineries, North Bay, Ont.
- (7) Metals Chemical Company, Welland, Ont.

Of the foreign shipments, all went to the United States with the exception of a few high grade shipments from the Crown Reserve mine to the Government of Saxony. The American smelting companies in this market were the

- (8) American Smelting and Refining Company, at their works at Perth Amboy, Omaha, and Denver, and
- (9) The Pennsylvania Smelting Company, Carnegie, Pa.,

while occasional consignments were taken by the

- (10) Balbach Smelting and Refining Company, Newark, N.J., and the
- (11) United States Metals Refining Company, Chrome, N.J.

As most of the Canadian plants produce refined cobalt oxide, the disorganized state of the market for this material has made it impossible at times to profitably dispose of their output, and they, therefore, welcomed a betterment of the market towards the end of the year.

When the smelters started treating Cobalt ores, cobalt oxide was selling at \$2.50 per pound, but the consumption was so limited that the production from the Cobalt district soon glutted the market. Now the retail price quoted in New York is about 90 cents per pound, with an import duty of 25 cents per pound. It is selling in England and Europe at from 2s. 3d. to 3 shillings per pound, or about 68 cents, and the price paid to the smelters is necessarily still lower.

The Canadian smelters now supply practically the entire world's market with cobalt oxide of excellent grade, and if new uses are found for cobalt they are ready to increase the output and supply the demand.

The Canadian Copper Company decided to close down its Cobalt plant and received its last shipment of cobalt ore towards the end of October. Since that

time operations have been continued simply as a final clean-up to recover the values tied up in ore on hand, residues, furnace bottoms, etc.

The small smelting plant at North Bay is bidding for ore, rich in cobalt and low in silver.

The smelting schedules were practically unchanged from those in effect in 1911.

The ores shipped to the smelters will average about 1,000 ounces silver per ton, between the limits of 75 ounces and 7,000 ounces. A few exceptional shipments are known to have assayed even above this latter figure, the highest shipment recorded being one of 20 tons from the Crown Reserve mine, which assayed 8,903 ounces silver per ton.

A number of the shipping mines at Cobalt have published annual reports, some details of the operations from which the following extracts have been taken:—

# Beaver Consolidated Mines, Limited.

Year ending February 28, 1913.

Following is the record of development and stoping for the year: drifting, 3,414.5 feet; cross-cutting, 744.5 feet; sinking, 185.5 feet; raising, 157 feet; total, 4,501.5 feet.

During the year two levels have been added to the property, making ten in all. The main shaft is now down to a depth of 730 feet, but the last station is cut at 700 feet, leaving a 30 ft. sump in preparation for resuming sinking.

Mill.—The concentrating mill which has been in operation for practically a year has given such good results that it was deemed advisable to increase the capacity, and we are now milling close to 100 tons daily, instead of 50. While the mill was constructed more especially to treat the big dump which had accumulated, it might be noted that the underground development has been so productive of milling ore that the dump remains almost intact. Mill report, March 15, 1912, to February 28, 1913: ore milled, 17,842 tons; concentrates produced, 289 tons; silver in concentrates, 278,511.69 ounces. Net profit, exclusive of all milling and marketing costs, \$123,655.34. The heads averaged 21.48 ounces and the tails 3.9 ounces, giving an extraction of 81.8 per cent.

#### The Bullato Mines, Limited.

Year ending April 30, 1913.

Drifting, total	1,762 feet for the year.
Raising, increase	30 "
Station cutting, total	
Total shaft work to date	1,074 "
Total drifting	11,947 "
Total stoping	1,697,572 cubic feet.

Mill.—The mill treated, during the year, 55,783 tons, averaging 45.83 ounces of silver per ton, or a total of 2,556,403 ounces treated, of which 82.64 per cent was recovered as follows: 39,798 ounces in amalgams; 982,697 ounces in jig concentrates; 1,090,189 ounces in table concentrates; or a total of 2,122,684 ounces recovered by concentration.

The new amalgamation plant and refinery were put in commission the latter part of November, 1912.

# Cobalt Lake Mining Company, Limited.

Year ending December 31, 1912.

During the year the concentrator was operated 312 days, and crushed 23,410.4 tons of ore, containing an average silver content of approximately 28 ounces per ton. From this has been produced 664.1 tons of concentrates, containing 541,570.5 ounces of silver. This figure is based on smelter returns except for two cars for which the mine estimate, arrived at by daily sampling, was used. Total cost of mill operation and maintenance for the year is \$42,845.46, or \$1.83 per ton. This includes cost of assay office.

Mining.—Drifting, 1,319.4 feet; cross-cutting, 1,885.6 feet; raising, 90 feet; winzes, 104 feet; shaft sinking, 68 feet; total for year, 3,467 feet. Total to January 1, 1913, 9,749.18 feet.

# The Coniagas Mines, Limited.

Year ending October 31, 1912.

The total silver shipments from this mine during the past year amount to 3,508,377.27 ounces, which was contained in 650 tons of mine ore, and 1,287 tons of concentrates. This ore was mined and concentrated at the mine at a net cost of 8.515 cents per ounce, which is an exceedingly low figure, as it includes head office expenses and royalties, and all expenses exclusive of shipping, smelting, refining, and marketing charges, which amounted to 4.445 cents per ounce of silver. The average price received per ounce of silver was 59.39 cents, as compared with 53.175 cents for the previous year.

The total tonnage of ore milled was 53,627, or an average of 2.86 tons per stamp per 24 hours. There were 803.3 tons high grade concentrates shipped and 484.2 tons of low grade slimes. The heads to the mill average 34.12 ounces per ton.

The sand tailings from the mill average 4.12 ounces per ton, and the slime tailings, 7.29 ounces per ton. They are stacked separately on the Company's property.

Work done during the year:-

Drifting, 2,773 feet; cross-cutting, 1,401 feet; winzes, 112 feet; raises, 298 feet.

### Crown Reserve Mining Company, Limited.

Year ending December 31, 1912.

Mine development for year:-

te development for year:		
Sinking and raising	432	feet.
Drifting	973	46
Cross-cutting	184	cc
Total	589	66
Total to date	798	- 66

Concentration.—During the year the Nova Scotia Mining Company went into liquidation, the plant and equipment being taken over by the Dominion Reduction Company, with which Company the Coniagas Mines, Limited, renewed their contract for the treatment of their milling ore.

The results of concentration for the year are as follows:-

Tons milled	15,704
Ounces of silver returned	336,233
Ounces per ton	21.41
Total cost per ton	\$4.39
Cost per ounce	19.92 cents.

The Hudson Bay Mines, Limited.

Year ending August 31, 1912. Average assay of shipments:—

> High grade ore, 3,431.6 ounces silver per ton. Concentrates, 855.73 ounces silver per ton.

The total number of ounces of silver produced during the year was 957,055.47, the gross value of which was \$561,992.80. The total cost of production was \$143,061.90, or 14.948 cents per ounce of silver.

During the year 13,939.2 tons of low grade ore were sent to the concentrator from the mine, and 7,500 tons were taken from the dumps, making a total of 21,439.2 tons of ore run through the crushers, or 21,221.5 tons treated by the stamps. This ore was concentrated to 721.2 tons, carrying approximately 617,155.7 ounces of silver, the ratio of concentration being approximately 30 into 1.

High grade ore to the amount of 99.05 tons was produced by the mine, carrying approximately 339,899.60 ounces of silver.

Development During Year.—Drifting, 1,195.8 lineal feet; cross-cutting. 1,653.9 lineal feet; total, 2,849.7 lineal feet.

Average cost of drifting, 10.04 cents per foot; average cost of cutting, 10.38 cents per foot.

### Kerr Lake Mining Company.

Year ending August 31, 1912.

Production of silver by this operating company for the year amounted to 1,855,495 ounces. Of this, 1,741,804 ounces were produced from high grade, and 113,691 ounces from milling ore which was sent to customs mill for treatment.

The average price which the Company received for its silver for the year was 60 cents per ounce. The total cost of production per ounce of silver was 18.3 cents, made up as follows:—

Mining cost	12.1 cents.
Shipment and treatment	5.55 "
Administration and general	0.65 "

This is higher than last year on account of smaller production, and the necessity of obtaining ore from narrow veins.

### La Rose Consolidated Mining Company.

Year ending December 31, 1912.

Summary of Results.—The year's work has resulted in a profit of \$1,023,142.54, derived from the production of 2,816,597 ounces of silver.

The price received for silver was 61.66 cents per ounce, compared with 53.55 cents per ounce received in 1911. This increase of 8.11 cents per ounce was largely offset by an increase of 6.73 cents per ounce in the cost of production. The latter is due to the fact that more development work was done than ever before, and that while the amount of ore produced was practically the same, the average grade of the high grade ore dropped from 1,731 ounces to 1,307 ounces per ton.

### The McKinley-Darragh-Savaye Mines of Cobalt, Limited.

Calendar year 1912.

McKinley Mine.—Drifting, 3,085 feet; cross-cutting, 1,819 feet; raising, 332 feet; winzes, 100 feet; total footage, 5,336 feet; stoping, 31,801, broken.

Mill Report.—Total ore treated, 51,897 tons; average tons per day, 161.70; mill heads, 32.73 ounces; mill tails, 4.46 ounces; ounces of silver recovered, 1.489,514.

Savage Mine.—Drifting, 1,621.5 feet; cross-cutting, 1,345.5 feet; raises, 300.5 feet; winzes, 67.5 feet; shafts, 85 feet; total footage, 3,420 feet; stoping. 10,791.5 tons broken.

Sorting mill tons treated, 17,888; average tons treated per day of ten hours, 57.33; cost per ton milled, \$0.469; cost per ounce recovered, \$0.0133. 49509—10

#### Nipissing Mines Company.

Calendar year 1912.

High Grade Mill.—The plant for the treatment of high grade ore ran successfully throughout the year, and treated 1,752 tons of Nipissing ore, averaging 2,212 ounces per ton; and 90 tons of custom ore. Bullion shipped amounted to 4,258,641 ounces.

A sampling plant was added and a blast furnace was installed in the refinery for the reduction of slags, flue dust, and precipitate. A new reverberatory furnace has also been built for the refining of the precipitate from the low grade mill, so that practically the entire silver product of the mine is now shipped as bullion over 997 fine.

Low Grade Mill.—The cyanide plant crected for the treatment of the low grade ores was completed in 1912, and is now in full operation. All the ore so far milled has come from the town side, being transported across the lake and to the top of the picking belt by an aerial tramway.

The first-class ore and the concentrate produced by the picking belt are sent to the high grade mill for treatment. The discard and tailing from the picking plant are transferred to the crushing department of the main mill.

Surface Prospecting.—No trenching was done during 1912; this gave way to surface prospecting by the hydraulic plant installed during the previous season. Pressure is obtained by a turbine pump situated on the shore of Cobalt lake. It throws 4,800 gallons of water per minute under a head of 415 feet at the pump, and is directly connected to a 650 H.P. high-speed motor.

The plant started operations on May 8 and ran without serious interruption until November 29—sixteen hours per day. The operation consists in removing the soil and boulders by a powerful jet of water, thereby plainly exposing the surface of the rock when any veins outcropping can be easily seen.

During the season, 33.2 acres of ground were cleared, the average depth of soil was 4.75 feet, a 3½" or 4" nozzle was used, the average pressure being 121 pounds at the nozzle. The area cleared had been trenched in previous years, but a great many additional small veins and stringers were exposed by the hydraulic operation.

#### British Columbia.

The chief sources of the silver production in this Province are the silver-lead ores of East and West Kootenay, supplemented by the silver contained in the gold-copper-silver ores of Rossland, Boundary, and Coast districts. The production in 1912, based on smelter recoveries, was 2,651,002 ounces, valued at \$1,612,737.

The leading silver producers among the silver-lead mines of the Province, in order of importance, are the Standard, Van Roi, Sullivan, Molly Gibson, and Rambler-Cariboo.

The Granby mines at Phoenix, on account of their large tonnage of copper ores, come fourth as silver producers, with the others retaining their relative positions.

The past year witnessed an increased production from the Slocan district, chiefly from Sandon and Silverton camps, with Ainsworth coming to the front. The newest promising camp is Hazelton, from which the opening of 1913 witnessed several shipments.

The following table is taken from the annual report of the Minister of Mines for British Columbia, 1912, and being a record of mine production the figures are somewhat higher than those showing production based on smelter recoveries:—

SILVER.—TABLE 3.

<sup>\*</sup> From the Minister of Mines Reports, British Columbia.

#### Yukon.

The figures of silver production of the Yukon, given in Table 2, represent the silver alloyed with the placer gold, together with a small amount from the lode mines of the district. On an average, about one ounce of silver is contained in each five ounces of crude bullion from the alluvial workings. In 1909, the production was 45,000 ounces of silver, all from the placer mines. In 1910 the placer production was 50,000 ounces, valued at \$26,743, and the lode production, 37,418 ounces, valued at \$20,013, or a total of 87,418 fine ounces, valued at \$46,756. In 1911 the placer production was 50,300 ounces, valued at \$26,812, and the lode production, 62,408 ounces, valued at \$33,266, a total of 112,708 fine ounces, with a value of \$60,078. In 1912 the placer production was 60,302 ounces, valued at \$36,685, and the lode production, 20,766 ounces, valued at \$12,633, a total of 81,068 ounces, with a valuation of \$49,318.

49509-101

## Exports.

The following table shows the statistics of silver contained in ore, matte, or other form, exported from Canada since 1886, as compiled from the reports of Trade and Navigation published by the Customs Department. The exports during 1912 were 34,911,922 ounces, valued at \$19,494,416, as against exports of 31,216,725 ounces, valued at \$15,807,366, in 1911.

### ZINC.

The production of zinc ore in Canada in 1912, as obtained by direct returns from the producers, was 6,415 tons, valued at \$215,149, the greater part being from British Columbia. The zinc content of these shipments was returned as 5,354,700 pounds, which, if valued at the average New York price of spelter during the year, would be worth \$371,377.

The ore shipped from British Columbia contains also a varying silver content, for which payment is made by the smelters, and without which, on account of the import duty to United States and the long rail haul, it would not, in many cases, pay to ship.

A small trial shipment of 10 tons of ore was made from Ontario for testing purposes.

The British Columbia shipments were heavy, as a result of the activity in Slocan mines and mills. This ore is exported for treatment to Kansas and Oklahoma smelters, and since the smelters demand over 30 per cent, the maximum rate of the United States customs tariff affects Canadian ores.

The present schedule of the tariff on zinc is as follows:-

Ores containing less than 10 per cent, free of duty.

Ores containing 10 per cent or more and less than 20 per cent, 4 cent per pound.

Ores containing 20 per cent or more and less than 25 per cent, ½ cent per pound.

Ores containing 25 per cent or more, 1 cent per pound.

All rates being based on the metallic contents of the zinc.

The proposed new tariff may make a change in the rate on zinc ores.

The United States smelters usually pay on a basis of 45 per cent zinc content. The base price varies with the price of spelter at St. Louis, and a stated amount is added or deducted for every unit of zinc in excess of, or less than, the base. The silver is settled for at the New York price, after making deductions for loss in treatment. Limits are frequently set which lead or iron contents may not exceed. Thus zinc shipments are subject to the following penalties:—

- (1) Freight, the long haul to the United States smelters.
- (2) Duty on zinc in ore or concentrates, 1 cent per pound on metallic zinc content.
- (3) Duty on lead contained in ore though not paid for by smelters, 1½ cents per pound on all lead contained.
- (4) Payments. Deduction of six ounces of silver per tou, 75 per cent of the balance paid for.

The payment on zine in ore is equivalent to about 633 per cent of zinc content, at final market price of spelter, in some cases.

During 1912 there were received at American smelting works, 7,190 tons of zinc ore from Canadian mines, containing 6,392,983 pounds of zinc, 199,955 ounces of silver, 33,812 pounds lead. A large part of this was not smelted during the year, but was stocked.

The imports of zine, taken as an index of consumption, show a fairly steady increase. The total imports of zine in blocks and pigs and spelter were, in 1880, some 744 tons; in 1889 they had risen to 1,427 tons, and remained fairly stationary until about 1899, in which year the imports were 1,213 tons. In the fiscal year ending March, 1909, they had risen to 4,610 tons, and for the calendar year 1911, the total imports were 7,534 tons, in addition to which there were 4,269 tons of zine white, and zine manufactures to the value of \$30,862.

For the calendar year 1912, the total imports were 10,897 tons, in addition to which there were 5,253 tons zinc white, zinc manufactures to the value of \$46,336; also zinc dust, 154 tons, valued at \$18,944; and sulphate and chloride of zinc, 471 tons, valued at \$29,104.

Statistics of the production and imports of zinc, and the average monthly prices of spelter on the New York and London markets for two years, are given in the accompanying tables.

## MISCELLANEOUS METALLIC MINERALS

#### ALUMINIUM.

No commercial ores of aluminium have as yet been found in Canada. Aluminium is, however, made in extensive works at Shawenegan Falls, Quebec, from bauxite ores imported from France, Germany, and the United States by the Northern Aluminium Company. A wire mill for the manufacture of aluminium wire and cables is also operated by the same firm.

There being but one firm engaged in the manufacture of aluminium, we are precluded from publishing statistics of production.

Imports of alumina which probably include bauxite and exports of aluminium are, however, published in the reports of the Department of Customs.

During the twelve months ending December 31, 1912, the imports of alumina were 22,400,600 pounds, or 11,200 tons, while the exports of aluminium in ingots, bars, etc., during the same period, were 18,285,700 pounds, or 9,143 tons, besides manufactures of aluminium, valued at \$10,898. The imported alumina was valued at 2 cents per pound, and the exported aluminium at 10.9 cents.

The imports of alumina and exports of aluminium during the past nine years are shown in tabular form, as follows:—

## Annual Imports of 'Alumina' and Exports of Aluminium.

Prices.—The price of aluminium, No. 1, ingots in New York during 1912 varied between the limits of 18½ and 27 cents per pound; during 1911 the price varied between 18½ and 22 cents per pound; while 20 to 22 cents per pound were paid during 1910.

In Europe, prices for aluminium for several years have been considerably lower than in the United States.

In 1909 the prices per pound at works in Europe are reported by the 'Metallgesellschaft' as having ranged from 13½ cents to 16 cents; in 1910, from 14 cents to 17¼ cents; and in 1911, from 11 to 13½ cents.

### ANTIMONY.

The production of antimony in Canada has been not only small but spasmodic.

In 1907 the production was 2,016 tons of antimony ore shipped, valued at \$65,000, and 63,850 pounds of refined antimony, valued at \$5,108.

In 1908 customs returns showed an export of 148 tons of antimony ore, valued at \$5,443.

In 1909, in addition to the shipment of 35 tons of concentrates, there were produced about 61,200 pounds of antimony metal, chiefly at the works of the Canadian Antimony Company, Limited, at Lake George, New Brunswick, a small recovery being also reported from the Consolidated Mining and Smelting Company's refinery at Trail, B.C.

The total production of antimony in 1910, as reported to this Branch, consisted of 364 tons of antimony concentrates, valued at \$13,906, shipped from West Gore, Nova Scotia.

The auriferous antimony property at West Gore, formerly operated by the Dominion Antimony Company, Limited, was taken over in July, 1909, by the West Gore Antimony Company.

The mines and works of the Canadian Antimony Company, Limited, at Lake George, New Brunswick, have not been in operation since 1909.

In British Columbia, some of the lead ores contain a small percentage of antimony—about one-third of one per cent, and some refined antimony was recovered at Trail in 1907 and 1909, the recovery being somewhat irregular.

No production is reported in 1912, the West Gore Antimony Company not operating their mill, being engaged part of the year retimbering their shaft.

#### COBALT.

The silver-cobalt-nickel-arsenides of Coleman and adjacent townships, more familiarly known as the Cobalt district, in the Province of Ontario, are now the principal sources of the world's production of cobalt.

With respect to the greater part of the ore shipped in which silver is the chief constituent of value, the purchasing smelters make no allowance for cobalt content, and the mine owners, therefore, receive nothing for the cobalt.

The recovery of this metal in Canada, so far, has been confined to the production of cobalt oxide and mixed cobalt and nickel oxides by the Coniagas Reduction Company, and the Deloro Mining and Reduction Company. The Dominion Refineries, Limited, at North Bay, also entered the field in 1912. According to direct returns, there were produced during 1912, 349,454 pounds of cobalt and nickel oxides, and 1.285,280 pounds of cobalt material and mixed oxides of cobalt and nickel, the total value of all these products being \$320,244.

No information is available as to the quantities recovered from ores shipped to smelters outside of Canada.

The following table shows the ore shipments, estimated cobalt content, and value received by the shippers for cobalt, as published by the Ontario Bureau of Mines:—

Year.	Ores shipped,	Estimated total cobalt content.	Per cent.	Value received by shippers for cobalt.
	Tons.	Tons.		\$
****	158	16	10.1	19,960

1910	26,653	852	3.2	170,890
1912				

The production of cobalt has so largely exceeded the demand as to cause a very great fall in the price.

The price of cobalt oxide (78.6 per cent cobalt) in New York, during 1907, remained uniform at \$2.50 per ton. In 1908 the price fell to \$1.45 in April, and \$1.40 in November. During the first three months of 1909, from \$1.45 to \$2.60 was quoted, after which the price again fell, quotations ranging from \$1.10 to \$1.75 until December. In the latter part of December there was a further falling off to prices ranging from 80 to 85 cents per pound.

During 1910 the price remained fairly constant at from 80 to 85 cents per pound, while in December, 1911, it fell to from 78 to 80 cents per pound.

With regard to present prices, the following quotation from the Weekly Report of the Department of Trade and Commerce, dated July 7, 1913, page 759, will be of interest:—

'Inquiries instituted in connexion with the recent application about the prospects of doing business in Europe in cobalt and nickel oxides and arsenic, indicate that such a considerable number of metal and chemical firms are interested in these products, that a memorandum is herewith included dealing with the current market conditions in these specialties which a leading firm in the trade has courteously supplied, and also authorized its publication for the benefit of Canadian producers likely to be interested.

'The European consumption of cobalt oxide is at present maintained almost entirely in the hands of certain interests working in conjunction with a syndicate composed of the principal European manufacturers of cobalt preparations. The selling price of this combination was, until recently, between 2s. 6d. and 2s. 9d. per pound, according to quantity, for black cobalt oxide guaranteed to contain not less than 70 per cent cobalt metal, and in other respects of good commercial quality. Within the last few weeks, however, a demand has been made to raise this price to a minimum of 3s. per pound. In view of the existence of a number of outside producers, it is considered unlikely that the syndicate will be able to maintain this advance.

'In addition to the black oxide of cobalt there is considerable outlet for the so-called "grey" or prepared cobalt oxide, containing approximately 76 per cent cobalt metal. This quality fetches a premium of 4d. to 6d. per pound on the black oxide.'

In the 'Statistique de l'Industrie Minerale en France et en Algerie' for 1911, the following statement is of interest: 'The production of cobalt ores, which was more than 2,360 metric tons in 1908, and then fell to 548 tons in 1909, was only 54 tons in 1910, and ceased completely in 1911.

'Thus New Caledonia, which for a long time enjoyed a veritable monopoly of cobalt ore, has been suddenly supplanted in these markets by Canada, as a result of the exploitation of the argentiferous-cobalt ores of the Cobalt district.'

In 1907 an Act was passed by the Ontario Legislature, authorizing the payment of bounties on certain nickel, cobalt, copper, and arsenic products, mined and refined in the Province. The Act and Amendment are quoted following:—

# An Act to Encourage the Refining of Metals in Ontario.

Whereas, it is desirable to encourage the refining of nickel, cobalt, copper and arsenic ores within the Province;

Therefore His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

1. This Act may be cited as 'The Metal Refining Bounty Act.'

2. The treasurer of the Province may, under the authority of such regulations as may from time to time be made in that behalf by the Lieutenant-Governor in Council, pay in each year to the refiners of the metals or metal compounds hereinafter specified, when refined in the Province from ores raised and mined in the Province, a bounty upon each pound of such metal or compound so refined as follows:—

Class 1.—On refined metallic nickel or on refined oxide of nickel, 6 cents per pound on the free metallic nickel or on the nickel contained in the nickel oxide; but nickel upon which a bounty has already been paid in one form of product shall not be entitled to any further bounty in any other form; and the amount to be paid as bounty on the nickel products herein mentioned is not to exceed in all \$60,000 in any one year.

Class 2.—On refined metallic cobalt or on refined oxide of cobalt, 6 cents per pound on the free metallic cobalt or on the cobalt contained in the oxide of cobalt; but cobalt upon which a bounty has already been paid in one form of product shall not be entitled to any further bounty in any other form; and the amount to be paid as bounty on the cobalt products herein mentioned is not to exceed in all \$30,000 in any one year.

Class 3.—On refined metallic copper or on refined sulphate of copper, 1½ cents per pound on the free metallic copper or on the copper contained in the sulphate of copper; or on any copper product carrying at least 95 per cent of metallic copper, one-half cent per pound; but copper upon which a bounty has already been paid in one form of product shall not be entitled to any further bounty in any other form; and the amount to be paid as bounty on the copper products herein mentioned is not to exceed in all \$60,000 in any one year.

Class 4.—On white arsenic, otherwise known as arsenious acid, produced from mispickel ores and not from ores carrying smaltite or niccolite or cobalite, one-half cent per pound; but the amount to be paid as bounty on the arsenic compound herein mentioned is not to exceed in all \$15,000 in any one year.

- (1) Provided, however, that if so much of any of the above-mentioned classes of refined products is refined in the Province in any one year that the amount hereby set apart in respect of the said class would be insufficient to pay the bounties herein provided therefor, then the bounty payable to the refiners of such class of refined products shall abate and be payable upon a pro rata basis so that not more than the maximum amount herein specified for any of the said classes shall be paid in respect of said class in any one year.
- (2) Provided, also, that the bounties herein provided for shall cease and determine with the payment of any sum or sums which shall have been earned during the period of five years from the passing of this Aet.
- (3) No person, firm or company shall be entitled to claim or receive any of the bounties in this Act provided for unless such person, firm or

company shall have been at all times prepared and ready and willing during the period for which the bounty is claimed, to smelt, treat and refine ores from which the same product as that on which the bounty is claimed can be produced, belonging to any other person, firm or company, at rate and on terms and conditions approved by the Lieutenant-Governor in Council, or shall have been ready to purchase such ores at rates approved by the Lieutenant-Governor in Council as current market rates.

# An Act to Amend the Act to Encourage the Refining of Metals in Ontario.

His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

1. Subsection 2 of section 2 of The Metal Refining Bounty Act is amended by striking out the word 'five' where the same appears in the last line of the said subsection, and substituting therefor the word 'ten.'

### MERCURY.

There has been no production of mercury since 1897. The small production reported in 1895 and 1897 was derived from the deposits at the western end of Kamloops lake, B.C. These deposits consist of quartz veins containing bookets of cinnabar. These veins are in a zone of decomposed volcanic rock of Tertiary age.

During 1911 and 1912 development work has been carried on by the Moreury Mines, Limited, at Sechart, Vancouver island. Some ore was taken out but has been piled on the dump for future treatment,

#### MOLYBDENUM.

Although there are numerous occurrences of molybdenite in Canada, of more or less undetermined value, there has been very little production of the mineral.

In 1902, about 6,500 pounds of molybdenum, valued at \$400, were reported as having been taken from a deposit in the township of Laxton, county of Victoria, by John Webber, of Toronto.

In 1903, Mr. A. W. Chisholm, of Kingston, reported the shipment to the United States, and elsewhere, of 85 tons of molybdenum ore, valued at \$1,275, culled from about 500 or 600 tons of rock taken from the east half of lot 5, concession XIV, Sheffield township, Addington county.

Some work was done during 1912 in different parts of Quebec province, but there was no production of the mineral.

According to 'The Mineral Industry,' published in New York: 'The market for molybdenum ores is very narrow. The price fluctuates widely, and is generally subject to special negotiations at each particular sale. American buyers require concentrates to contain 90 to 95 per cent molybdenite, for which they will pay \$400 to \$450 per ton. The principal purchasers in the United States are: Electrometallurgical Company of America, New York; Primos Chemical Company, Primos, Penn.; DeGolia and Atkins, San Francisco, Cal. In Germany, Friedrich Krupp, of Essen, is a large user of molybdenum.'

During the year 1911 a report on the molybdenum ores of Canada was issued by the Mines Branch.

162

<sup>&</sup>lt;sup>1</sup> No. 93. Report on the Molybdenum Ores of Canada, by T. L. Walker, Ph.D., Mines Branch, Department of Mines, Ottawa, 1911.

## PLATINUM AND PALLADIUM.

In past years the chief source of the platinum production in Canada was the placer gravels of British Columbia, principally in the Similkameen district. The nickel-copper ores of the Sudbury district also carry small quantities of the metals of the platinum group, and since 1902 considerable quantities of these metals have been recovered from the residues resulting from the treatment of the matter from Sudbury.

Since 1906 no record of the recovery of metals of the platinum group from the Sudbury District ores has been published, but the International Nickel Company have been good enough to inform us that the recovery of gold, silver, platinum, and palladium at their works in New Jersey for the six years ending December 31, 1912, was as follows:—

Year.	Gold.	Silver.	Platinum.	Palladium.
	Ozs.	Ozs,	Ozs.	Ozs.
1907	993 · 572	63,400°70	226·800	607:300
	5,238 · 181	139,329°29	172 316	382:287
908	2,113 669	63,138 · 66	546 · 627	1,270 598
	2,649 799	60,256 · 83	258 · 325	522 804
1910	2,203 052	70,954 38	665 552	753 · 363
	2,476 558	62,169 66	496 850	680 · 130
1912	15,674 831	459,249 52	2,366 470	4,216 482

In view, however, of the fact that other material has been treated in the Company's works in addition to the nickel-copper mattes from Copper Cliff, Ontario, it is impossible to state what proportion of the above recoveries was from Canadian sources, although it is, of course, safe to assume that part of these metals has been derived from the Sudbury District mattes.

An attempt has been made in the last few years to work the placer deposits of the Tulameen district of British Columbia, with a view to the recovery of platinum. In former times platinum was not recognized by the miners and in many cases was discarded as worthless. Several companies have been formed recently to operate in this district.

#### TIN.

Tin ores have not yet been found in sufficient quantities in Canada to be of economic importance.

The occurrence of tin ore has been reported from several localities, the most important, perhaps, being the discovery of cassiterite, near New Ross, Lanenburg county, Nova Scotia. This occurrence has not yet been found of economic value. It has been visited by several officers of the Geological Survey, and reports upon it may be found in the Summary Report of the Geological Survey Branch of the Department of Mines, for 1907, pages 77 and 80 to 83, and in the report for 1908, page 154.

In further reference to the New Ross occurrences, Mr. Faribault, in his summary report for 1910, states that: 'At New Ross, Lunenburg county, some distance east of the district surveyed last summer, two important veins, one bearing manganese and the other tin and copper, were opened last summer.

'A tin-bearing vein, also recently discovered by Ernest Turner, at Mill Road, four miles north of New Ross, has been prospected under the management of A. L. McCallum. It has been proved to a depth of 20 feet, and for a length of 250 feet, while the float has been traced half a mile towards the north. The vein is 24 inches wide, mostly made up of quartz, merging with granite at the sides, and carries at the middle a streak of rich ore, from 3 to 5 inches wide. Several assays of the ore made by Mr. McCallum have given from 10 to 30 per cent tin, and 8 per cent copper, present in the form of cassiterite and chalcopyrite, with association of tungsten-bearing zine minerals.'

In the Summary Report of the Geological Survey of Canada for 1911, page 13, will be found a note referring to the occurrence of tin associated with tungsten, on the southwest branch of the Miramichi river, New Brunswick,

The imports of tin and manufactures thereof into Canada are shown in the following table:—

166

# Imports of Tin and Tinware.

		Fiscal Year.	Value.	.160	iscal Year.	Value.

#### TUNGSTEN.

Scheelite was discovered in Halifax county, Nova Scotia, in 1908. Mr. Faribault, of the Geological Survey, visited this deposit again in 1909, and a preliminary report thereon will be found in the Summary Report of the Geological Survey for 1909, pages 228 to 234. During 1910 these deposits were developed by the Scheelite Mines, Limited, who have obtained very satisfactory results.

During 1912, the Scheelite Mines, Limited, continued development and prospecting work and operated their mill, making a shipment of 14 tons of tungsten concentrates—the first shipment from Nova Scotia—carrying 72 per cent tungstic acid.

In the Summary Report for 1910, Mr. Faribault refers to a discovery in Queens county, as follows:—

'A new discovery of tungsten ore in the form of scheelite has been made by A. N. Prest, at Middlefield, Queens county, near the Fifteen Mile Brook gold mine, and prospecting was started last fall in order to trace the float to the parent vein.'

The occurrence of wolframite has also been noted in association with molybdenite, by Dr. Walker, in New Brunswick, near the confluence of Burnt Hill brook and the southwest Miramichi. The property was tested by Mr. Freeze, of Doaktown, New Brunswick, and Mr. Matthew Lodge, of Moncton, who formed the Acadia Tungsten Mines Company. This Company has done a little development.

## NON-METALLIC PRODUCTS.

#### ABRASIVE MATERIALS.

The abrasives produced in Canada comprise corundum, the various sandstone abrasives, such as grindstones, pulpstones, whetstones, etc., and tripolite or infusorial earth.

#### CORUNDUM.

The total shipments of grain corundum from operating mills in 1912 were 3,919,525 pounds, valued at \$239,091, or an average price of 6.1 cents per pound, as compared with shipments of 2,943,150 pounds, valued at \$161,873, or an average of 5.5 cents per pound in 1911. Of the 1912 shipments, 126,900 pounds, or 3.2 per cent of the total, were sold for consumption in Canada, and 3,792,625 pounds, or 96.8 per cent, were sold for export.

The quantity of rock milled was 36,879 tons, from which 3,240,800 pounds were graded, showing a recovery of 4.4 per cent of corundum from the rock. In 1911, 41,795 tons of rock were milled with a recovery of 3,281,750 pounds, or 3.93 per cent, of grain corundum.

The annual production since 1880 is shown in Table 1 below.

(a) In addition to this amount which was milled in Canada, 267 tons of ore were mined and shipped to the United States for treatment there.

Corundum is found in Faraday, Dungannon, Monteagle, Carlow, Raglan, and adjacent townships, the operating mines being located in the last two. Mining operations have been in progress since 1900. In the earlier years of

the industry, the amount of grain corundum graded averaged about 10 per cent of the rock treated. In more recent years, however, a much lower grade of rock has been milled, the recovery of corundum during the past few years varying between 3.9 and 4.5 per cent.

The Manufacturers Corundum Company, Limited, is the only operator at present, working the Craig mine at Craigmont, Renfrew county, and the Burgess mines in Hastings county.

The treatment of the ore consists in concentration, magnetic separation of the iron, air separation of mica, and sizing. The magnetic sand is now being sold as a by-product, and is used in the manufacture of school blackboards.

The corundum finds a market in Canada, the United States, England, France, Germany, and Belgium. Descriptions of mines and mills will be found in the Annual Report of the Ontario Bureau of Mines, and in Memoir No. 6, Geological Survey Publications.<sup>1</sup>

#### GRINDSTONES, PULPSTONES, ETC.

The annual production of grindstones which are obtained in Nova Scotia and New Brunswick has remained practically constant during the past twenty years.

The total production, including pulpstones, etc., in 1912, was 4,412 tons, valued at \$52,090, as compared with 4,566 tons, valued at \$52,942, in 1911.

These abrasives are quarried from the Millstone Grit of the Carboniferous formation, which occupies a large portion of the surface of the eastern half of the Province of New Brunswick and the northern and northwestern parts of Nova Scotia.

The localities at which quarrying operations are chiefly carried on are at Lower Cove, and Quarry island, near Merigomish, in Nova Scotia, and in New Brunswick on Chalcur bay, and at Woodpoint and Rockport on the Bay of Fundy.

The grindstones are all shipped in finished condition, and are worth from \$10 to \$12 per ton.

About 125 tons of pulpstones, valued at \$4,000, were shipped in 1912 to Canadian pulp- and paper-mills. These stones weigh about 2½ tons each, and are usually made about 27" face by 54" diameter. The production of scythe stones was 64 gross, and about 45 tons of marble polishing grit were shipped.

Most of the pulpstones are made at Quarryville, New Brunswick, by the Miramichi Quarry Company. This quarry also produces an excellent building stone, which finds a market in Quebec, Montreal, and Toronto.

Statistics of the production of grindstones by Provinces since 1886 are given in Table 2.

The imports of grindstones into Canada, principally into the Provinces of Ontario and Quebec, reached a total value during the calendar year 1912 of \$112,020; the value of the other abrasives imported during the same period included: burrstones, 2,162, valued at \$1,409; emery, valued at \$46,616; manufactures of emery, \$130,571; pumice stone, \$21,310; sandpaper, \$189,782; iron sand for glass or granite polishing or for sawing stone, 379,619 pounds, valued at \$13,847; a total value of \$515,055.

In 1911 the value of grindstones imported was \$123,356, and the value of the other abrasives imported during the same period included: burrstones, valued at \$1,642; emery, \$46,274; manufactures of emery, \$104,170; pumice stone, \$18,779; sandpaper, \$164,474; iron sand for glass or granite polishing or for sawing stone, \$8,340; a total value of \$467,035.

#### ASBESTOS.

Asbestos is mined or quarried in Canada in the Province of Quebec only, from deposits in the Eastern Townships, in the districts of Black Lake, Thetford, East Broughton, and Danville. Other occurrences of the mineral have been noted and some shipments were at one time made from the township of Denholm, Ottawa county, north of the city of Ottawa.

The asbestos deposits and the asbestos industries have been described in a special report published by the Mines Branch.

For a number of years preceding 1911 the annual output of asbestos exceeded the sales, but during the past two years the sales have greatly increased and stocks held in producers hands have been materially reduced. Returns for the year 1912 show a total output of 102,759 tons, as compared with 96,302 tons in 1911, and 100,430 tons in 1910. The sales (not including asbestic) in 1912 were 111,561 tons, valued at \$3,117,572, or an average of \$27.95 per ton, as compared with sales of 101,393 tons, valued at \$2,922,062, or an average of \$28.82 per ton, in 1911, and 77,508 tons, valued at \$2,555,974, or an average of \$32.98 per ton, in 1910. Sales of asbestic in 1912 were 24,740 tons, valued at \$19,707, or an average of 80 cents per ton, and in 1911, 26,021 tons, valued at \$21,046, or an average of 81 cents per ton. Stocks of asbestos on hand December 31, 1912, were reported as 23,288 tons, valued at \$1,083,202, or an average of \$46.51 per ton, as compared with stocks of 34,567 tons, valued at \$1,509,101, or an average of \$43.65 per ton, on December 31, 1911, and stocks of 41,903 tons, valued at \$1,943,846, on December 31, 1910.

The average number of men employed in mines and mills during 1912 was 2,955, at a wage cost of \$1,401,653.

The total quantity of asbestos rock sent to mills during 1912 is reported as 1,630,743 tons, which, with a mill production of 98,010 tons, shows an average estimated recovery of 6.01 per cent.

In 1911, 1,484,691 tons of asbestos rock were sent to the mills, with a recovery of 91,237 tons of asbestos, or an average of 6.14 per cent.

Statistics showing the output, sales, and stocks on hand on December 31, by grades, are given for the past three years in the next following tables.

In the absence of a uniform classification of asbestos of different grades, the divisions here shown have been adopted on a valuation basis: crude No. 1 comprising material valued at \$200 and upwards, and crude No. 2 under \$200;

<sup>&</sup>quot;Clarysotile-Asbestos: Its Occurrence, Exploitation, Milling, and Uses," by Fritz Cirkel, Mines Branch, Dept. of Mines, Ottawa, 1910.

mill stock No. 1 includes stock valued at from \$30 to \$100; No. 2, from \$15 to \$30, and No. 3, under \$15.

Statistics of production given in Tables 2 and 3 represent sales or shipments.

Output, Sales, and Stocks of Asbestos in 1912.

The shipments of crude asbestos and mill stock since 1903 are separately shown in Table 2. The record indicates that during the past ten years there has been but little variation in the quantity shipped as crude, the average price of which, however, nearly doubled between 1903 and 1908.

The shipments of mill stock, on the other hand, have been increased from 27,005 tons in 1903 to 105,898 tons in 1912, the average price per ton during that period having varied between the limits of \$19.79 and \$29.84.

<sup>(</sup>a) Figures of export taken as production.

#### EXPORTS AND IMPORTS.

Supplying, as it does, the greater part of the world's demand, the Canadian output of asbestos finds a wide distribution.

Exports to Great Britain, United States, Germany, and other countries during the past seven calendar years, as compiled from the reports of the Customs Department, are shown in Table 4, and the total exports each year since 1892, in Table 5.

Attention has been called to the fact that these figures apparently do not accurately indicate the destination of exports; that Germany, for instance, is a much larger consumer of Canadian asbestos than is shown by these figures. This may possibly be explained by the fact that frequently raw materials of this kind are sold in bond to brokers or dealers in New York, and by them resold to consumers in other countries. The record, according to British Trade

returns, also shows a smaller import from Canada into the United Kingdom than the exports to Great Britain as shown in Canadian statistics. It is, therefore, possible that material shown as exported to Great Britain finds its ultimate destination elsewhere.

The exports in 1912 were reported as 88,008 tons, valued at \$2,349,353, or an average of \$26.69 per ton, and include: 9,387 tons, valued at \$208,464, exported to Great Britain; 69,222 tons, valued at \$1,871,770, to the United States: 1.155 tons, valued at \$43,898, to Germany; 4,738 tons, valued at \$119,714, to Belgium; 2,073 tons, valued at \$71,963, to France; and 1,433 tons, valued at \$33,544, to other countries.

Although the chief source for the raw material, Canada does not yet manufacture all the asbestos goods required for home consumption. There is, therefore, a considerable importation of asbestos goods under the import classifica-49509—12

tion, "Asbestos in any form other than crude, and all manufactures of," the duty being 25 per cent.

The total value of these imports during the calendar year 1912 was \$461,449, as against \$319,815 in 1911, \$230,489 in 1910, and \$196,742 in 1909.

The annual value of the imports during the fiscal year is shown in Table 6.

#### CHROMITE.

Chromic iron ores are found in Canada in the Coleraine and Black Lake districts of the Eastern Townships, Province of Quebec.

No productive mining operations have been undertaken during the past three years, but small shipments were made from stock during 1910 and 1911.

The companies chiefly interested in the deposits are:-

The Black Lake Asbestos and Chrome Co., Ltd., Black Lake, Que. The Dominion Chrome Co., Ltd., 86 Notre Dame street W., Montreal.

Statistics of production in past years are shown in Table 1. Imports of chrome into the United States from Canada in Table 2, and imports into the United States from all sources during 1911 and 1912 (fiscal years) in Table 3.

### COAL.

The production of coal in Canada in 1912 exceeded that of any previous year, the total production being reported as 14,512,829 short tons valued at \$36,019,044 and constituting nearly 27 per cent of the total value of the immeral production of Canada during the year. The production was obtained by about 244 operating companies employing an average of 27,581 men at a wage cost of \$20,784,843. Compared with 1911, in which year the production was 11,323,388 short tons valued at \$26,467,646, an increase is shown of 3,189,441 tons, or 28 per cent in quantity and \$9,551,398 or 36 per cent in total value.

The largest previous year's output was in 1910 when the production was 12,909,152 short tons valued at \$30,909,779, compared with which 1912 shows an increase of 1,603,677 tons or 12 per cent and \$5,109,265 or over 11.6 per cent in total value.

In contrast to 1911 there were no very serious interruptions to mining operations during 1912 with the exception of the labour troubles in the mines of the Canadian Collieries, Limited, on Vancouver island, during the latter part of the year, and on account of which the production in British Columbia was somewhat less than might otherwise have been expected.

The character of the coal mined in Canada is chiefly bituminous, although anthracite is obtained from one mine in Alberta and a considerable tonnage of lignite is mined in Alberta and Saskatchewan.

The term production in the tables and the text is used to represent the amount of coal actually sold or used by the producer as distinguished from the term output which is applied to the total coal extracted from the mine and which in some cases includes coal lost or unsaleable or coal carried into stock on hand at the end of the year.

Statistics of the production by provinces in 1912 are shown in Table 1 and of the production during 1909-10-11 in Table 2.

In Nova Scotia there was an increased production in 1912 of 779,465 tons or 11 per cent, over 1911. This Province produced nearly 54 per cent of the total in 1912 as against 62 per cent in 1911. The production in New Brunswick is quite small in proportion to the other provinces and amounted to only 44,780 tons in 1912, a decrease of nearly 20 per cent from 1911. In the west for the first time on record Alberta has the largest production, amounting to 3,240,577 tons, the production in British Columbia being 3,208,997 tons; but, as already stated, the latter Province would have had a higher production had

labour troubles not prevented a normal output at the mines of the Canadian Collieries, Limited. The production in Alberta is the highest recorded for that Province, while in British Columbia the greatest production was attained in 1910. Large decreases were shown in these Provinces in 1911 and correspondingly large increases in 1912 due to the abnormal conditions of miners out on strike and consequent cessation of work during a large part of 1911.

Total for Canada	(d	1,585,764	12.58	(i)	3,189,441	28.04		

The Province of Nova Scotia in 1912 produced nearly 54 per cent of the total Canadian production, British Columbia 22·1 per cent, Alberta 22·3 per cent, and Saskatchewan 1·5 per cent. The relative importance of the different provinces as coal producers for a number of years past is indicated in the next table, in which is shown the proportional contributions of each province to the total tonnage of coal produced in Canada. The coal-fields on the Atlantic seaboard still continue to produce more than half the total, although in 1910 the combined output of the western provinces was only a little less than 50 per cent of the total.

<sup>&</sup>lt;sup>a</sup> Alberta and Saskatchewan were established as provinces on September 1, 1905. For the purpose of comparison, the coal production during the years previous to that date has been separated according to the present boundaries of these Provinces.

Statistics of the distribution of the coal production of Canada in 1912 given in following tables show 10,572,365 tons reported as sold for consumption in Canada, 1,537,585 tons sold for export to the United States, and 314,410 tons, sold for export to other countries, or total sales of 12,424,360 tons; 870,885 tons were used by colliery operators in the manufacture of coke, in steel plants and in brick plants, while 1,217,584 tons were used in the operation of collieries and by workmen. Of the coal thus disposed of 32,673 tons were derived from

stock carried forward from 1911. Returns as to the amount of coal lost due to breakage, washing, etc., are very incomplete, but 167,291 tons were thus reported bringing the total 'output' of coal up to 14,647,447 tons.

Notwithstanding Canada's large coal resources the total domestic production (including that exported) was equivalent in 1912 to only about 54 per cent of the total consumption, there having been imported for home consumption during 1912, 14,595,810 tons. The total consumption of coal as shown in subsequent tables was 26,934,800 tons, or an average of about 3.644 tons per capita, while the production averaged about 1.957 tons per capita of population.

The principal coal-fields are located on the extreme east and in the far west, while the central Provinces of Ontario and Quebec, which contain the grent bulk of the population, are without coal deposits. Nova Scotia eoal is largely consumed within the Province and also finds a considerable market in Quebec. A little less than 9 per cent of the coal production of this Province was reported as sold for export in 1912. The market in Ontario is almost altogether supplied, and that of Quebec province to a lesser dagree, by coal imported from the nearer fields of the adjacent states of the United States. There are no anthracite coals in eastern Canada, and our requirements of this fuel have to be met entirely by imports from Pennsylvania. Manitoba is also supplied largely by importations from the United States.

The Saskatchewan production finds a local market within the Province and also in Manitoba.

Of the Alberta production about 91.8 per cent in 1912 was used by collieries or sold for consumption in Canada chiefly within the Province; 2.8 per cent was sold for export and 5.3 per cent used for making coke which was marketed in British Columbia and in the United States. British Columbia is the largest producer of coal for export. In 1912 about 52.4 per cent of the production in this Province was used by the collieries or sold for home consumpton; 33.7 per cent was sold for export, and 13.8 per cent used in making coke.

Total output	11,090,813	10,672,774	13,216,515

Statistics of the annual production of coal in Canada since 1785 are shown in Table 3. The total production from 1785 to 1912 has been 197,951,420 tons, of which 130,546,503 tons or 65.9 per cent are to be credited to Nova Scotia and 115,858, 438 tons or 23.2 per cent to British Columbia.

<sup>\*</sup> The total production for the years 1785 to 1873 is made up as follows:—

Nova Scotia (1785 to 1873) 8,053,670 tons of 2,000 pounds.

British Columbia (1836 to 1873) 537,480 2,000 2

## EXPORTS AND IMPORTS.

The statistics of exports and imports of coal as given in tables following have been compiled from the reports of the Department of Customs. The total exports during 1912 were 2,127,133 tons valued at \$5,821,593 or \$2.74 per ton, as compared with exports in 1911 of 1,500,639 tons valued at \$4,357,074 or \$2.90 per ton, and exports in 1910 of 2,377,049 tons valued at \$6,077,350 or \$2.56 per ton. The exports during 1911 were unusually low, on account of the strike conditions in Alberta and British Columbia during that year.

The total imports during 1912 were 14,595,810 tons valued at \$39,478,037, as compared with imports in 1911 of 14,558,892 tons valued at \$39,292,591 and imports in 1910 of 10,597,982 tons valued at \$28,450,001.

Statistics of exports during 1910-11-12, showing the principal countries of destination, are given in Table 4, and the annual exports since 1873 in Table 5.

COAL.—TABLE 4.

The United States is the principal market for Canadian coal exported, that country having taken about 75.4 per cent of the total exports in 1912. There were exported to Newfoundland 167,519 tons or 7.9 per cent of the total. Exports to other countries of 297,167 tons included 48,599 tons to Mexico and 37,985 tons to Australia. Smaller tonnages were also exported to Bermuda, 8t. Pierre, Cuba, Japan, and many other points.

Coal imported is subdivided into three classes: anthracite, including anthracite dust; bituminous round and run of mine; and bituminous slack such as will pass through a \(\frac{3}{7}\) screen. The imports of anthracite in 1912 were 4,184,017 tons valued at \(\frac{\$20,080,388}\$, an average of \(\frac{\$4.80}\$ per ton, showing an increase of 163,440 tons over the 1911 imports. The imports of bituminous round and run of mine in 1912 were 8,491,840 tons valued at \(\frac{\$16,846,727}\$, an average of \(\frac{\$1.98}\$ per ton, showing a decrease of 413,975 tons from the imports in 1911. The imports of bituminous slack in 1912 were 1,919,953 tons valued at \(\frac{\$2,550,922}\$ or an average of \(\frac{\$1.33}\$ per ton, showing an increase of 287,453 tons or 17 per cent over the 1911 imports.

(a). Duty, 33c. per ton. (b). Cold, antiffactic, and altiffactic coardinary duty free. (c). Duty 14c. per ton.

+ In the anthracite column the imports show a very considerable increase in 1888 over 1887, an increase of over 94 per cent, the falling off again in 1889 being quite as remarkable. The average values per ton for the three years 1887, 1888, and 1889, were \$4.02, \$2.47, and \$4.03 respectively. Although a duty of 50c. per ton on anthracite coal was removed. May 13, 1887, it is hardly thought this would account for the changes indicated, and unless some error may possibly have crept into the Trade and Navigation report, no explanation is available.

The total consumption of coal in Canada during 1912 deduced from the records of production, exports, and imports was 26,934,800 tons, as compared with 24,247,698 tons in 1911, an increase of 2,687,102 tons or 11 per cent. Of the total consumption during the past year 12,385,696 tons or 46 per cent was domestic coal and 14,549,104 imported coal.

The per capita consumption in 1912, based on an estimate of the population made by the Census Office, was approximately 3.596 tons, as compared with a per capita consumption of 3.384 tons in 1911.

#### Nova Scotia.

The production of coal in Nova Scotia in 1912 was reported as 7,783,888 tons, as compared with a production of 7,004,420 tons in 1911, showing an increase of 779,468 tons or 13 per cent. This is entirely bituminous coal and represents the output of 13 operating companies, one of which, the Dominion Coal Company, contributed about 64 per cent of the total.

Of the production in 1912, the quantity sold for consumption in Canada was 6,123,348 tons, while 482,597 tons were reported as sold for export to the United States and 193,274 tons sold for export to other countries; 731,315 tons were used for colliery consumption and by workmen and 253,354 tons were used by colliery operators in making coke and in steel making, etc. A considerable tonnage of coal sold for consumption in Canada was also used in making coke, the total tonnage used for coke making in the Province being 913,157 tons of domestic coal.

About 37 per cent only of the total sales were for consumption within the Province itself. Almost an equal amount, about 35 per cent, was sold for consumption in the Province of Quebec. The adjacent Provinces of New Brunswick and Prince Edward Island and the colony of Newfoundland took in 1912 about 15 per cent of the output.

There are five principal coal-fields in the Province, that affording the largest production being the Sydney coal-field in Cape Breton county. The production in Cape Breton county in 1912 was 5,968,922 tons or 76.6 per cent of the total; Pictou produced 785,547 tons or 11 per cent of the total, Cumberland county, 715,988 tons or 9 per cent of the total, and Inverness and other counties, 313,431 tons or 4 per cent of the total.

Annual statistics of the production of coal in Nova Scotia since 1872 are shown in Table 8, the figures being given in both long and short tons; the production by counties during the past six years is shown in Table 9. The record in each case covers the calendar year.

The statistics published by the Provincial Department of Mines cover the fiscal year ending September 30, and the details of colliery output during the year ending September 30, 1912, as published in the Provincial Mines Report, are shown below; while the colliery output during the last three fiscal years is shown in Table 10 and the distribution of coal sold during the same periods in Table 11.

#### New Brunswick.

The total shipments of coal from mines in this Province, as estimated by the Provincial Department of Works, was 42,780 tons, and adding 2,000 tons for colliery consumption and workmen, etc., the production is placed at 44,780 tons, which is 11,001 tons less than the production in 1911.

Mining operations are carried on in the Grand Lake coal-field, in Queens county, in which a comparatively large number of small mines or openings are intermittently operated. About 50 per cent of the total output was directly reported by the following operators: The Rothwell Coal Co., Limited, The Minto Coal Co., Limited, The Northfield Coal Co., Limited, all of Minto, and the Thompson Coal and Brick Co. of Beersville.

#### Saskatchewan.

The total production in 1912, as reported from 25 separate collieries, was 225,342 tons of lignite coal valued at \$368,135, an increase of 18,563 tons or 9 per cent over the 1911 production. Of the 1912 production 215,793 tons were sold for consumption in Canada and 9,546 tons used by the producers for colliery consumption, for workmen, and in brickmaking.

The output which has hitherto been obtained entirely from the Estevan and Souris fields in the southeastern portion of the Province is used mainly for domestic purposes within the Province and in Manitoba. During the past two years mining operations have been commenced in a district about 115 miles past of the Estevan field and 40 miles south of Moosejaw.

The principal operating mines of the Estevan field are the Western Dominion Collieries, Limited, and the Manitoba and Saskatchewan Coal Com-

pany. Amongst the other mines, the chief operators are the Hawkinson Mining Co., the Estevan Coal and Brick Co., the Maple Leaf Mines, Limited, the Excelsior Coal Mining Co., and the Great West Coal Company.

#### Alberta.

The coal production of Alberta has increased rapidly during the past few years and has in 1912 exceeded that of British Columbia, which until the past year has been the chief coal mining province of western Canada. Alberta has numerous small collicries, the total number operating in 1912 being about 182, and in addition 74 mines reported either no operations, or development only, nevertheless 91 per cent of the total production was, in the past year, derived from 34 collicries operated by 30 companies, each collicry having an output exceeding 10,000 tons. Nine of these collicries has each an output exceeding 100,000 tons.

The total production of marketable coal during the year was 3,240,577 tons valued at \$8,113,525 or an average of \$2.50 per ton. The coal production of this Province includes lignite, bituminous coal, and the only anthracite mined in Canada, the production of which in 1912 was 160,589 tons.

Of the total production in 1912, 2,772,374 tons were sold for home consumption in Canada and 93,126 tons for export; the producers used 204,259 tons for colliery consumption and for workmen, and 170,818 tons were used in making coke.

The production by collieries in 1912 and in 1911 is shown in tables following. The low production in 1911, it will be remembered, was due to the protracted

strike and closing down of all the large collieries in the southern part of the Province during that year.

The production in 1912 by 30 companies, each with an output exceeding 10,000 tons, was 2,961,056 tons. The aggregate production of all other collieries was 279,521 tons.

According to statistics published by the Coal Mines Branch of the Department of Public Works, Province of Alberta, the total output of coal in that Province in 1912, including a considerable tonnage of unmarketable slack, screening, etc., was 3,446,349 tons. The total sales are reported by the same authority as 2,879,489 tons; used in making coke, 170,818 tons; used under colliery boilers, 262,971 tons; added to stock, 22,002 tons; slack, including anthracite and lignite coals, 111,069 tons.

The total sales, as shown by returns furnished this Division, including sales to workmen, were 2,888,872 tons, which is slightly in excess of the record given above. There is a deficiency, however, of 82,084 tons in the quantity reported as colliery consumption and it is evident that a considerable tonuage of slack used under colliery boilers has not been included in some of the records sent to the Department of Mines.

The following tables show the total output of coal in Alberta during 1912, the output by districts and the labour employed according to the records compiled and published by Mr. John T. Stirling, Provincial Inspector of Mines.

### British Columbia.

The total production of coal in British Columbia in 1912 from 17 collieries operated by 12 companies was 3,208,997 tons valued at \$10,028,116, as compared with a production of 2,542,532 tons in 1911 and 3,330,745 tons in 1910. The actual colliery output was somewhat higher as a considerable tonnage is lost in washing at some of the Vancouver Island collieries. The production in 1911 was greatly restricted on account of the closing down of the Crowsnest collieries because of labour difficulties and the very large increase in 1912 merely shows a return to normal conditions of operation. The 1912 production, although slightly less than that of 1910, is, with the exception of that year, the largest that has been recorded for the Province, and would probably have been greater even than the 1910 production had it not been for the falling off in production at the mines of the Canadian Collieries Limited, because of strikes during the latter part of the year.

Of the total production in 1912, 1,410,014 tons or nearly 44 per cent were sold for consumption in Canada, 961,862 tons or 30 per cent were sold for export to the United States, and 121,136 tons or 3.8 per cent were sold for export to other countries. The quantity used by producers in making coke was 444,635 tons or nearly 14 per cent of the production and 271,320 tons or 8.4 per cent were used under colliery boilers and for workmen.

The total production of coal on Vancouver island in 1912 was 1,571,683 tons, a falling off of 217,847 tons, as compared with 1911 when the production was 1,789,530 tons. The mines of the Canadian Collieries (Dunsmuir) Limited, were operated with a reduced staff of workmen from September 16, 1912, to the end of the year, owing to differences that had arisen between the company and its employees. The production of the Crowsnest mines in 1912 was 1,413,714 tons compared with 499,580 tons in 1911, the mines of the Crowsnest Pass Coal Company and the Hosmer mines being in operation for three months only during the latter year. The production in the Nicola and Princeton valleys in 1912 was 223,660 tons, as compared with 253,421 tons in 1911, a decrease of 29,761 tons.

<sup>\*</sup>This production is obtained by adding 'Home Consumption' and 'Sold for Export,' †52,935 tons of this amount were exported as sales without the division into 'Home Consumption' and 'Sold for Export,' Two months only.

The following general summary of development in various coal mining fields of British Columbia is quoted from the Annual Report of Mr. W. F. Robertson, Provincial Mineralogist of the Province.

'In addition to the coal mines actually producing, there are a number of important fields which have not as yet reached the producing stage—some of these partly developed and equipped, and others only prospected.

That these fields contain a large reserve of coal there is absolutely no doubt, and many of them will be developed and producing as soon as the market demands it and the transportation facilities can be provided.

Near Princeton, in addition to the colliery of the Princeton Coal and Land Company, which shipped some 21,386 tons of very good lignitic coal, a new colliery has begun shipping—United Empire—making a start this year by shipping 500 tons.

In the same section the Columbia Coal and Coke Company has continued development all year with a force of seventy men, but has not as yet begun shipping.'

'In the Nicola valley the Pacific Coast Coal and Coke Company has continued development with a small force, and although not shipping, reports indicate that the development has been successful in proving seams of good coal.

'In the coalfield of the Peace River valley, although the seams are thin, the coal is of exceptionally good quality.

'The Groundhog coal field was visited by the writer during the summer, an account of which will be found on page 81 et seq. of this Report. The extent of the coalfield proved to be all that was claimed, but the quality of the seams as exposed in the openings seen in the southern end of the field was very disappointing. The field has only been tested in one part, and it seems quite probable that further prospecting will develop cleaner seams of coal; the number and thickness of the seams is all that could be desired.

'The coalfields on the Bulkley, Telkwa and Zymoetz rivers, near the line of Grand Trunk Pacific Railway east of Hazelton, have all been undergoing development, but it is as yet premature to say how important they may prove to be.

'On the southern end of Graham island, on Skidegate inlet, a colliery (the British Pacific) has been partly equipped, but so far the output has been unimportant.

'In the interior of Graham island, to the east of the coal-outcrops at Camps Robertson and Wilson, systematic boring has been in progress all year, but without demonstrating workable coal. It would appear that the coal-measures had been laid down on a very uneven floor of igneous rock, many of the bosses of which were higher than the depth of the coal-deposit, so that they are now

Annual Report of the Minister of Mines of British Columbia for the year ending December 31, 1942; p. 249.

found protruding through; it was on one of these bosses that the first boreholes happened to be put down. The work is to be continued this year in other spots.

'Drilling has been going on in the northern part of the island near Masset, but no word has been received of commercial coal-seams having been proved.

'But slight development has been done on the coal-area near Bear lake, in the Cariboo district.

'On Vancouver Island the coalfield on Quatsino sound has been undergoing development in a small way, with as yet no definite results.

'The large producing companies have all been quietly doing extensive development work—the Canadian Collieries, near Campbell river and south of Cumberland, and it is understood much of this has been satisfactory, but details are not available for publication.

'The Western Fuel Company has been engaged in opening a new shaft—which will develop a new and very extensive seam of coal. Two shafts, each 10 × 26 inside of timbers and 350 feet apart, are being sunk; no expense or trouble which would tend to increase the safety or economy of future work is being spared in opening up this new colliery—a policy for which the present management has already acquired an enviable reputation.

'The Pacific Coast Coal Mines, Limited, has continued the development of its Suguash Colliery, and has this year mined about 4,500 tons of coal.'

#### Yukon.

The principal coal mining companies operating in the Yukon district are the Five Finger Coal Company at Tantalus in the southern Yukon and the Northern Light, Power, and Coal Co., Limited, operating the Sourdough mine, Colliery No. 2, on Coal Creek, 40 miles northwest of Dawson. The total production in 1912 was 9,245 tons valued at \$44,958.

### COKE.

The statistics of coke production given herewith do not include coke made as a by-product in the manufacture of illuminating gas but are restricted to a record of the output of 'oven coke' produced chiefly for metallurgical purposes.

During 1912 the total quantity of coke made in Canadian coke oven plants from both domestic and imported coals was 1,406,028 tons. The quantity of coal used for this production was 2,053,807 tons, of which 1,428,509 tons were domestic coal and 525,298 tons were imported.

In 1911 the production was 954,388 tons of coke made from 1,409,844 tons of coal, of which 1,025,501 tons were domestic and 384,343 tons imported. In 1910 the production of coke was 901,269 tons derived from 1,373,793 tons of coal, of which 1,331,585 tons were domestic and 42,208 tons imported.

The quantity of coke sold or used by the producers in 1912 was 1,411,229 tons, as compared with 935,651 tons in 1911 and 902,715 tons in 1910.

The smaller quantity of Canadian coal used in 1911 was due to the coal miners' strike in southern Alberta and British Columbia during the greater part of that year, and the increased quantity of imported coal used to the construction of coke ovens in Ontario.

The consumption of coke in Canada is much in excess of the domestic production, there being a considerable importation of coke, chiefly into Ontario and Quebec, for use in the metallurgical industries.

The imports of coke during the calendar year 1912 were 628,174 tons and the exports 57,744 tons. Adding the production 1,411,229 tons to the net imports a consumption is shown of 1,981,659 tons. Similarly estimated the consumption in 1911 was 1,677,188 tons, and in 1910, 1,581,832 tons.

The production by provinces in 1911 and 1912 and the distribution of coke sold or used in 1912 are shown in the next two tables.

In Nova Scotia coke was made at Sydney, Sydney Mines, and Westville during 1912, but the ovens at Stellarton and Londonderry were idle. The output is used almost entirely in the manufacture of iron and steel. The Ontario

production was all from the ovens of the Lake Superior Corporation at Sault Ste. Marie, the blast furnaces and coking ovens of the Atikokan Iron Company at Port Arthur being idle throughout the year. In Alberta coke ovens were operated at Coleman, Lille, and Passburg, and in British Columbia at Fernie, Michel, and Hosmer, all in the Crowsnest district. The coke output of these Provinces is used chiefly by the copper and lead smelters, finding a market in the United States as well as in British Columbia.

The total number of ovens in active operation on December 31, 1912, was 1,905, while 948 were reported idle on the same date. In Nova Scotia the Dominion Iron and Steel Company at Sydney has 620 finished ovens all of the Otto Hoffman, by-product type. The by-products from these ovens include tar and ammonia. The tar is sold to the Dominion Tar and Chemical Company, whose works are contiguous to the coke oven plant, and this product is further treated for the manufacture of refined tar, pitch of various grades, benzole, creosote, carbolic acid, etc. The Nova Scotia Steel and Coal Company has 30 ovens of the Bauer type and 120 Bernard ovens; the latter are situated near the blast furnace and the surplus gas is used for the production of steam for the electric power plant. The surplus gas from the Bauer ovens is used in generating steam for general colliery use. The other ovens in this Province number 178 and are all of the Beehive type.

The Atikokan Iron Co., Limited., has 100 Beehive ovens at Port Arthur. Ont., and the Algoma Steel Company 110 Koppers by-product regenerative ovens at Sault Ste. Marie.

In Alberta the West Canadian Collieries, Limited, at Lille, has 50 ovens of the Bernard or Belgian type. The ovens of the International Coal and Coke Company at Coleman, 216 in number, are of the ordinary Beehive type, while the Leitch Collieries, Limited, have erected at Passburg 191 Mitchell rectangular ovens.

There are 1,420 beehive ovens in the Crowsnest district of British Columbia and 150 on Vancouver island.

The production of by-products from coke ovens in 1912 at Sydney and Sault Ste. Marie included 8,428,896 gallons of tar, and ammonia liquor containing 11,289 tons of sulphate of ammonia. In 1911 the production was 6,646,155 gallons of tar, and ammonia liquor containing 7,124 tons of sulphate of ammonia. Production in 1910 was: tar 3,963,591 gallons, sulphate of ammonia 3,491 tons, and in 1909, tar 4,016,824 gallons, and sulphate of ammonia 3,351 tons.

Statistics of exports and imports of coke as published by the Customs Department are shown in Tables 3 and 4 following.

The exports of coke during the calendar year 1912 were 57,744 tons, as against exports of only 9,852 tons in 1911 and 57,971 tons in 1910. These exports are all from British Cclumbia and Alberta. The imports during the calendar year 1912 were 628,174 tons, valued at \$1,702,856, as against imports

of 751,389 tons, valued at \$1,843,248, in 1911, and 737,088 tons, valued at \$1,908,725, in 1910.

The imports shown in Table 4 cover the fiscal year.

### FELDSPAR.

The total shipments of feldspar in 1912 were reported as 13,733 tons, valued at \$30,916, or an average of \$2.25 per ton, as compared with shipments in 1911 of 17,723 tons, valued at \$51,939, or an average of \$2.93 per ton.

The shipping firms were:-

The Kingston Feldspar and Mining Co., Kingston, Ont. Mines at Verona, Ont.

The Dominion Feldspar Co., Ltd., 425 Roxton Road, Toronto, Ont. Mines near Bobs lake, Frontenac county.

The Dominion Improvement and Development Co., Perth, Ont.

Messrs. O'Brien and Fowler, Hope Building, Ottawa. Mines at Villeneuve, Que.

The greater part of the shipments are exported to the United States; the exports of feldspar in 1912 being reported as 12,779 tons, valued at \$44,114, or an average value of \$3.45 per ton.

Almost the entire production of Canadian feldspar is derived from the Province of Ontario, the principal mines being located in the county of Frontenac, about 20 miles north of the town of Kingston on the St. Lawrence river. A few small deposits, also, have been worked in the Parry Sound district, in the vicinity of the Muskoka lakes. Formerly, feldspar was mined to some extent also in the Province of Quebec, the deposits being located in Ottawa county. No development of these properties has taken place during recent years, the distance from the United States factories rendering mining unprofitable. One mine in this region yields a remarkably pure white feldspar, which is in demand for the manufacture of artificial teeth. During 1912 some development was undertaken on feldspar deposits at Manikuagan bay on the north shore of the gulf of St. Lawrence.

Statistics of the production and experts of feldspar are shown in the following table:—

### GRAPHITE.

The total shipments of graphite in 1912 were reported as 2,060 tons, valued at \$117,122, and included 210 tons of crude graphite, valued at \$1,365, and 1,850 tons of refined graphite, valued at \$115,757, or an average of \$62.57 per ton.

In 1911 the total shipments were 1,269 tons of refined or milled graphite, valued at \$69,576, or an average of \$54.83 per ton.

In 1910 the total shipments of graphite were 1,392 tons, valued at \$74,087. comprising 245 tons of crude graphite, valued at \$2,450, and 1,147 tons of refined graphite, valued at \$71,637, an average of \$62.46 per ton.

Statistics of the annual production since 1886 are shown in Table 1.

			1912	2,060	117,12

<sup>\*</sup> Exports.

The graphite shipments in 1912 comprised 604 tons, valued at \$50,680, from mills in the Buckingham district, Province of Quebec, and 1,456 tons, valued at \$66,442, from mines and mills at Calabogie, Port Elmsley, and Wilberforce, Ontario.

The total value of the exports of graphite in 1912 was \$129,683, being classified as crude ore and concentrates, and manufactures of plumbago. The ore and concentrates exported in 1912 are given as 1,654 tons, valued at \$70,763, and manufactures of plumbago, valued at \$58,920. Of the ore and concentrates exported, 59 tons, valued at \$4,984, were reported as shipped to Great Britain; 1,550 tons, valued at \$62,680, to the United States; and 45 tons, valued at \$3,099, to other countries.

The manufactures of plumbago exported included \$3,932 to Great Britain, \$46,796 to the United States, and \$8,192 to other countries.

Statistics of the imports of graphite into Canada given in Table 3, show an importation, principally of manufactured graphite products, to a value of \$130,381 during the fiscal year 1912, and a valuation of \$111,869 during the fiscal year 1911.

The imports of graphite during the calendar year 1912 were valued at \$155,484, and comprised: plumbago, not ground, \$7,249; black lead, \$9,587; plumbago, ground, and manufactures, \$56,324; and crucibles of clay or plumbago, \$82,324.

The imports of graphite during the calendar year 1911 were valued at \$112,946, and comprised: plumbago, not ground, \$4,940; black lead, \$14,172; plumbago, ground, and manufactures, \$37,042; and crucibles of clay or plumbago, \$56,814.

### ARTIFICIAL GRAPHITE.

The manufacture of artificial graphite in electric furnaces has been carried on for some years at Niagara Falls, Ontario, by the International Atcheson Graphite Company. The production has been as follows:—

		Pounds,
1906	 	445,047
1907	 	407,779
1912	 	2,302,625
49509		

### GYPSUM.

Gypsum has been extensively quarried or mined for many years in the Provinces of Nova Scotia and New Brunswick and, to a lesser extent, in the Province of Ontario. During the past twelve years the gypsum deposits north of Lake St. Martin, Manitoba, have been operated with a growing annual production. The existence of several gypsum deposits in British Columbia has been known for some years, and in 1911 some development work was done and the first shipments made.

The total shipments of gypsum products in 1912, including crude, ground, and calcined gypsum, were 578,458 tons, valued at \$1,324,620, as compared with 518,383 tons, valued at \$993,394, in 1911.

The total quantity of crude gypsum mined in 1912 was 549,856 tons, as compared with 515,979 tons in 1911. The quantity calcined in 1912 was reported as 133,392 tons, compared with 76,718 tons in 1911. The total shipments in 1912 included: 453,577 tons of crude gypsum, valued at \$525,345, or an average value of \$1.16 per ton; 15,487 tons of ground gypsum, valued at \$29,244, or an average value of \$1.89; and 109,394 tons of calcined gypsum, valued at \$770,031, or an average value of \$7.04 per ton. The total shipments in 1911 included 449,823 tons of crude gypsum, valued at \$481,077, or an average value of \$1.07 per ton; 7,149 tons of ground gypsum, valued at \$23,125, or an average value of \$3.23 per ton; and 61,411 tons of calcined gypsum, valued at \$489,192, or an average value of \$7.97 per ton.

The total quantity of gypsum mined and the total quantity calcined during the past eight years are shown hercunder.

Gypsum Mined and Gypsum Calcined.

Year.	Total gypsum mined.	Gypsun calcined	
	Tons.	Tons.	
905	443,569	26,855	
906	492,759	28,831	
907	489,962	34,750	
908	375,444	48,727	
909	493,086	63,670	
910	548,019	69,889	
911	515,979	76,718	
912	549,856	133,302	

A very large part of the gypsum mined is shipped in the lump form, as quarried, to calcining mills in the United States. From 8,000 to 15,000 tons are ground for various uses, while the balance, nearly 24 per cent in 1912, is

calcined in Canada for the manufacture of wall plaster, plaster of Paris, and other gypsum products. Crude gypsum is also used to a considerable extent in the manufacture of Portland cement.

Detailed statistics of the production and sales of crude, crude ground, and calcined gypsum during the past eight years are shown in Table 1, while the total annual sales of gypsum products since 1886 are shown in Table 2, and the sales by provinces in Table 3.

### EXPORTS AND IMPORTS.

Statistics of exports and imports of gypsum, as compiled from the reports of Trade and Navigation, are shown in Tables 4, 5, and 6. The exports of gypsum during the calendar year 1912 were 364,643 tons, valued at \$423,208, or an average of \$1.16 per ton, as compared with exports of 362,102 tons, valued at \$425,161, or an average value of \$1.17 per ton, in 1911.

There was also an export of ground gypsum in 1912, valued at \$6,495, as compared with an export valued at \$4,429 in 1911. The exports of crude gypsum since 1874 are shown in Table 4, and of ground gypsum since 1890, in Table 5.

The imports during the calendar year 1912 totalled 43,071 tons, valued at \$268,103, and included: crude gypsum, 3,503 tons, valued at \$16,254, or \$4.64 per ton; ground gypsum, 7,072 tons, valued at \$19,651, or \$2.78 per ton; and plaster of Paris, 32,496 tons, valued at \$232,198, or \$7.15 per ton.

The imports during the calendar year 1911 totalled 32,234 tons, valued at \$205,782, and included: crude gypsum, 2,035 tons, valued at \$11,792, or 5.79 per ton; ground gypsum, 1,681 tons, valued at \$3,619, or \$2.15 per ton; and plaster of Paris, 28,518 tons, valued at \$190,371, or \$6.68 per ton. The record given in Table 6 covers the fiscal year.

The imports of gypsum previous to 1905 were comparatively small; since that year, however, imports, particularly of plaster of Paris, have increased considerably. During the past seven years the imports of plaster of Paris have increased from 6,000 tons to over 32,000 tons per annum, whereas formerly the imports ranged from 150 to 720 tons annually. The imports classed as "crude" and "ground" have varied considerably both in quantity and particularly also in grade of product, judging by the differences in average values.

Crude gypsum, duty free. Ground gypsum, duty 15 per cent. Plaster of Paris, duty 12 c. per 100 lbs.

The Province of Nova Scotia is the largest producer of gypsum. In both this Province and New Brunswick the deposits are extensive, and the facilities for water shipment to United States ports are unexcelled. The total quantity of gypsum mined in Nova Scotia in 1912 was 330,422 tons, as compared with 337,605 tons in 1911, and 438,131 tons in 1910. Of the total in 1912 about 85 per cent was mined from quarries in Hants county, at Windsor, Walton, Cheverie, Noel, etc., the balance being quarried at St. Ann, McKinnon Harbour, Victoria county, and Cheticamp, Inverness county. The greater part of the gypsum ground was shipped crude, chiefly to the United States. Two calcining mills were operated in the Province, one at Windsor, the other at Eastern Harbour, Cape Breton. The total shipments of calcined gypsum were 10,123 tons, as against 14,272 tons in 1911.

In New Brunswick the principal operating quarries are located at Hillsborough, some production being also made from the Tobique River deposits at Plaster Rock, in Victoria county. The total crude gypsum mined in the Province in 1912 was 82,348 tons, as against 92,446 tons in 1911, and 97,867 tons in 1910. About 80 per cent of the output was shipped crude, either in lump or ground, and the balance calcined, the calcined product finding a market throughout Canada.

In Ontario, 57,096 tons were reported as having been mined during 1912, as compared with 32,148 tons in 1911, and 12,021 tons in 1910. The total sales in 1912, including crude, ground, and calcined gypsum were 53,119 tons, valued at \$176,056. The sales included a quantity of alabastine manufactured by one firm, and valued at about \$50 per ton.

The production of gypsum in Manitoba has continued to increase steadily each year, and in 1912 the value of the shipments was second only to those of Nova Scotia. Practically all of the gypsum mined in this Province is calcined in mills situated at Winnipeg. The total quantity of gypsum mined in 1912 was 80,000 tons, as compared with 53,000 tons in 1911, 25,000 tons in 1910, and 22,000 tons in 1909. The shipments in 1912 were 66,500 tons, chiefly calcined gypsum, valued at \$481,250, as compared with 43,000 tons, valued at \$372,000, in 1911, and 19,500 tons, valued at \$195,000, in 1910.

There was no production of gypsum from British Columbia deposits during 1912.

### MANGANESE.

The manganese industry was at one time of considerable magnitude in the Provinces of Nova Scotia and New Brunswick, particularly during the decade between 1880 and 1890, the annual value of shipments ranging from \$30,000 to nearly \$50,000.

During the past two years the only production reported was that of the Nova Scotia Manganese Company at their mine at New Ross, Nova Scotia. This Company began operations in 1910, and during 1911 and 1912 was engaged in the development of the mine and the construction of a mill. Shipments in 1912 were reported as 75 tons of high grade pyrolusite, valued at \$1,875, and in 1911, 5½ tons, valued at \$300. During the past year operations were confined largely to surface work, in building and equipping a granulating mill and a concentrating mill, and in building 10 miles of road.

Pyrolusite or manganese peroxide is used as an oxidizer in the manufacture of chlorine, bromine, and oxygen, and of potassium ferromanganate; as a drier in paints and varnishes, as a decolorizer of glass, and in the manufacture of the dry and the Leclanche cells. As a colouring material, manganese is used in colouring glass, bricks, and pottery. Several manganese salts are used in drying cloth and as paints.

Statistics of the annual production of manganese ore are shown in Table 1, and of exports in Table 2.

The annual imports of oxide of manganese are shown in Table 3.

The exports in 1912 are reported as 10 tons, valued at \$300, as compared with exports in 1911 of 4 tons, valued at \$225. The imports of manganese oxide during the calendar year 1912 were 2,512,610 pounds, or 1,256 tons, valued at \$27,707, an average of \$22.05 per ton, as compared with imports in 1911 of 1,924,520 pounds, or 962 tons, valued at \$22,612, or an average of \$23.50 per ton.

### MICA.

According to returns furnished by the producers, the total production of mica in 1912 was 588 tons, valued at \$143,976, and included 196 tons, valued at \$81,044, from the Province of Quebec, and 384 tons, valued at \$62,932, from Ontario; the average value per ton of the Quebec shipments being \$413.48, and of the Ontario shipments, \$163.89.

The total production in 1911 was reported as 590 tons, valued at \$128,677, and included 217 tons, valued at \$69,465, or an average value per ton of \$320.12, in the Province of Quebec, and 373 tons, valued at \$59,212, or an average value per ton of \$158.75, from Ontario.

These statistics represent, as far as can be ascertained, the quantities and values of mica shipped from the mines. Much of this mica is shipped to trimming shops in Ottawa, Hull, Kingston, and other centres, where it is prepared for the market and the value considerably increased, thus, the mica is exported at a considerably higher value than that reported as production.

The exports in 1912 were reported as 448 tons, valued at \$334,054, as compared with exports in 1911 of 347 tons, valued at \$242,548.

Phlogopite, or amber mica, is the kind chiefly found and mined, although muscovite, or white mica, is also produced in small quantities.

The mica deposits of Canada have been the subject of a special monograph recently published by the Mines Branch.

Mica is mined in Canada in the Provinces of Quebec and Ontario. In Quebec the deposits being worked are situated chiefly in the region to the north of the city of Ottawa, in the townships of Hull, Wakefield, Buckingham, Portland, and Templeton. The Ontario deposits being worked are included in an area lying directly east of the Kingston and Pembroke railway, and are located chiefly in the townships of North Burgess and South Sherbrooke in Lanark county, South Burgess in Leeds county, and in Bedford and Loughborough in Frontenac county. Some considerable development has also been done on deposits in British Columbia, particularly at Big Bend on the Columbia river, north of Donald, B.C.

These latter deposits, however, are not as yet provided with transportation facilities and consequently have not yet made any production.

### MINERAL PIGMENTS.

Under this heading is included a record of the production of ochres and barytes.

#### OCHRES.

The total production of others and iron oxide in 1912 was 7,654 tons, valued at \$32,410, as compared with a total production in 1911 of 3,622 tons, valued at \$28,333. The 1912 production included 2,054 tons of others, valued at \$24,010, or an average of about \$11.69 per ton, used for paint manufacture; and 5,600 tons, valued at \$8,400, shipped to gas works; while the 1911 production included 1,622 tons, valued at \$24,333, or an average of about \$15 per ton, used for paint manufacture, and 2,000 tons, valued at \$4,000, shipped for use in gas works.

The other or oxide used for the manufacture of paints is calcined and ground at the place of production, while that used for the purification of illuminating gas is shipped crude to gas companies.

Statistics of production since 1886 are shown in Table 1.

MINERAL PIGMENTS.-TABLE 1.

[898	2,226	17,450	1912	7,654	32,410
[899]	3,919	20,000			

The working of ochre deposits in Canada has been chiefly confined to those deposits found between Champlain and Three Rivers in the Province of Quebec, a short distance from the shore of the St. Lawrence river. In 1912, however, there was an additional production from St. Joseph de Nicolet in this Province.

In Ontario, small quantities of other have occasionally been obtained from a deposit near Campbellville, but no production was reported from this source in 1912.

Following is a list of firms mining ochres:-

The Canada Paint Company, Ltd., Montreal, Que.
The Champlain Oxide Company, Three Rivers, Que.
Thos. H. Argall, Three Rivers, Que.
François Ouelette, St. Joseph de Nicolet, Que.
Ontario Mineral Paint Company, Campbellville, Ont.

The exports of iron oxides, or mineral pigments, in 1912 are reported as 3,016 tons, valued at \$34,513, as against 2,000 tons, valued at \$27,070, in 1913. The imports of pigments during the calendar year 1912 were: ochres and ochrey earth, raw siennas, 1,737 tons, valued at \$40,165; oxides, dry fillers, fireproof umbers, and burnt siennas, 762 tons, valued at \$29,456, or a total value of \$69,621. During 1911 the imports of the above classes were respectively valued at \$32,032, and \$21,060, or a total of \$53,092.

#### BARYTES.

The only barytes deposits worked in Canada during 1912 were those at Lake Ainslie, C.B., operated by Barytes, Limited, the shipments of ground barytes being reported as 464 tons, valued at \$5,104.

Statistics of production since 1885 are shown in Table 4, and imports in Table 5. Statistics of imports of barytes have not been shown separately by the Customs Department since 1890, but the imports of blanc fixe (artificial sulphate of barium), and satin white during the twelve months ending March, 1911, amounted to 1,212 tons, valued at \$26,797, and during the twelve months ending March, 1912, 1,923 tons, valued at \$29,545.

### WINERAL WATER.

The statistics of production given herewith represent, as usual, as closely as can be obtained, the value of mineral water shipped from mineral springs in bottles, barrels, or other containers, and do not include any estimate for the value of mineral water used at the spring for drinking or bathing purposes, nor are the natural pure spring waters included, of which a considerable quantity is sold in bottled form.

The value of the production in 1912 was \$173,462, as compared with \$223,758 in 1911, and \$199,563 in 1910.

The imports of mineral and aerated waters during the calendar year 1912 were valued at \$273,698, as against a value of \$229,367 in 1911, and \$202,306 in 1910.

Statistics of production and imports are shown in tables following:-

### NATURAL GAS.

The total value of the production of natural gas in Canada in 1912 was, according to returns received, \$2,362,700, as compared with a value of \$1,907,678 in 1911, and \$1,346,471 in 1910.

The quantity of gas produced in 1912 was about 15,286,803 M feet, as compared with 11,644,000 M feet in 1911, and 8,000,000 M feet in 1910.

The value of the production in Ontario in 1912 was returned as \$2,036,245; Alberta, \$289,906; and New Brunswick, \$36,549. In 1911 the Ontario production was valued at \$1,807,513, and that in Alberta, \$110,165.

The value of the gas, as reported by the producers, varies from 5 cents to 20 cents per M feet, but these prices do not represent what the consumer has to pay. In some cases the producer also owns the distribution pipe line and receives the full price paid by the consumer. In other cases the producer may sell to a pipe line company who either sells directly to consumers or may in turn re-sell to other pipe line companies for retail distribution; in such cases as these the producer only receives a fraction of the amount paid by the consumer, but he is saved the expense of distribution. The statistics given herewith represent, as far as possible, the value received by the producer or owner of the gas wells, whether such producer be the owner of the distribution line

Statistics of the production of natural gas in 1912, and of the annual production since 1892, are shown in the tables following:-

Returns received showed 1,532 producing wells in Canada, of which 264 were completed during the year. Seventy-two non-producing wells were also drilled during 1912, while 26 others were not completed at the end of the year.

In New Brunswick, the Maritime Oil Fields has now 19 producing wells in Albert county, and during 1912 gas was delivered to the Moneton Tramways Electricity and Gas Co., Ltd., for distribution in Moneton and Hillsborough.

Since beginning operations this Company has put down 25 wells, which show a total daily capacity of nearly sixty million cubic feet of gas.

Returns received from Ontario natural gas producers showed 1,478 producing wells in that Province at the close of 1912, of which 247 were completed during the year. Sixty-seven non-producing wells were also drilled, while 16 others were not completed at the end of the year.

In this Province the three principal producing fields are known as the Welland county, the Haldimand-Norfolk, and the Essex-Kent. The gas is used for lighting, heating, and manufacturing quite generally throughout the district in which it is available. Formerly, considerable quantities of gas were exported to Detroit and Buffalo, adjacent respectively to the Essex and Welland fields, but this export has now ceased. Under the provisions of Chapter 16, 6-7 Edward VII, entitled, "An Act to regulate the exportation of electric power and certain liquids and gases," assented to April 27, 1907, the export of natural gas is prohibited except under special license issued by the Governor in Council

In order to conserve the supply of natural gas, and as far as possible prevent its waste, the Ontario Legislature, in 1908, passed an "Act to prevent the wasting of natural gas and to provide for the plugging of all abandoned wells" (Edward VII, Chapter 47), by which power was conferred upon inspectors appointed under the Act, to enforce the stopping of waste. The Supplementary Revenue Act, 1907 (Ontario Statutes), also contained provisions which have been even more effective than those of the first-mentioned Act, and the enforcement of these laws has, according to the Bureau of Mines, reduced the waste of gas to a minimum.

Gas is supplied in over sixty different towns and villages, as well as generally to consumers in a number of townships.

In Alberta, the completion of the pipe line from Bow Island to Lethbridge and Calgary and intermediate points has resulted in a large increase in the utilization of natural gas, the total production in 1912 being reported as approximately 2,583 million cubic feet, valued at \$289,906. In 1911, the production was approximately 780 million feet, valued at \$110,165.

The production of gas in the Province has been obtained altogether from the two fields known as the Medicine Hat field, which has been producing since 1891, and the Bow Island district, the gas from which was commercially utilized for the first time in 1912. There were thirty-five producing wells at the close of the year, of which fifteen had been drilled during 1912, while six wells were in process of drilling at December 31.

In a summary report' for the Mines Branch, Mr. F. S. Clapp states that -

'Gas is sold for domestic consumption in the city of Medicine Hat for fifteen cents per 1,000 cubic feet, and for manufacturing purposes at five cents per 1,000 cubic feet. The city has, however, made a number of contracts for supplying gas to manufacturing plants free of cost for a five-year period. This appears to be a very short-sighted policy, in view of what is now known regarding the length of life of gas producing territory when drawn upon freely. Moreover, the value of natural gas as a fuel is too great to justify its waste by being given away. The rates for natural gas in the cities of Calgary, High River, Lethbridge, Macleod, and other towns situated on the Western Canada pipe line, are fixed at twenty cents per 1,000 for manufacturing and thirty-five cents for domestic purposes.'

Natural gas rights in Manitoba, Saskatchewan, Alberta, the North West Territories, the Yukon, etc., are the property of the Crown, and their disposal is now subject to the regulations approved by Order in Council dated the 11th day of March, 1910.

These regulations provide for a rental of 25 cents an acre for the first year and 50 cents an acre each subsequent year, lease to be for twenty-one years, renewable on conditions, and no applicant to be allowed to lease the gas rights under an area of more than 1,920 acres.

### PEAT.

During 1912 operations for the production of peat fuel were carried on at three different bogs, and consisted chiefly in experimental and development work.

The operating firms and bogs were:-

Peat Industries, Ltd., operating a bog at Ste. Brigide, near Farnham, Que. J. M. Shuttleworth, operating a bog at Alfred, Ont.

The Dorchester Peat Fuel Co., operating a bog at Dorchester, near London, Ont.

The total shipments of peat fuel were reported as 700 tons, valued at \$2,900, as compared with shipments in 1911 of 1,463 tons, valued at \$3,817, and 841 tons, valued at \$2,604, in 1910.

The annual production of peat during the past thirteen years is shown below:-

### Annual Production of Peat.

Calendar Year.	Tons.	Value.	Calendar Year.	Tons.	Value.
1900, 1901, 1902, 1903, 1904, 1905,	400 220 475 1,100 800 80 474	\$1,200 600 1,663 3,300 2,400 260 1,422	1907. 1908. 1009. 1910. 1911. 1912	50 60 841 1,463 700	200 180 240 2,604 3,817 2,900

<sup>&</sup>lt;sup>1</sup> Results of the testing of this peat are shown in the 'Report on the Utilization of Peat Fuel for the Production of Power' by B. F. Haanel, B. Sc., Mines Branch publication, No. 154.

A number of publications on peat issued by the Mines Branch are out of print, but the following are still available:—

Report No. 30.—Investigation of the Peat Bogs and Peat Fuel Industry of Canada, 1908. Bulletin No. 1, by Erik Nystrom and A. Anrep, Peat Expert.

Report No. 89.—Reprint of Presidential address delivered before the American Peat Society, of Ottawa, July 25, 1910, by Dr. Haanel.

Report No. 151.—Investigation of the Peat Bogs and Peat Industry of Canada, 1910-1911. Bulletin No. 8, by A. Anrep.

Report No. 154.—The Utilization of Peat Fuel for the Production of Power, being a record of experiments conducted at the Fuel Testing Station, Ottawa, 1910-1911. Report on, by B. F. Haanel, B. Sc.

### PETROLEUM.

The total production of crude petroleum in Canada in 1912 was 243,336 barrels of 35 imperial gallons each, valued at \$345,050, or an average of \$1.418 for barrel, as compared with a production of 291,092 barrels, valued at \$357,073, or an average of \$1.22½ per barrel, in 1911, and 315,895 barrels, valued at \$388,550, or an average of \$1.23 per barrel, in 1910. With the exception of 93,765 gallons in 1912, 86,139 gallons in 1911, and 51,975 gallons in 1910, produced in New Branswick, the output was entirely from Ontario oil fields. The production has steadily declined during the past five years, and the output in 1912 was less than one-third that of 1907.

The statistics of production as given herewith since 1904 are based on claims made for the bounty paid by the Dominion Government, which was first provided for in 1904 by an Act passed by the Dominion Government authorizing the payment of a bounty of 1½ cents per gallon on crude petroleum produced from wells in Canada. The bounty has been continued under the 'Petroleum Bounty Act, 1909,' which provides for the payment of bounty on crude petroleum produced from oil-shales mined in Canada, as well as on oil from wells in Canada. Payments are made on claims submitted by the producers of crude oil to the Minister of Trade and Commerce. These claims have to be substantiated as to quantity by the certificate of the receiving stations, tanking companies, refiners or other purchasers, as well as by the supervising officers of the Department of Trade and Commerce.

The bounty paid on the crude petroleum produced gives, therefore, as accurate a basis as is available for a reliable statement of the annual production.

Table 1 following, shows the production of crude oil in Canada since 1901, in barrels of 35 gallons, together with the total value and average price per barrel.

PETROLEUM.-TABLE 1.

Annual Production of Crude Petroleum since 1901.

Year,	Barrels of 35   gallons.	Value.	Average price per barrel.
1903 1902 1903 1903 1905 1905 1900 1909 1910 1911	622,392 530,624 486,637 503,474 634,095 569,753 788,875 527,987 420,755 315,895 291,092	8 1,008,275 951,190 1,048,974 935,895 856,028 761,760 1,057,088 747,102 559,604 988,550 357,073	\$ cts, 1 620 1 792 2 155 1 858 1 350 1 337 1 340 1 415 1 33 1 23 1 225 1 418

Statistics of the production of crude petroleum for the years 1901 to 1904 were based on direct returns received from refineries and producers. The record of production during these years is shown in the following table:—

### Production of Crude Oil, 1901 to 1904, Based on Direct Returns.

The production in the Province of Ontario has been obtained altogether from pools situated in the southwestern peninsula of the Province.

Mr. Frederick G. Clapp, in a summary report on the oil and gas fields of Canada, states:—

'The oil production in the vicinity of Leamington in Essex county was abandoned in 1907, the district having been flooded by salt water. The prolific pools at Petrolia and Oil Springs in Lambton county continue to produce, showing a steady annual decline, as no new wells are being drilled. The same applies to the Bothwell field in Kent county, which exhibits the same characteristics as the pools in Lambton county. Careful methods of production, combined with very flavourable underground conditions, have made the production of these pools a remarkable one, considering the small average production per well. In 1910 a new oil field was discovered and being developed in Onondaga township, Brant county. The field also moduces some gas; but owing to the character of the productive formations, the composition of the oil, and the rapid decline of the gas pressure, the pool does not promise as long a life as that of the older fields.'

An estimate of the production of the various Ontario oil fields during the past five years, as kindly furnished by the Imperial Oil Company, is shown in the next table. The record for 1912 includes only the amounts purchased by this Company.

<sup>&</sup>lt;sup>1</sup> Summary Report of the Mines Branch, Department of Mines, 1912, page 56.

The falling off in production during the past four years, it will be observed, has been common to all the important fields, although the decrease in Tilbury and Raleigh has perhaps been most pronounced.

While the figures do not agree in totals with the statistics of production published in previous tables, they will nevertheless serve to show the relative importance of the several fields.

Production of Ontario Oil Fields. 1909, 1910, 1911, and 1912.

The oil refineries of Canada, of which there are four, viz.: the Imperial Oil Company, with works and chief office at Sarnia, Ont., the Canadian Oil Company, works at Petrolia, head office, Toronto; the British American Oil Company, works and office at Toronto; The Empire Refining Company, Ltd., works at Wallaceburg, used considerable quantities of imported crude oils. There is also a rapidly increasing use of imported crude fuel oils on the Pacific coast. The im-

ports of crude oil in 1912 were 120,082,405 gallons, valued at \$3,996,842, as against 71,637,533 gallons, valued at \$2,187,952, in 1911, and 53,603,778 gallons, valued at \$1,639,320, in 1910.

All refined illuminating oils, and naphtha manufactured and shipped from Canadian refineries, are inspected by the Inland Revenue Department. The total quantities of these oils inspected during the fiscal year ending March 31, 1913, were 29,366,199-19 gallons, as compared with 26,463,664-05 gallons inspected during the previous fiscal year.

There are three inspection districts, known respectively as the London, Toronto, and Windsor districts, the first mentioned covering the refinery plant at Sarnia and Petrolia, the second the Toronto refinery, the third the Wallaceburg refinery.

The following tables showing the quantities of refined illuminating oils and naphtha inspection in the several districts are quoted from the annual report of the Department of Inland Revenue.

1918	22,485,437·34	6,880,761 85	29,366,199 19

The exports of oil from Canada are comparatively small, the available statistics being shown in Table 3. During 1912, the exports as published by the Customs Department, included: crude oil 18,500 gallons, valued at \$3,964; refined oils, 36,945 gallons, valued at \$6,147; and naphtha and gasoline, 25,791 gallons,

valued at \$4,261; or a total of 81,236 gallons, valued at \$14,372. There was also an export of 397,039 gallons, valued at \$119,686, of 'other oils N.E.S. 2,' which probably included products of petroleum.

<sup>\*</sup>Includes naphtha and gasoline.

The imports of petroleum and petroleum products into Canada have been rapidly increasing, while the domestic production has been decreasing. The imports during the calendar year 1912 totalled 186,787,484 gallons of petroleum oil, crude and refined, valued at \$11,858,533, in addition to 2,144,006 pounds of wax and wax candles, valued at \$119,520. The oil imports included: crude oil, 120,082,405 gallons, valued at \$3,996,842; refined and illuminating oils, 14,748,218 gallons, valued at \$1,012,735; gasoline, 40,904,598 gallons, valued at \$5,347,767; lubricating oils, 6,763,800 gallons, valued at \$1,077,712; and other petroleum products, 4,288,463 gallons, valued at \$423,477.

The total imports in 1911 were 116,892,689 gallons of petroleum oil, crude and refined, valued at \$6,009,730, and 1,959,787 pounds of wax and wax candles, valued at \$106,424.

There was an increase in the imports of crude oil in 1912 of 48,429,154 gallons, or over 67 per cent, an increase in the imports of refined illuminating oils of 1,057,256 gallons, or nearly 7½ per cent, an increase in the imports of lubricating oils of 1,454,883 gallons, or over 27 per cent, and an increase in the imports of gasoline of 17,565,825 gallons, or over 75 per cent.

Details of the imports of oils during 1911 and 1912, are shown in Table 4.

Regulations have been adopted by the Dominion Government for the disposal of petroleum and natural gas rights. These are outlined as follows:—

# Petroleum Regulations.

Regulations for the disposal of petroleum and natural gas rights, the property of the Crown, in Manitoba, Saskatchewan, Alberta, and Northwest Territories, the Yukon Territory, and within the tract containing

three and one-half  $(3\frac{1}{2})$  million acres of land acquired by the Dominion Government from the Province of British Columbia, and referred to in sub-section (b) of section 3 of the Dominion Lands Act, approved by Order in Council, dated the 11th day of March, 1910.'

These regulations provide for the leasing of petroleum and gas rights under an area of not more than 1,920 acres to one applicant for a period of twenty-one years, subject to a rental of twenty-five (25) cents an acre for the first year, and fifty (50) cents an acre for each subsequent year.

The lessee is required to have upon the lands leased, within one year of the date of the lease, such machinery as the Minister may consider necessary for the carrying on of prospecting operations, and is required to begin boring operations within fifteen months of the date of the lease, which shall be continued with reasonable diligence, with a view to the discovery of oil or natural gas.

### PHOSPHATE.

The small production of phosphate or apatite, which has been obtained in Canada during the past fifteen years, has been obtained almost altogether as a by-product in connexion with the mining of mica. The shipments during 1912 were 164 tons, valued at \$1,640, shipped from the Little Rapids mine, township of Portland East, Quebec.

Phosphate is used at Buckingham, Que., in the manufacture of ferro-phosphorus, phosphorus, and fertilizers, and the main supply is now imported from Florida.

For a number of years previous to 1892, there was a considerable production of apatite from the district north of Buckingham, the annual output varying from 20,000 tons to 30,000 tons. The introduction of the cheaply-mined phosphates of the southern states, however, resulted in the collapse of the Canadian industry, though it was claimed at the time of closing down that there was no diminution in the available supply of mineral.

Statistics of production and exports are shown in tables following:-

#### PHOSPHATE,-TABLE 1.

<sup>\*</sup> These values do not compare with those in Table 1; the spot value is adopted for the production, while the exports are valued upon quite a different basis.

The imports of phosphate rock (fertilizer) in 1912 were valued at \$24,586; phosphorus, 13,807 pounds, valued at \$4,012; and manufactured fertilizers, valued at \$580,351. The imports in 1911 included phosphate rock (fertilizer), valued at \$46,217; phosphorus, 14,818 pounds, valued at \$4,384; and manufactured fertilizers, valued at \$386,645.

Phosphorus is manufactured at Buckingham by the Electric Reduction Company. The exports of phosphorus during the twelve months ending December 31, 1912, were 543,620 pounds, valued at \$66,806, as compared with 524,370 pounds valued at \$76,608 in 1911.

#### PYRITES.

The total shipments of pyrites in 1912 were reported as 81,526 tons, valued at \$314,085. The shipments include: 60,849 tons of copper pyrites from Quebec raines, valued at \$243,396; and 20,677 tons of iron pyrites, valued at \$70,689, from Ontario properties. In 1911 the total shipments were reported as 82,666 tons, comprising 39,122 tons of copper pyrites from mines in Quebec, and 43,544 tons of iron pyrites from Ontario mines.

The total exports of pyrites from Canada in 1912 were reported by the Customs Department as 5,938 tons, valued at \$11,935, as compared with exports in 1911 of 32,102 tons, valued at \$120,585, and in 1910, 30,434 tons, valued at \$110,071.

The imports of brimstone and crude sulphur during the calendar year 1912 were 38,647 tons, valued at \$806,690, as against 21,831 tons, valued at \$446,491, in 1911, and 22,835 tons, valued at \$474,619, in 1910.

No record is available of the quantity of sulphuric acid manufactured in Canadian acid plants. The imports of sulphuric acid during the calendar year 1912, according to Customs returns, were 4,971,446 pounds, valued at \$35,325, as compared with imports in 1911 of 1,031,803 pounds, valued at \$9,281, and 2,474,802 pounds, valued at \$21,702, imported in 1910.

Statistics of production and exports of pyrites, of imports of brimstone and crude sulphur, and of imports of sulphuric acid, are shown in the following tables:—

The Canadian Sulphur Ore Company, Ltd., Madoc, Ont.

The Northern Pyrites Company, Dinorwic, Ont.

Lake Superior Power Company, Sault Ste. Marie, Ont.

#### SALT.

The production of salt in Canada has for a number of years been obtained from salt fields in southwestern Ontario, although there was at one time a very small production in New Brunswick and Manitoba.

The total sales of salt in 1912, including salt used in the manufacture of caustic soda, etc., were 95,053 tons, valued at \$459,582 exclusive of packages, as compared with sales of 91,582 tons, valued at \$443,004, in 1911, showing a continued increase in production.

The average number of men employed during the year was reported as 231, and the amount paid in wages, \$155,648. The value of the packages used during the year was \$224,696, and stock of salt in manufacturers' hands at the close of the year was reported as 3,256 tons.

Detailed statistics of the production during the past six years showing the total sales of salt, the value of the sales, exclusive of packages, the value of the packages used, stock in manufacturers' hands at the end of each year, number of men employed and wages paid, are given in Table 1, while the total annual production since 1886 is given in Table 2.

899	59,339	254,390	1	00,000	1017,00

As will be seen by the above table, the salt industry is slowly but steadily developing, the figures of production for 1912 being the highest yet recorded.

The salt fields of western Ontario are very extensive. The salt beds form part of the Onondaga formation, of Silurian age, and the saliferous horizons underlie a territory extending from Kincardine to Lake Erie, bordering Lake Huron and the Detroit river. This basin measures an extreme length of 150 miles, with a maximum width of 40 miles at the centre, and tapering towards the ends. This would cover an area of 2,500 square miles. An idea of the immense deposits of salt contained in this area may be gathered from the fact that a borehole sunk at Goderich, in Huron county, to a depth of 1,517 feet, went through six beds of salt, ranging in thickness from 6 feet to 35 feet, whereas, at Windsor, in a well 1,672 feet deep, four beds were traversed, one of which is said to measure 250 feet in thickness.

So far, the salt industry of western Ontario is confined to the production of salt for the trade, but the Canadian Salt Company, at their Sandwich branch, in 1911 installed a plant for the manufacture of caustic soda and bleaching powder. This plant commenced operations during the last week of that year, and was operated throughout 1912. The imports of some of the soda products during the calendar years 1911 and 1912 are shown in the accompanying table.

	1911.		1912.	
	Lbs. imported.	Value.	Lbs. imported.	Value.
		8		8
Soda, ash, or barilla	44,682,937 327,307	375,132 19,193	52,167,811 584,424	421,959 33,744
Caustic soda in packages, 25 lbs. or more	13,708,922 10,202,422	253,612 64,107 88,761	14,544,545 9,996,562 19,243,823	278,579 64,020 97,768
		800,805		896,070

As at present carried on in western Ontario, the salt industry consists essentially in the production of table, dairy, and coarse salt, and a small quantity of land salt. These are manufactured by forcing water down bore-holes sunk to the rock salt bed, through a casing inside of which is a pipe of smaller diameter. A powerful pump forces water down the outer tube; this dissolves the salt, eventually forming large cavities at the bottom of the well, which offer a great surface of salt to the action of the water.

The water forced downwards is charged to saturation in the salt cavity, and, as the rock is not fissured or porous, this brine is forced upwards through the inner tube. After a process of purification and settling, this brine is evaporated either in vacuum pans or in large open air vats, and after passing through mechanical dryers or over drying floors, the salt is ready for the market.

The following are analyses of brines obtained from wells in these salt fields.

The figures are for 1,000 parts by weight:—

### Analyses of Brines.1

Analyses by Dr. T. Sterry Hunt, laboratory, Geological Survey of Canada.

### EXPORTS AND IMPORTS.

Comparatively small quantities of salt are now exported from Canada, the exports in 1912 being 289,150 pounds, valued at \$3,723.

The imports of salt, on the other hand, are quite considerable, and in total value greatly exceed the domestic production. For the calendar year 1912 the imports of salt subject to duty, included: salt in bulk dutiable at 5 cents per 100 pounds, 20,909 tons, valued at \$60,574; and salt in bags, barrels, or other packages, dutiable at 7½ cents per 100 pounds, 9,158 tons, valued at \$73,295. Salt imported from the United Kingdom or any British possession, or imported for the use of the sea or gulf fisheries, duty free, was imported to the extent of 109,639 tons, valued at \$352,081, giving total imports of 139,733 tons, valued at \$485,950.

Tables 3, 4, and 5, following, give the statistics of exports and imports of salt, since 1880.

#### MISCELLANEOUS NON-METALLICS.

### ACTINOLITE.

During the past two years shipments of actinolite were made from Actinolite, Ontario, amounting to 92 tons, valued at \$1,000, in 1912, and 67 tons, valued at \$736, in 1911. These shipments were apparently made from stock on hand. No actual mining operations have been undertaken on these actinolite deposits for some years.

### ARSENIC.

The only production of arsenic in Canada during the past two years was that recovered by the smelters at Copper Cliff, Deloro, Thorold and Orillia, in Ontario, from the ores of the Cobalt district treated at these plants.

The total production of arsenious oxide, or white arsenic, in 1912, was 2,045 tons, valued at \$89,262, as compared with 2,097 tons, valued at \$76,237, in 1911. In 1910 the production of white arsenic was 1,502 tons, valued at \$75,328, in addition to which 547 tons of arsenical ore concentrates, valued at \$5,716, were shipped from Goldboro, Nova Scotia, by the New England Mining Company.

The exports of white arsenic in 1912 were, according to Customs reports, 3,847,906 pounds (1,924 tons), valued at \$101,310, as compared with 4,125,558 pounds (2,062 tons), valued at \$81,761, exported in 1911.

The imports of arsenious oxide in 1912 were 76,528 pounds, valued at \$1,722, and of sulphide of arsenic, 451,928 pounds, valued at \$19,431. There was also an import during 1912 of arseniate, bi-arseniate and stannate of soda, amounting to 41,977 pounds, valued at \$1,595.

Under the terms of "An Act to encourage the refining of metals in Ontario," passed in 1907, and an amendment Act passed in 1912, a bounty of one-half cent per pound is offered by the Ontario Government on white arsenic, otherwise known as arsenious acid, produced from mispickel ores and not from ores carrying smaltite or niccolite or cobaltite, the total bounty paid not to exceed \$15,000 in any one year—this bounty is available until the year 1917. The full text of the Act will be found reproduced in the chapter on cobalt.

It will be observed that under the terms of this Act, the bounty is not payable on the present production of arsenic which is entirely from the Cobalt district.

In the following tables the production of arsenical ore and white arsenic, and the imports and exports of arsenic are shown.

274

#### FLUORSPAR.

The occurrence of fluorspar has been noted at several points in the vicinity of Madoc, Hastings county, Ontario. In 1905, a deposit on lot 1, concession IV of Madoc township was opened by Mr. S. Wellington, of Madoc, and a shipment of twelve tons made to Port Hope. In 1910, some development was made on a deposit on lot 10, concession XIV, of the township of Huntingdon, by Messrs. Gillespie and Wellington, and about 200 tons of mineral taken out, of which two tons, valued at \$15, were shipped during that year. Prospecting on this property has been continued during the past two years, and in 1911, 34 tons, valued at \$238, were shipped to metallurgical works at Deloro, and the Canadian steel foundries at Welland. In 1912, 40 tons, valued at \$240, were shipped to smelting works at Copper Cliff.

Imports of fluorspar are not separately shown in the reports of the Customs Department, but considerable quantities are used in steel furnaces, the quantity thus consumed in 1910 being reported as 7,461 tons; in 1911, 8,067 tons, and in 1912, 9,709 tons.

Hydro-fluo-silicic acid is used in the lead refinery at Trail, B.C., and the imports during the past four years have been as follows:—

			Pounds.	S
Fiscal	vear.	1910,	433,680	22,622
		1911.,	234,380	12,324
		1912	167,112	9,137
11	"	1913	320.844	26,358

#### MAGNESITE.

Magnesite is found in Canada in the Eastern Townships of the Province of Quebec, in the township of Grenville, Argenteuil county, of the same Province, and also in the town of Atlin, British Columbia.

The Grenville deposits are the only ones being operated, the shipments in 1912 being reported as 1,714 tons, valued at \$9,645. The deposit is situated about 12 miles from Calumet, on the Canadian Pacific railway, and has for several years been operated by the Canadian Magnesite Company of Montreal. Mining operations are carried on on the north half of lot 18, range XI; north half of lot 15, range IX, township of Grenville.

A calcining mill, with a capacity of 15 tons of calcined rock per 24 hours, has been constructed, together with a grinding plant of equal capacity. About 34 tons of calcined rock were produced during 1912. The crude rock is sold to manufacturers of carbonic acid gas in Montreal, the calcined material to sulphite mills, and for making composition flooring.

Shipments of the crude mineral in 1911 were: 991 tons, valued at \$5,531; in 1910, 323 tons, valued at \$2,160; in 1909, 330 tons, valued at \$2,508, and in 1908, 120 tons, valued at \$840.

### QUARTZ.

Considerable quantities of quartz are used by the smelters of nickel copper ores. It is also used in the manufacture of ferro-silicon, and ground quartz is used by the manufacturers of sanitary ware and enamelled ware.

The production in 1912 is reported as 100,242 tons, valued at \$195,216, as compared with 60,526 tons, valued at \$83,865 in 1911, and 88,205 tons, valued at \$91,951 in 1910.

The imports of silex, or crystallized quartz, in 1912 were 629 tons, valued at \$10,680, and the imports of flint during the same year were 2,802 tons, valued at \$30,891. In 1911 the imports of silex were 394 tons, valued at \$7,518, and of flint, 3,766 tons, valued at \$49,106.

A production of flint has been reported in Canada during the past two years by the Canadian Pebble Company of Port Arthur, Ontario, and the statistics of production are included with those of quartz. Flint pebbles are obtained from near Jackfish, Ontario.

Statistics of the annual production of quartz, so far as these have been obtained, are shown in the next table.

### TALC.

Tale is being mined in the Province of Ontario only, two mines being operated during 1912 in the county of Hastings, at Madoc and Eldorado, respectively. Development operations were also in progress on a third property in the same district, during the year.

The operators are:-

Mossrs. Cross and Wellington, Madoc, operating the Henderson mine, on 15t 14, concession XIV, Huntingdon township.

The Canadian Tale and Silica Co., Eldorado, operating mine and small mill near Eldorado.

The Henderson mine has been operated for some years, the greater part of the output being sold to Geo. H. Gillespie and Company, who operate a grinding mill in Madoc.

During 1912 the total shipments from the Henderson and Eldorado properties were 8,270 tons, valued at \$23,132.

The total quantity of talc mined was reported as 13,800 tons; 1,542 tons were shipped crude to the United States, and 6,724 tons sent to the grinding mills. The crude talc is valued at about \$2 per ton at the mine, and the ground or refined talc at an average of from \$9 to \$10 per ton.

#### STRUCTURAL MATERIALS AND CLAY PRODUCTS.

#### INTRODUCTORY.

The subjects included under this heading comprise, in the order treated: cement; clay products of various kinds, such as brick, sewerpipe and tile, pottery, etc.; lime; sand-lime brick; sands and gravels; slate and stone for building and other purposes, including granite, marble, limestone, sandstone, etc. Previous to 1912 no attempt had been made to collect a record of the production of sands and gravels in Canada, and the only statistics available were those of exports and imports. An attempt has been made to obtain statistics of production covering the year 1912, but owing to the incompleteness of our list of producers, and the failure of many to answer correspondence, only a very partial record has been obtained. A beginning, however, has been made, and no doubt more complete statistics will be obtained in succeeding years. The statistics of stone production do not include the stone used in making cement or lime, but are as complete as possible for all other established stone quarries; nevertheless there is undoubtedly a large production of stone for foundation work, road-making, and railway construction of which no record is available.

The total value of the production of these structural products in 1912, according to the record obtained, was \$28,794,869, as compared with a value of \$22,709,612 in 1911, an increase of \$6,085,258, or 26.8 per cent. The total production in 1910 was valued at \$19,627,592, and in 1909, \$16,533,349.

The Canadian consumption of products of this class is apparently still increasing at a more rapid rate than the production. The consumption based upon the above figures of production in conjunction with the records of exports and imports was in 1912 valued at \$39,139,510, as compared with a value only slightly less than \$30,000,000 in 1911, and about \$25,250,000 in 1910, and \$20,350,000 in 1909, the increased consumption in 1912 being about 30 per cent, against an increase of 18 per cent in 1911 and 24 per cent in 1910.

The structural activity which has been in evidence in Canada during the past few years was continued during 1912, as is evidenced by the large increasa in production and consumption of structural materials thus shown.

A summary of the production, imports, exports, and consumption of structural materials and clay products for 1912, and the production from 1997 to 1911 is shown in tables herewith.

### Structural Materials, Calendar Year, 1912.

An increased production is shown for each product.

The increase in the value of cement sales in 1912 over 1911 was 19 per cent; an increase of production of clay products 26-5 per cent; an increase in the production of stone quarries of 9 per cent, and an increase in the production of lime of 21.5 per cent. The production of sand-lime brick was over twice that of the previous year. The production of sand and gravel is shown as valued at \$1,512,099 in 1912. As already explained this is a partial record only, but it is hoped that the figures obtained in following years will be more complete. The production of slate remained practically the same as in 1911 and forms but a small percentage of the Canadian consumption.

The exports of structural materials is apparently small, the total value reported for 1912 being \$539,476, of which about 85 per cent is made up of sand and gravel. The imports of structural material products on the other hand are quite large, amounting in 1912 to nearly 27 per cent of the total consumption. The aggregate value of these imports was \$10,883,117, as compared with a value of \$7,710,552 in 1911, showing an increased import of \$3,172,565, or about 41 per cent. The imports in 1912 included: Portland cement valued at \$1,969,529; clay products, \$6,592,540; lime, \$207,481; sand and gravel, \$445,781; slate, \$200,643, and stone, \$1,467,143. The corresponding imports of 1911 were: cemnet, \$834,879; clay products, \$5,156,544; lime, \$161,985; sand and gravel, \$246,613; slate, \$169,685, and stone, \$1,140,846.

### CEMENT.

The production of cement in Canada during the past few years, though all classed as Portland, has included an output of Puzzolan cement, made from blast furnace slag at Sydney, N.S., and a small production of 'natural Portland,' made at Babcock, Manitoba, 75 miles southwest of Winnipeg, on the Canadian Northern railway.

The total quantity of cement made in Canada in 1912 as per reports received from the manufacturers was 7,141,004 barrels, 350 lbs. net each (1,249,675 tons), as compared with 5,677,539 barrels (993,569 tons) made in 1911, an increase of 1,463,465 barrels, or over 25 per cent.

The total quantity of Canadian Portland cement sold in 1912 was 7,132,732 barrels (1,248,228 tons), as compared with 5,692,915 barrels (996,260 tons) in 1911, an increase of 1,439,817 barrels, or over 25 per cent.

The total consumption of Portland cement in 1912, including Canadian and imported cement, was 8,567,145 barrels of 350 lbs. net each (1,499,250 tons), as compared with 6,354,831 barrels (1,112,095 tons) in 1911, or an increase of 2,212,314 barrels, or nearly 35 per cent.

During the early part of the season of 1912 there was a shortage of cement supplies in western Canada owing to the apparent inability of Canadian producers to meet the demand. It was claimed, however, that the shortage was due in large part to the failure of transportation companies to provide sufficient transportation facilities for moving the cement from the eastern mills to the western market.

Acceding to a strong demand from western cities and with a view to relieving the situation in some measure, the Dominion Government reduced the duty on cement by one-half, such reduction remaining in force from June 12 to October 31.

The cement industry continues to increase rapidly in importance and its output is exceeded in value amongst non-metallic products by coal and clay products only.

There were employed in Canadian cement plants during 1912 an average of 3,461 men, and the total wages paid were \$2,623,902.

The market prices of cement according to quotations published in trade journals showed practically no variation during the year. The 'Canadian Engineer' reports prices at Halifax as \$2 per barrel; at Montreal for large lots \$1.35 to \$1.40; bags 40 cents extra; at Toronto in very large quantities \$1.50; car lots \$1.65; small city dealers, \$1.90; bags 40 cents extra in each case; at Winnipeg, \$2.50 to \$2.60 per barrel in bags.

The average price at cement mills as returned by producers was for Quebec province \$1.15, Ontario, \$1.11, Alberta, \$2.16, and British Columbia, \$1.50 per barrel.

Statistics of the total annual sales of natural rock and Portland cement since 1887 are shown in the following table:—

<sup>\*</sup> Quantities sold or shipped.

The production of cement in 1912 was derived from twenty-four operating plants in addition to which sales were made from two other plants not producing, the total daily capacity of these plants being 36,515 barrels. The producing plants were distributed as follows: one in Nova Scotia using blast furnace slag; one in Manitoba making a natural Portland cement; one in British Columbia; three in Alberta and three in Quebec using limestone and clay; fifteen in Ontario, of which ten use marl and five limestone.

A comparison of the principal statistics of 1911 and 1912 showing the increases or decreases as the case may be, is given in the next table.

Comparison of Production, Sales, and Imports of Portland Cement in 1911 and 1912.

	1911.	1912.	Increase.	%	De- crease-	%
Cement sold	5,692,915 5,677,539 918,965 903,589	7,132,732 7,141,004 894,822 903,094		25·3 25·8	24,143	2 G

The large increase in output and sales has already been mentioned. Stocks on hand December 31, 1912, were practically the same as stocks at the end of the previous year, about 900,000 barrels. The average price per barrel at the mill for all plants showed a slight falling off in 1912, being reported as \$1.27% as compared with \$1.34 in 1911.

An increase of 15 per cent is shown in number of men employed, and an increase of over 24 per cent in amount of wages paid.

The imports of cement in 1912 were over double those of 1911, the increase being over 110 per cent in quantity and nearly 136 per cent in value. The average price per barrel of imported cement in 1912 is shown as 11 cents higher than the average price in 1911.

Of the total quantity of cement made in 1912, 1,420,155 barrels were made from marl, and 5,720,849 barrels from limestone and slag. In 1911, there were 1,626,857 barrels made from marl and 4,050,682 barrels from limestone and slag, while in 1910, 1,214,479 barrels were made from marl, and 3,181,803 barrels from limestone and slag. With the exception of the new plant at Marlboro, Alberta, practically all of the newer plants erected during the past few years have been

limestone plants. The proportion of cement made from marl in 1908 was about 45 per cent of the total output, as compared with 28 per cent in 1911 and 20 per cent in 1912.

Statistics of the annual production of Portland cement since 1887, showing the quantity made, quantity sold, stocks on hand at the end of the year, value of sales, etc., are shown in the next table.

Imports and Exports.—Very little cement is exported from Canada, the quantity is not shown in the export records of the Customs Department but the value of the export during 1912 was only \$2,436 as against a value of \$4,067 in 1911, and \$12,914 in 1910.

The imports of cement previous to 1901 were larger than Canadian production, but gave way steadily to the increasing domestic output until 1909 during which year the imports amounted to 142,194 barrels, or about 3 per cent of the total Canadian consumption. During the past three years there has been a steady increase in the importation of cement, the imports for 1912 being 1,434,413 barrels, as compared with 661,916 barrels in 1911, and 349,310 barrels in 1910.

The United States has been the principal source of imports during the past few years and supplied about 89 per cent of the imports in 1912, as compared with about 9 per cent from Great Britain. In 1911 about 66 per cent of the total imports were from the United States and 29 per cent from Great Britain. The imports of cement during 1911 and 1912 by countries, are shown in the next table.

# Imports of Cement, 1911 and 1912.

		1911	1912.					
	Cwt.	%	Value.	Average value.	Cwt.	%	Value,	Average value.

Totals Equivalent in barrels of 350 lbs.	2,316,707 661,916	100.0	834,879	36	5,020,446 1,434,413	100.0	1,969,529	3(

The duty on cement during 1912 is shown by the following items of the Customs tariff except, as already mentioned, that only one-half this rate was in force during the period from June 12 to October 31.

	British Preferential tariff.	Iutermediate tariff,	General tariff.
Cement, Portland, and hydraulic or water lime, in barrels, bags, or casks, the weight of the package to be included in the weight for duty per hundred pounds.  Bags in which cement or lime mentioned in the next preceding item is imported.	8 cents		

The duty on cement alone is equivalent to 43\frac{3}{4} cents per barrel of 350 pounds net, and as bags are valued at 10 cents each, there is a further additional duty of 8 cents per barrel, making a total of 51\frac{3}{4} cents. As the weight of the bag is included in taking the weight for duty, the general rate will be practically 52 cents per barrel.

A permanent revision of the cement duties was made in the early part of 1913 and from May 13, 1913, the cement duties have been as follows:—

	British Preferential tariff.	Intermediate tariff.	General tariff.
Cement, Portland, and hydraulic or water lime, in barrels, bags, or casks, the weight of the package to be included in the weight for duty per hundred pounds.  Bags in which cement or lime mentioned in the next preceding item is imported.	7 cents		

This is equivalent to a duty under the general and intermediate tariffs of 35 cents per barrel on cement, and 8 cents on the bags, or a total of 43 cents per barrel.

In view of the reduction in duty during a portion of the year it may be of interest to record the monthly import from Great Britain, the United States, and other countries, which is shown as follows:—

Imports of Cement by Months During 1912 from Great Britain, The United States, and Other Countries.

<sup>\*</sup> Cement not elsewhere specified and manufactures of cement.

Consumption of Cement.—The consumption of cement is represented practically by the domestic production, together with the imports, the exports being so comparatively small as to be negligible. The total consumption of Portland cement in Canada in 1912 was 8,567,145 barrels (1,499,250 tons), made up of 7,132,732 barrels (1,248,228 tons) of Canadian cement, and 1,434,415 barrels (251,022 tons) of imported cement, the Canadian cement representing 83-3 per cent, and the imported cement 16-7 per cent of the total.

In 1911 the total consumption of cement was 6,354,831 barrels (1.112,095 tons), made up of 5,692,915 barrels (996,260 tons) of Canadian cement, and 661,916 barrels (115,835 tons) of imported cement, the Canadian cement representing 90 per cent, and the imported cement 10 per cent of the total.

In 1910 the total consumption of cement was 5,103,285 barrels (893,075 tons), of which 93 per cent was of domestic production and 7 per cent imported. In 1901 the total consumption was 872,966 barrels (152,769 tons), of which only 36 per cent was made in Canada and 64 per cent imported. The following is an estimate of the annual consumption of Portland cement in Canada during the past eleven years:—

Annual Consumption of Portland Cement.

Calendar Year.	Canadian.		Imported.		Total.
	Barrels,	%	Barrels.	%	Barrels
1901.	317,066	36	555,900	64	872,966

Nova Scotia.—There is but one cement plant in Nova Scotia located at Sydney and operated by the Sydney Cement Company, Limited. Puzzolan cement is made from blast furnace slag and lime.

New Brunswick.—There are no cement plants in this Province, but it is reported that negotiations have been carried on looking to the erection of a plant at Greenhead, near St. John.

Quebec.—This Province has three completed cement mills all operated by the Canada Cement Company, Limited; two situated near Montreal at Longue Pointe and Pointe aux Trembles, and the third in Hull. The Montreal mills have a combined capacity of 7,800 barrels per day, and the Hull mill 2,400 barrels per day. A new plant is being erected by the Standard Cement Company, at Chambord, Lake St. John. The total quantity of cement sold or used during 1912 in this Province was 2,714,685 barrels valued at \$3,134,499.

Ontario.—Ontario is the most important cement producing province, having 15 mills, of which 6 with a total daily capacity of 11,400 barrels are operated by the Canada Cement Company, and 9 mills having a total daily capacity of 8,500 barrels, by independent companies. Five plants are operated on limestone and have a daily capacity of 9,600 barrels, while 10 plants with an aggregate daily capacity of 10,280 barrels are utilizing marl deposits. The names of the operating companies and location of plants, are shown in the list of cement producers following.

The total sales of cement in Ontario during 1912 were 3,044,713 barrels valued at \$3,372,897, as compared with 3,090,786 barrels valued at \$3,741,039 in 1911. There was thus a falling off of sales in Ontario during 1912 of 46,073 barrels, or about 1.5 per cent.

The detailed statistics of production during 1911 and 1912 are shown in the next table.

Cement Production in Ontario, 1911 and 1912.

	1911.	1912.	Increase.	%	Decrease.	%

Manitoba.—The Commercial Cement Company of Winnipeg is operating a natural Portland cement plant at Babcock, 75 miles southwest of Winnipeg on the Canadian Northern railway. The capacity of the plant is reported as about 175 barrels per day. The Canada Cement Company, which is constructing a new plant near Winnipeg, expects to have its clinker grinding plant in operation early during 1913. Clinker produced in the Company's plants in Ontario will be used until the Winnipeg plant is completed.

Alberta.—Three completed coment plants in Alberta are located at Exshaw, Calgary, and Blairmore, respectively. All three plants are operated with limestone and shale. The first two operated by the Canada Cement Company have an aggregate daily capacity of 3,300 barrels. The Rocky Mountains Cement Company has increased the capacity of its plant at Blairmore to 800 barrels in 1912. A new plant is being erected at Marlboro, Alberta, near the Grand Trunk Pacific railway, about 140 miles west of Edmonton. This plant which will have a capacity of about 1,500 barrels per day will utilize marl deposits which are situated close to the railway. The Keystone Portland Cement Company is also proposing to erect a mill at or near Blairmore.

British Columbia.—The Tod Inlet plant of the Vancouver Cement Company, Limited, near Victoria, B.C., with a capacity of 2,000 barrels per day, has been in operation for a number of years. Limestone and clay are obtained from the Company's property adjoining the works.

New plants are being constructed in this Province, one adjoining the Tod Inlet plant; the second at Princeton.

At Tod Inlet or Bamberton, the Portland Cement Construction Company of London, England, has been engaged in the construction of a large plant which was still incomplete at the end of the year. The British Columbia Portland Cement Company, Limited, is constructing at Princeton, a plant with a capacity of from 500 to 700 barrels per day. This plant also was incomplete at the end of the year.

The production of cement in Ontario has already been shown separately and the aggregate production in all other provinces during 1911 and 1912 is given in the next table.

Cement Production in Other Provinces, 1911 and 1912.

## CLAYS AND CLAY PRODUCTS.

For a number of years a small quantity of fireday has been produced and sold and in 1912 there was a small production of kaolin or china-clay from a deposit in the Province of Quebec. With these exceptions, practically all of the clay production in Canada is manufactured by the producer, and this report, therefore, treats almost altogether of the manufactured product.

The clay products made in Canada comprise brick of various kinds, including common and pressed, ornamental and fancy building brick, paving brick, firebrick, porous fireproofing brick and blocks, sewerpipe and drain tile, pottery and sanitary ware, the last two products chiefly from imported clays.

The total value of the production of clay products in 1912 was \$10,575,869, as compared with a value of \$8,359,933 in 1911, showing an increase of \$2,215,936 or over 26.5 per cent.

The production of clay products has been increasing very rapidly during the past few years and many new plants have been erected both in eastern and western Canada. For the year 1912 about 459 active firms reported, as against 419 firms active in 1911, and 438 firms in 1910. The average number of men employed in 1912 was 10,415, as compared with 9,131 in 1911 and 8,656 in 1910. The total wages paid in 1912 were \$4,488,957, as against \$3,524,058 in 1911.

Of the several provinces Ontario is by far the largest producer of clay products, being credited in 1912 with 46 per cent of the total value of the output, as compared with 47 per cent in 1911. Quebec contributed 16 per cent, Alberta about 12.5 per cent, and Manitoba 10 per cent of the total output in both years, and British Columbia 8 per cent in 1911, and 9.4 per cent in 1912.

Of the total value of the production in 1912, building and paving brick, including fireproofing, contributed \$9,163,666, or about 863 per cent; sewerpipe and tile production were valued at \$1,242,503, or 11.7 per cent of the total. The total value of the production of pottery was reported as \$426,589, of which \$43,955 is estimated as attributable to Canadian clays, the balance to imported clays; the value of the production of fireclay and firebrick was \$125,585. Compared with the previous year, the production of building, paving, and fireproofing brick, shows an increase of about 30 per cent, while the aggregate production of sewerpipe and drain tile shows a slight falling off.

The average price of common and building brick for the whole of Canada in 1912 is reported as \$9.11, as compared with \$8.37 in 1911; \$8.13 in 1910, and \$7.81 in 1909. The average price of pressed or front brick for the same years was respectively \$12,86; \$12.53; \$11.89, and \$11.01, thus showing a general increase in cost of building brick.

A comparison of statistics of imports of clay products, shown in succeeding tables, with those of production, is worthy of note. It will be observed that the total value of the imports in 1912, was \$6,592,540 (not including certain items probably in part covering clay products), and after deducting a small export a total approximate consumption of clay products valued at \$17,160,660 is shown of which about 62 per cent was of domestic production.

In 1911, the approximate consumption was valued at \$13,516,477, of which about 62 per cent was of domestic production. In 1909 the approximate consumption was valued at \$9,972,995, of which about 70 per cent was of domestic production.

While the imports of building brick continue to increase, the total value is still small compared with the home production. In the case of paving brick, however, the imports are about double, and of firebrick nearly eight times the Canadian output. The imports of sewerpipe have also increased much more rapidly than the production during the past year.

Statistics of the production in 1912 and 1911 of the several classes of clay products by provinces, are shown in the following tables:—

Exports and Imports.—The only export of clay products recorded is that of building brick, of which the exports in 1912 were 694,000, valued at \$8,493, and manufactures of clay valued at \$256. In 1911 the exports were: building brick, 394,000 valued at \$3,997, and manufactures of clay valued at \$2,071.

The imports of clay products and of clay reached a total value during the calendar year 1912 of \$6.592.540, equivalent to about 62 per cent of the domestic production. The total imports in 1911 were valued at \$5,156,544, showing an increase in 1912 of \$1,435,996 or nearly 28 per cent, as against an increase in 1911 over 1910 of 19 per cent. In both years the imports have increased at a higher rate than the domestic production. Clay imports are classified by the Department of Customs under three main subdivisions, including: brick and tile, earthenware and chinaware, and clays. The imports of clays in 1912 were valued at \$288,394 and included chiefly china-clay and fireclay, with a small quantity of pipeclay and other clays not classified. The value of china-clay imports was \$127,402 and of fireclay \$140,500. In 1911 the total value of the imports of clays was \$270,247, and included china-clay valued at \$125,768 and fireelay valued at \$125,199. The imports of these clays have varied considerably from year to year, and do not show the same general increase as do the imports of manufactured clays. A reference to the next table will show the changes since 1906. The imports classified under brick and tile were valued in 1912 at \$3,209,190, of which about 28 per cent was firebrick, other important items being building brick, sewerpipe, and paving brick. There was also an importation under this class of manufactures of clay not specially designated, valued at \$818,467. The value of the imports of brick and tile in 1911 was \$2,369,761, of which about 34 per cent was firebrick. The imports during 1911 of manufactures of elay not specially designated, were valued at \$523,998. The imports of these unclassified brick and tile have increased steadily year by year, the value of such imports in 1905 having been only \$20,804. The increase in the imports of brick and tile in 1912, as compared with 1911, was a little over 35 per cent. The imports of earthenware and chinaware, of which the most important class is table-ware, were valued in 1912 at \$3,094,956, as against \$2,516,536 in 1911, or an increase of about 23 per cent.

The detailed record of imports since 1906 is shown in the next table, the figures for the years 1906 to 1909 covering the fiscal year; for the last four-years, the calendar year is used.

Imports.	12 months ending June, 1906.	9 months ending March, 1907.	12 months ending March, 1908.	12 months ending March, 1909.	Calendar year 1909,	Calendar year 1910.	Calendar year 1911,	Calendar year 1912.

<sup>\*</sup> Includes stove linings, N. E. S.

In addition to the imports shown in the above table, there is also a considerable annual importation of 'chalk, china or cornwall stone, cliff stone and feldspar, fluorspar, magnesite ground or unground,' much of which is no doubt used in connexion with the manufacture of clay products. The value of these imports during the calendar year 1912 was \$167,990; of which \$131,694 was from the United States, \$34,732 from Great Britain, and \$1,564 from other countries. The value of the imports under this item during the calendar year 1911 was \$147,640. There is also an annual importation of 'baths, bath tubs, basins, closets, lavatories, urinals, sinks, and laundry tubs of any material,' the value of such imports during 1912 being \$382,920, as compared with \$285,847 during the year 1911.

Imported clay products are derived chiefly from Great Britain and the United States, although considerable quantities of earthenware, china, and porcelain ware, white granite or iron-stoneware, etc., are brought from Germany, France, Austria-Hungary, and Japan. The imports during the fiscal year, showing the country of origin, are shown in the next table. Of the brick and tile imported 82 per cent was from the United States and 17.9 per cent from Great Britain; and only \$2,045 worth from other countries. Of the earthenware and chinaware, 60 per cent was imported from Great Britain; 16 per cent from the United States; 12 per cent from Germany; 5 per cent from France, and considerable values also from Japan, Austria-Hungary, and other countries. The crude clays were imported principally from Great Britain and the United States.

A record of the total annual value of the imports of clay products since 1900 by fiscal years is shown in the following table. In thirteen years Canada has imported clay products to the value of \$35,396,706. The increase in imports has been most pronounced in the case of brick and tile, the imports of which in 1900 amounted to \$145,914, as compared with \$2,462,181 in 1912. The imports of earthenware and chinaware have almost doubled in the same time.

Imports of Clay Products (total value) 1900-12.

#### CLAY BUILDING BRICK

The total production of clay building brick, including the common and pressed varieties, but excluding ornamental, paving, firebrick, and fireproofing brick, is shown by provinces for the past four years in the following tables.

In 1912 the total sales were 894,371,954, valued at \$8,620,229, made up of 769,191,532 common valued at \$7,010,375, or an average value per thousand of \$9.11; and 125,180,422 pressed brick valued at \$1,609,854, or an average value per thousand of \$12.86. In addition to the common and pressed brick there was a production of ornamental brick of 371,356 valued at \$8,595, and a production of fireproofing brick and architectural terra-cotta, valued at \$448,853.

In 1911 the total sales were 732,901,056, valued at \$6,515,472, made up of 645,550,517 common, valued at \$5,420,390, or an average value per thousand of \$8.37; and 87,350,539 pressed brick, valued at \$1,094,582, or an average value per thousand of \$12.53. In addition to the common and pressed brick there was a production of ornamental brick of 605,643, valued at \$11,281, and a production of fireproofing brick and architectural terra-cotta valued at \$409,585.

In 1910 the production was 627,715,319 common brick, valued at \$5,105,354, or an average value per thousand of \$8.13; and 67,895,034 pressed brick, valued at \$807,294, or an average value per thousand of \$11.89; the total of the two classes being 695,610,353, valued at \$5,912,648. The production of ornamental brick in 1910 was 703,345, valued at \$16,092; and of fireproofing and architectural terra-cotta \$176,979.

There were 459 active firms reporting in 1912, as compared with 419 firms in 1911, and 397 firms in 1910.

The demand for brick has continued very strong both in eastern and western Canada, and many new plants have been and are being constructed.

The exports and imports of building brick since 1891 and 1880 respectively, are shown in the two following tables. The exports have never been large, averaging for a number of years past about \$6,000 per annum. The exports fell off somewhat in 1911 to a value of \$3,977, but increased again in 1912 to a value of \$8,493. The annual imports for a number of years previous to 1903 averaged only about \$20,000 in value; during the past nine years, however, the imports have rapidly increased from \$100,000 to nearly \$800,000 per annum. During the calendar year 1912, the imports were \$1,425,000 brick valued at \$763,470, of which 3,071,000 valued at \$32,731 or an average of \$10.66 per thousand, were imported from Great Britain, and 78,350,000 valued at \$730,739, or an average of \$9.33 per thousand, from the United States. The imports during the calendar year 1911 were 51,102,000 brick valued at \$475,865, of which 6,404,000, valued at \$72,675 or an average of \$11.35 per thousand, were imported from Great Britain, and 44,698,000 valued at \$403,190 or an average of \$9.02 per thousand, from the United States.

It will be observed that in 1912 there was a considerable falling off in the imports of brick from Great Britain and an increase of close to 100 per cent on the imports of brick from the United States.

Prices.—The price of brick varies greatly with the quality, locality, market, or demand. The values as given in the table of production are those at the yard or kiln and do not include costs of delivery. They do not, therefore, represent the price to the consumer. The average price of common brick at the kiln in 1912 according to these returns was \$9.11, as compared with \$8.37 in 1911, and \$8.13 in 1910; and of pressed brick \$12.86, as compared with \$12.53 in 1911 and \$11.89 in 1910.

In the Maritime Provinces during 1912, the price of common brick varied from \$6.50 to \$10, averaging for Nova Scotia \$6.86, and for New Brunswick \$9.22.

In Quebec the price of common brick varied between \$5 and \$10.50, averaging \$8.08; while the price of pressed brick averaged \$12.04, with only two firms reporting production. The average price of common brick in Ontario was \$8.69, the limits of variation being \$6 and \$11; while for pressed brick the average was \$10.40 and the variation from \$8.75 to \$12.

 $49509 - 20\frac{1}{2}$ 

In the western provinces the averages for common brick were fairly uniform \$9.61 to \$11.47. In individual yards the prices varied from \$9 to \$14. Present brick in the west averaged \$15.13 per thousand in Manitoba; \$16.63 in Saskatchewan; \$14.77 in Alberta; and \$27.53 in British Columbia.

The following table shows the average values at the kilns of common and pressed brick during 1910, 1911, and 1912, as furnished by the producers:

Average Prices per Thousand of Common and Pressed Brick.

According to trade journals, the following retail prices were quoted during the year:—

Toronto.—Grey and red stock brick during the first nine months of the year \$10.50 to \$11 per M; and during the last three months \$11.50 to \$12 per M. Don Valley No. 1, dry pressed and buff bricks at the yard \$17 per M. Port Credit brick f. o. b. Port Credit during the last three months of the year, wire cut, \$10, and pressed brick \$12 to \$15 per M.

Winnipeg.—Kiln run brick during the first nine months, \$11, \$12, and \$16 according to quality. Pressed brick \$25 to \$50 per M.

Nova Scotia and New Brunswick.—There was a slight falling off in the production of brick in Nova Scotia in 1912 and a small increase in the production in New Brunswick. Comparatively little pressed brick is made. The total value of the output in Nova Scotia was \$130,108 and the chief sources of production, Annapolis Royal, Middleton, Pugwash, Elmsdale, Mira Gut, River Denys, and New Glasgow. A feature of special interest during 1912 was the consolidation of the clay working plants at Annapolis Royal, Bridgetown, Middleport, Pugwash, and Elmsdale, under the name of the Nova Scotia Clay Works, Limited.

The total value of the production in New Brunswick was \$53,350 and the principal sources of production, Fredericton, St. John, Little River, Chatham, and St. Stephen.

Quebec.—The total production of brick in Quebec in 1912 is reported by 74 operating firms as 173,336,557 valued at \$1,446,880, comprising 161,836,557 common brick valued at \$1,308,380, or \$8.08 per thousand, and 11,500,000 pressed brick valued at \$138,500, or \$12.04 per thousand.

The production by 60 active firms in 1911 was reported as 122,041,580 brick valued at \$1,033,270.

While brick-making is carried on at many places in the Province, the principal plants are located at Laprairie, Sherbrooke, and St. Jean des Chaillons.

Ontario.—Over 44 per cent of the brick production in Canada in 1912 was made in Ontario, the total sales as reported by 271 firms being 423,670,184 valued at \$3,807,195, and including 350,461,874 common brick valued at \$3,045,840 or an average of \$8.69 per thousand, and 73,208,310 pressed brick, valued at \$761,355, or an average of \$10.40 per thousand. The total sales in 1911 as reported by 262 operating firms were 369,004,371 valued at \$3,028,046, and comprised 318,670,621 common brick valued at \$2,513,965 or an average of \$7.89 per thousand, and 50,333,750 pressed brick valued at \$514,081 or an average of \$10.21 per thousand.

The city of Toronto and vicinity, including the counties of York and Halton, is the principal brick making section and in 1912 produced about 52 per cent of the Ontario production, or about 23 per cent of the total Canadian production of brick. The district next in importance is the county of Wentworth, comprising the city of Hamilton and vicinity, producing nearly 11 per cent of the Ontario production. The Ottawa district, including the counties of Russell and Carleton, produced over 7 per cent. The greater part of the pressed brick, reported as such, was made in the Toronto and Hamilton districts.

The production by principal counties in 1912 and 1911 is shown in the accompanying tables.

Sales of Common and Pressed Brick in Ontario by Principal Counties, 1912.

<sup>\*</sup> Preliminary.

In addition to the ordinary clay building brick, there was produced in this Province in 1912 ornamental brick valued at \$7,168, and fireproofing and terracetta valued at \$135,087. In 1911 the production of ornamental brick was valued at \$7,441 and of fireproofing and terra-cotta \$51,080.

Manitoba.—The production of clay building brick in the Province in 1912, as reported by 21 firms, was 87,178,937, valued at \$1,012,801, comprising 83,681,237 common brick valued at \$957,854 or an average of \$11.47 per thousand and 3,497,700 pressed brick valued at \$52,947 or \$15.13 per thousand. The production as reported by 18 firms in 1911 was 81,400,000 valued at \$826,928 and included 79,600,000 common brick valued at \$805,178 or \$10.11 per thousand and 1,800,000 pressed brick valued at \$21,750 or \$12.08 per thousand.

The principal brick-making plants are located at Winnipeg, St. Boniface, Morris. Lac du Bonnet, Portage la Prairie, Sidney, Brandon, Gilbert Plains, Virden, Balmoral, Lavenham, Neepawa, and Whitemouth

Saskatchewan.—Returns from 14 operating firms show a production in 1912 of 30,538,771 brick, valued at \$332,943, which includes 25,338,771 common brick valued at \$246,443 or an average of \$9.73 per thousand and 5,200,000 pressed brick valued at \$86,500 or an average of \$16.63 per thousand. The total production in 1911 by 13 firms was 21,071,660 brick valued at \$224,758.

The principal clay plants are located at Estevan, Prince Albert, Saskatoon, Weyburn, Rosthern, Verigin, Arcola, and Broadview.

Alberta.—The production of building brick has been increasing very rapidly and in 1912 the production in this Province was surpassed only by Ontario and Quebec. During the past year the sales as reported by 33 active firms were 93,759,980 brick valued at \$1,105,912, as compared with sales by 28 firms in 1911 of 71,772,930 brick valued at \$779,001. The 1912 output comprised 70,074,568 common brick valued at \$755,986 or an average of \$10.69 per thousand and 23,685,412 pressed brick valued at \$349,926 or an average of \$14.77 per thousand. In addition to building brick there was a production in this Province during 1912 of fireproofing valued at \$248,712.

The principal centres of production are Edmonton, Cochrane, Calgary, Medicine Hat, Redeliff, Lethbridge, Red Deer, Brickburn, Innizfail, and Vermilion.

British Columbia.—The brisk making industry has also grown rapidly in British Columbia, the increase of production of 1912 over 1911 being 64 per cent. During 1912 the total sales were 61,284,565 valued at \$731,040, and included 53,345,565 common brick valued at \$512,514 or an average of \$9.61 per thousand and 7,939,000 pressed brick valued at \$218,526 or an average of \$27.53 per thousand. In 1911 the total sales were 39,680,515 brick valued at \$443,829. There were 28 active firms engaged in brick making in 1912, as compared with 19 in 1911.

The principal centres of manufacture are Vancouver, New Westminster, Clayburn, Cloverdale, Bazan Bay, Pender Island, Port Haney and vicinity, Anvil Island, Victoria, and Sydney.

#### CLAY PAVING BRICK.

The total production of paving brick and paving blocks in Canada in 1912 was reported as 4,579,500 valued at \$85,989, or an average value per thousand of \$18.78, as compared with a production of 5,220,400 valued at \$79,444, or an average value of \$15.22 per thousand in 1911.

This paving brick is made chiefly at West Toronto, Ontario, from shale obtained from the banks of the Humber river, although during 1912 there was also a small production reported at Pender island, near Vancouver, B.C.

The annual production has for a number of years varied from 3,000,000 to over 5,000,000 per season, and the output finds a market chiefly in Toronto.

Statistics of production since 1887 are shown in the next table:-

The imports of paving brick during the past four years have considerably exceeded the domestic production. During the calendar year 1912 the imports were 11,793,000 valued at \$160,663, or an average value of \$13.62 per thousand, and included 6,709,000 valued at \$95,610, or \$14.25 per thousand, from the United States; 5,044,000 valued at \$64,375, or \$12.76 per thousand, from Great Britain; and 40,000 valued at \$678, or \$16.95 per thousand, from other countries.

The imports during the calendar year 1911 were 11,450,000 valued at \$164,292, and included 4,988,000 valued at \$78,201, or \$15.68 per thousand, from the United States, and 6,462,000 valued at \$86,091, or \$13.32 per thousand, from Great Britain.

1895 1896 1897 1898 1899 1900 1901 1902 1903	275 918 52 367 1,583 2,175 900 1,030 1,337	\$ 5,006 10,132 719 2,337 23,648 35,644 10,414 16,788 18,811	\$ cts.  18 20 11 04 13 83 6 37 14 94 16 39 11 57 16 30 14 07	1904 1905 1906 1907 (9 mos). 1908 1909 1910 1911	4,104 2,182 5,340	\$ 29,753 32,578 46,008 23,256 61,346 101,187 138,763 130,861 165,650	\$ cts.  14 98 13 86 11 21 10 66 11 49 11 12 108 14 36

<sup>\*</sup>Duty 20 per cent. †The imports during July, 1908, under the general tariff, are reported as 6,581 M., value \$7,317, an apparent error. There appears also to be an error in the entries for July, August, and September of the same year. Similar errors were apparently made in the figures for the fiscal year 1910 and the total number has, therefore, been omitted for these years. The actual value of the imported brick varies from \$10 to \$12 per M.

#### FIRECLAY AND FIRECLAY PRODUCTS.

There are a number of clays from different localities in Canada that have been used in the manufacture of refractory brick, or firebrick, and for furnace linings, etc., which have been usually termed 'fireclays.' These include clays found with the coal measures at Westville, Nova Scotia, and at Comox, Vancouver island, also clays found south of Moosejaw, Sask., and at Clayburn, near the city of Vancouver, B.C. Stove linings and other refractory clay products are made at several places in Ontario and Quebec from imported clays.

The total value of the sales of fireclay, firebrick, and fireclay products in 1912, was \$125,585, as compared with a valuation of \$89,130 in 1911, and \$50,215 in 1910. There was in addition in 1912 a production of firedly products valued at \$25,000 reported as being made from imported clays.

The production in 1912 included fireclay or refractory clay sold as such to the extent of 6,307 tons, valued at \$24,343; firebrick, 3,429,594 valued at \$67,192, or an average of \$19.59 per thousand; and other fireclay products valued at \$34,050.

In 1911 the production comprised 7,532 tons of fireclay, and refractory clay sold as such, valued at \$24,128; firebrick 2,367,937, valued at \$44,122, or an average of \$18.63 per thousand; and other fireclay products valued at \$20,880.

The imports of firebrick during the calendar year 1912 were valued at \$953,621, of which \$860,587 worth was imported from United States, \$91,286 from Great Britain, and \$1,798 from other countries. The imports of firebrick in 1911 were valued at \$814,414, of which \$659,602 was imported from United States, and \$154,020 from Great Britain. In 1910 the imports of firebrick were valued at \$811,927 and included \$734,908 from United States and \$76,902 from Great Britain. Fireclay was imported for the calendar year 1912 to the value of \$140,500, as compared with a value of \$125,199 in 1911, and \$124,293 in 1910.

Statistics of the annual production since 1907, of firebrick, refractory clay, or fireclay, sold as such, and of fireclay products; and statistics of the imports of firebrick and fireclay are shown in the following table:—

Production of Fireclay and Fireclay Products.

#### SEWERPIPE AND DRAIN TILE.

The total value of the sales of sewerpipe in 1912 was \$884,641, as compared with a value of \$812,716 in 1911, and a value of \$774,910 in 1910. About 54 per cent of the production in 1912 was made in Ontario.

Following is a list of firms reporting production of sewerpipe in 1912:—
Standard Clay Products, Limited, St. Johns, Que., and New Glasgow,
NS

Ontario Sewerpipe Company, Mimico, Ont.

Dominion Sewerpipe Company, Waterdown, Ont.

Hamilton & Toronto Sewerpipe Company, Waterdown, Ont.

British Columbia Pottery Company, Victoria, B.C.

The imports of drain pipe and sewerpipe during 1912 were valued at \$507,024, of which \$431,600 was imported from the United States, \$75,394 from Great Britain, and \$30 from other countries.

The total imports during 1911 were valued at \$382,929, and included \$338,644 from the United States, \$44,278 from Great Britain, and \$7 from other countries.

The total value of sales of drain pipe in Canada in 1912, as reported to this Branch, was \$357,862, as compared with \$339,812 in 1911, and \$370,008 in 1910. The greater part of this production is in the Province of Ontario; the sales in this Province in 1912, as reported to this Branch, were valued at \$308,050, as against a value of \$300,029 in 1911, and \$334,402 in 1910.

The Ontario Bureau of Mines reports the total number of drain tile made in that Province during 1912 as 16,463,000, valued at \$279,579, or an average of \$16.98 per thousand, as compared with 21,630,000 valued at \$349,545, or an average of \$16.16 per thousand in 1911.

The imports of unglazed tile are comparatively small, the value during the calendar year 1912 being \$4,018 only, as compared with \$5,640 in 1911, and \$4,485 in 1910.

Statistics of the annual production of sewerpipe and of the imports of drain tile and sewerpipe are shown in the next three tables:—

(a) Drain tile, not glazed.

#### POTTERY AND EARTHENWARE.

The pottery made from Canadian clays has been, hitherto, chiefly of the common grades, such as flowerpots, jardinieres, crocks, jars, churns, etc. A number of potters make a higher grade product of stoneware, but the majority of these use imported clays. Sanitaryware is made at St. Johns, Que., and other points; but the raw material, including clays and feldspar, is nearly all imported.

The total value of the production of pottery and clay sanitaryware in 1912, according to returns received, was \$427,089, of which it is estimated that the value of \$383,134 is attributable to imported clays. The total value of the production in 1911 was reported as \$439,264, of which a value of \$336,771 is credited to imported clays. The large falling off in Canadian production in 1912 is chiefly due to the destruction by fire of the large pottery works in Quebec. Annual statistics of production are shown herewith.

<sup>\*\*</sup> Preliminary.

<sup>(</sup>b) Drain pipes, sewerpipes, and earthenware fittings therefor, chimney linings, or vents, chimney tops and inverted blocks, glazed or unglazed.

Calendar Year.	Value.	Calendar Year.	Value.	Calendar Year.	Value.

1895		1904	140,000	1912	43,955
1896					

Details of the imports of earthenware and chinaware, showing the values imported and the countries of origin, have already been shown in the general table of imports.

The imports in 1912 were valued at \$3,094,956, as compared with a value of \$2,516,536 in 1911, and \$2,283,116 in 1910. These imports are subdivided into eight classes, and in 1912, include: brown or coloured earthenware, etc., \$62,161; C. C. or cream coloured ware, decorated, printed, or sponged, etc., \$291,804; demijohns, churns, or crocks, \$18,404; tableware of china, porcelain, white granite, etc., \$2,068,362; china and porcelain ware, N. O. P., \$71,751; tiles or blocks of earthenware, or stone prepared for mosaic flooring, \$160,082; earthenware tiles N. O. P., \$239,391; manufactures of earthenware N. O. P., \$183,001.

The imports in 1911 comprised: brown or coloured earthenware, etc., \$52,100; C. C. or cream coloured ware, decorated, printed, or sponged, etc., \$184,291; demijohns, churns, or crocks, \$4,933; tableware of china, porcelain, white granite, etc., \$1,718,582; china and porcelain ware N. O. P., \$62,025; tiles or blocks of earthenware or stone prepared for mosaic flooring, \$123,203; earthenware tiles, N. O. P., \$154,351; manufactures of earthenware N. O. P., \$217,051.

It will be observed that there has been a general increase in almost all classes of earthenware and chinaware imported. Great Britain is the principal source of the imports of this class of products, but quite large supplies are also obtained from the United States, Germany, France, Austria-Hungary, Japan, Belgium, and other countries.

Imports of Earthenware and Chinaware.

#### KAOLIN.

A production of kaolin is reported in Canada for the first time in 1912, the total sales being 20 tons, valued at \$160. This was obtained from the deposits located on parts of lots Nos. 4, 5, 6, 7, and 8 of range VI south, township of Amherst, Ottawa county, Que, which were opened up by the Canadian China Clay Company, of Montreal.

The plant for refining the clay is situated 2 miles from St. Remi d'Amherst, and 7 miles from Huberdeau, the terminus of the Canadian Northern Quebec railway—94 miles northwest of Montreal.

The following description of operations was published in last years' report:—

'Development work was begun by the present operators in June 1911, and the washing plant completed in April of 1912.'

'The clay is mined by digging, no drilling or blasting being necessary, trammed 600 feet to the plant, washed free from grit and allowed to settle. After the filter presses have extracted the surplus moisture, it is dried in the open air in stacks. Dry kilns are being built for drying in the winter and wet seasons. After drying it will be pulverized and bagged for shipment. It is expected that an immediate market will be found in the demand of the Canadian paper mills.'

The imports of china-clay ground and unground, into Canada during the twelve months ending December 31, 1912, were 18,332 tons, valued at \$127,402, or \$6.95 per ton, as against an importation of 18,819 tons, valued at \$125,768, or an average of \$6.68 per ton in 1911. Imports of china-clay in 1910 were valued at \$142,125, and in 1909, \$100,066. These figures indicate to some extent at least the present actual demand for this product. The imports of earthenware and chinaware were, however, valued at \$3,094,956 in 1912, and composed chiefly of tableware of china, porcelain, etc., showing the possibilities for the development of industries utilizing china-clays.

Kaolin or china-clay is also in considerable demand in the United States, the imports into that country in 1911 being valued at \$1,461,068.

The kaolin deposits of Amherst were first brought to the attention of the Department in 1894, when samples were submitted to the Geological Survey Museum by Mr. R. Lanigan, of Calumet, Que. In 1896, samples were sent to porcelain works at Trenton, N.J., and were very favourably reported upon, but no serious attempt to develop the property was made until the season of 1911.

<sup>&</sup>lt;sup>1</sup> A short description of the plant and property was published in the Canadian Mining Journal, July 1, 1912.

#### LIME.

In common with other materials of construction, the production of lime in Canada has been steadily increasing during the past few years. According to the returns received from the producers, the total production in 1912 was 8,475,839 bushels, this being the amount sold, or used (equivalent to about \$296,654 tons) and valued at \$1,844,849, or an average of 22 cents per bushel, or about \$6.25 per ton.

The production in 1911 was reported as 7,533,525 bushels (263,673 tons), valued at \$1,517,599, or an average of 20 cents per bushel, or \$5.75 per ton. The increase in production in 1912 was, therefore, 942,314 bushels, or about 12.05 per cent. Owing to the increased value per bushel in 1912, however, the increase in total value of production was over 21 per cent.

Returns were received from 78 active firms in 1912, as compared with 75 firms in 1911. The average number of men employed in 1912 was 1,103, and wages paid \$576,217, as against 1,056 men employed, and \$523,518 paid in wages in 1911. Statistics in respect to labour and wages in lime production, however, should be used with some dicrimination, as many firms producing lime are also engaged in the quarrying of stone for purposes other than lime-burning, and are unable to make separate reports as to labour employed. This is particularly evident in the record from Nova Scotia and New Brunswick, since for the first mentioned, the record includes only the labour employed at the kilns, while for the latter, quarry costs are also included.

The average price per bushel of lime sold in 1912 varied from the minimum of 17 cents in Ontario, with a maximum of 36 cents in Saskatchewan. In 1911 the range was from a minimum of 16 cents in Ontario, to a maximum of 34 cents in British Columbia.

Hydrated lime is produced by a few firms only, including Messrs. Wright & Company, Hull, Quebec; Standard Lime Company, Limited, Joliette, Quebec; Gaspard Defond, St. Cuthberts, Quebec; and The Standard White Lime Company, Limited, Guelph, Ontario. The Pacific Lime Company, Limited, also reports that a hydrator is being installed at their plant at Blubber Bay, B.C.

The total production of hydrated lime in 1911 was reported as 5,023 tons, the production in 1912 is not available owing to the neglect of one firm to report the quantity produced.

A small quantity of lime is annually made in Prince Edward Island. The production is shown separately in 1911 and 1912, but for previous years is included in the Nova Scotia figures.

Exports and Imports.—The value of the lime exported during the calendar year 1912 was \$35,097, the destination being mainly the United States. In 1911 the exports were valued at \$39,536. The imports of lime during the calendar year 1912 were 329,925 barrels (32,992 tons) valued at \$207,481, or an average of 63 cents per barrel, or \$6.29 per ton, and were derived chiefly from the United States. The imports during 1911 were 228,538 barrels (22,853 tons) valued at \$161,985, an average of 70 cents per barrel, or \$7.08 per ton.

Annual statistics of exports and imports are given in the next two tables.

It will be observed that the Provinces of Ontario and Quebec, being the chief centres of population in Canada, are the largest producers of lime, the former contributing in 1912, 31 per cent of the total value, and the latter 26 per cent. The production west of the great lakes has, however, been rapidly increasing, the western provinces accounting for nearly 28 per cent of the total in 1912, as against 14 per cent in 1908.

49509-21

Statistics of the annual production of lime in Ontario, as published by the Ontario Bureau of Mines, since 1896, are shown in the next table. For the years previous to 1910 these returns are slightly higher than those obtained by the Mines Branch.

## Annual Production of Lime in Ontario.

(As ascertained by the Ontario Bureau of Mines.)

Calendar Year.	Bushels.	Value.	Cents per bushel.	Calendar Year.	Bushels.	Value.	Cents per bushel.

<sup>\*</sup> Provisional.

According to trade papers quotations on lime in Toronto during 1912 were as follows: in the city per 100 lbs. f.o.b. cars 35 cents, at kilns outside the city f.o.b. cars 23 to 25 cents per 100 lbs., hydrated lime (imported) at warehouses \$10 per ton.

The duty on lime is provided under item 711 of the Customs tariff and is 20 per cent under the general tariff, 17½ per cent under the Intermediate tariff. and 15 per cent under the British Preferential tariff.

### SAND-LIME BRICK.

The manufacture of sand-lime, or silica brick in Canada, is a comparatively new industry, and the first returns of production were obtained for the year 1907, when there was a production by 10 firms, amounting to 16,492,971 brick, valued at \$167,795. In 1912 the number of firms has doubled, and the production is now nearly six times what it was in 1907, the production during the past year being reported as 96,448,402 brick, valued at \$1,020,386, or an arrange of \$10.58 per thousand.

In 1911, sixteen firms reported a production of 51,535,243 brick, valued at \$143,427, an average value of \$8.58 per thousand.

Annual statistics of production since 1907 are shown below.

#### Annual Production of Sand-Lime Brick.

Calendar Year.	No. of firms reporting.	Number sold.	Value.	Per M.	
			\$	S ets.	
907	10	16,492,971	167,795	10 17

The following is a list of manufacturers of sand-lime brick reporting to the Department:—

#### Completed plants :-

The Canada Brick Co., Limited, Montreal, Transportation Building.

The Schultz Bros. Co., Limited, Brantford, Ont.

The Jno. Mann Brick Co., Limited, Brantford, Ont.

The Silicate Brick Co. of Ottawa, Limited, Ottawa, Ont.

The Peterboro Sandstone Brick Co., Limited, Peterborough, Ont.

Toronto Brick Co., Limited, 64 Wellington St. W., Toronto, Ont.

Canada Sand-Lime Pressed Brick Co., 1661 Dundas St., Toronto, Ont.

Harbour Brick Co., Limited, 50 Front St. E., Toronto, Ont.

The Wilcox Lake Brick Co., Toronto, Ont.

The Port Arthur Sand-Lime Brick Co., Port Arthur, Ont.

The Brandon Sandstone Co., Limited, Brandon, Man.

Manitoba Pressed Brick Co., Limited, 215 McIntyre Block, Winnipeg, Man.

Winnipeg Sandstone Brick Co., 410 Builders' Exchange, Winnipeg, Man.

The Birds Hill Sandstone Brick Co., Limited, Builders' Exchange, Winnipeg, Man.

Moosejaw Pressed Brick Co., Moosejaw. Sask., High St. E.
Interocean Pressed Brick Co., Regina, Sask., Box 424.
The Saskatoon Brick & Supply Co., Limited, Saskatoon, Sask.
Calgary Silicate Pressed Brick Co., Calgary, Alta.
The Hardstone Brick Co., Limited, Edmonton, Alta.
The Alsip Brick & Supply Co., Limited, Edmonton, Box 1769.
Vancouver Pressed Brick and Stone Co., Limited, 145 Front St. W., Vancouver, B.C.

Victoria-Vancouver Lime and Brick Co., Victoria, B.C.

## Plants under construction:

The British Columbia Pressed Brick Co., Vancouver, B.C.

The York Sandstone Brick Co., Limited, 27 Montague Place, Toronto, (care of G. Martin).

The Rideau Silicate Co., Ottawa, care of H. P. Brumell, Buckingham, Que. The Prince Albert Sandstone Brick Co., Prince Albert, Sask.

#### SAND AND GRAVEL.

Previous to 1912 no attempt had been made by this Department to obtain complete or comprehensive statistics of the production of building sand, or of gravel in Canada.

For the year 1912, however, a beginning has been made in the collection of these statistics, although the record is far from being complete, owing to many correspondents neglecting to furnish us with the information asked, and also incomplete lists of producers. The partial returns received showed a production in Quebec valued at \$243,126, Ontario, \$363,668, Manitoba, \$101,653, Saskatchewan, \$255,453, Alberta, \$148,704, British Columbia, \$385,946. The record for the Maritime Provinces was particularly meagre, returns being received only to the extent of \$13,549, making a total value of \$1,512,099.

With the beginning that has been made, however, it may be expected that the record for succeeding years will be much more complete. The business of obtaining and supplying sand and gravel has become well organized in many districts and large companies are now engaging in the industry, particularly in the vicinity of the larger cities.

Statistics of the exports and imports of sand and gravel have appeared in the annual reports of the Department of Customs, and the following tables show the compilation of this record since 1893.

During 1912 there was exported from Canada 660,090 ton; of sand and gravel, valued at \$459,952; while during the same year there were imported 553,721 tons, valued at \$445,781.

#### SLATE.

There is a small annual production of slate in Canada, obtained from the New Rockland quarries in Melbourne township, Richmond county, Quebec, operated by Messrs. Fraser & Davies. During the past year this firm has also been opening up and installing machinery at a quarry at Botsford, in Temistouata county. The production in 1912 is reported as 1,894 squares, valued at \$8,939. The quarries in Richmond county have been operated for many years and at one time there was a production valued at upwards of \$100,000 per year.

Statistics of annual production are shown herewith.

No exports of slate have been reported since 1901.

The imports of slate have ranged in value during the past seven years from \$100,000 to \$200,000 per annum. The total value of imports during the calendar year 1912 was \$200,643, comprising: roofing slate, \$88,911; school writing slate, \$39,858; slate pencils, \$6,978; other slates and manufactures of, \$65,896. The total value of the imports during the calendar year 1911 was \$169,685, and included: roofing slate, \$83,075; school writing slate, \$35,049; slate pencils, \$6,036; other slates and manufactures of, \$45,525. The imports of roofing slate, school writing slate, and manufactures of slate, N. O. P. are chiefly from the United States.

Some roofing slate is also imported from Great Britain, while slate pencils come chiefly from Germany and the United States. Imported roofing slate from Bangor, Maine, is quoted in Toronto f.o.b. cars, at \$6.75 per square of 100 feet, and mottled and green slate at \$8 per square.

# Statistics of imports and exports are shown in the following tables:-

## Imports of Slate During the Years 1910, 1911, and 1912.

#### STONE.

Statistics of stone production given herewith include the sales of all classes of stone used for building, monumental, and ornamental purposes, stone for paving purposes, curbstone, and flagstone, rubble, rip-rap, and crushed stone, limestone for furnace flux, sugar factories, etc.; but stone used for burning lime or the manufacture of cemen't is not included.

The kinds of stone quarried have been classed as granito (including trap rock, syenite, and other ignaceous rocks), limestone, sandstone, and marble.

The records are practically confined to quarry operations and the production of sawn or polished stone when these operations are carried on by the quarry operators. In addition to this production of stone by regular operators, there is no doubt a large stone production by individuals, such as farmers and others, for house or barn foundations, concrete work, etc., of which it would be impracticable to obtain any satisfactory record. Much stone is also used in railway construction work and in road building, of which the record is probably very incomplete.

It is impossible, except in a few cases, to show the quantity of stone production, so that the value only of the shipment can be given.

The total value of the production of stone in 1912, according to returns received, was \$4,726,171, as compared with a value of \$4,328,757 in 1911, showing an increased production of \$397,414, or 9.2 per cent.

The number of active firms reporting in 1912 was 192, the total number of men employed 5,710, and the total wages paid \$2,918,116. In 1911 the number of active firms reporting was 191, the number of men employed 5,437, and wages paid \$2,500,005.

Of the total value of the 1912 production, limestone contributed \$2,762,936 or 58.5 per cent; granite, \$1,373,119, or nearly 29 per cent; sandstone, \$329,352, or 7.0 per cent; and marble, \$260,764, or 5.5 per cent.

Stone was used for building purposes to the value of \$1,452,157 or 30.7 per cent of the total, monumental and ornamental stone, a value of \$190,359 or 4 per cent; curb, paving, and flagstone, \$268,390, or 5.7 per cent; rubble, \$353,871, or 7.5 per cent; crushed stone, \$1,987,073, or 42.1 per cent; and furnace flux, 904,528 tons, valued at \$474,321, or 10.0 per cent.

By provinces, Quebec again shows the largest output, having a value of \$1,337,703, or 41:4 per cent of the total, being made up of limestone to the value of \$1,187,751, granite valued at \$522,114, marble, \$247,838. Ontario takes second place with a production of \$1,109,164, or 23.5 per cent of the total, of which limestone is credited with \$862,052; granite, \$174,946; sand-

stone, \$59,240, and marble, \$12,926. British Columbia ranked third in order of importance, with a total of \$779,611, including: granite \$624,178; sandstone, \$99,816; limestone, \$55,617. The production in Manitoba was valued at \$383,095, made up of limestone, \$381,572, and granite, \$1,523. The Nova Scotia production was valued at \$324,630, comprising: limestone, \$275,944; granite, \$28,041, and sandstone, \$20,645. The Alberta production was reported as \$81,391, all sandstone. New Brunswick is credited with \$90,577, made up chiefly of sandstone and granite.

Exports and Imports.—The exports of stone from Canada in 1912 were valued at \$33,242, as against \$28,335 in 1911, and \$27,571 in 1910. The principal item in the export of stone during the past three years, has been building stone unwrought, of which the exports in 1912 were 108,516 tons, valued at \$28,795. The exports of dressed stone in 1912, including both ornamental and building stone, were valued at \$2,621 only.

The exports of the several classes of stone during the past three years, as shown by the Customs record, was as follows:—

Exports of Stone During the Calendar Years 1910, 1911, 1912.

	1910.		191	1911.		1912.

The imports of stone are classified as building stone of all kinds, except marble, manufactures of granite and other stone, and marble and its manufactures. The total value of the imports during the calendar year 1912 was \$1,467,143, as compared with a value of \$1,140,846 in 1911, showing an increase of \$326,297, or about 29 per cent. Of the total imports in 1912, \$563,672 in value was classed as building stone, and included \$117,037 worth of rough stone, and \$451,635 worth of dressed stone. The imports of sawn granite, manufactures of granite, and manufactures of stone N. O. P. were valued at \$245,333, paving blocks, \$64,053; marble and manufactures of, \$475,926. There was also an importation of refuse stone amounting to \$265,270 tons, valued at \$113,159.

The total value of the imports from the United States in 1912 was \$1,240,264; Great Britain, 182,496; from Italy, \$18,616; and from other countries, \$25,767.

The total value of the imports of stone during the calendar year 1911 included: building stone, valued at \$392,868; manufactures of granite, \$207,836; paving blocks, \$64,676; and marble, \$384,252. Of the total value \$946,624 was imported from United States; \$175,169 from Great Britain; \$6,334 from Italy, and \$12,719 from other countries. During both years the imports were derived chiefly from the United States and Great Britain, the United States supplying building stone, paving blocks, and marble principally; and Great Britain mainly manufactures of granite. Marble is obtained also in some quantity from Italy and other countries.

#### GRANITE.

The production of granite, including trap-rock, syenite, etc., in 1912, according to returns received from 57 active firms ireporting, is valued at \$1,373,119, as compared with a production in 1911 by 47 firms, valued at \$1,119,865, showing an increased production in 1912 valued at \$253,254, or 52-6 per cent. There was a falling off in the production of granite for building and ornamental purposes, but an increased production of paving stone, rubble, and crushed stone.

The largest production is reported from British Columbia in 1912, the value from this Province being \$624,178, as against \$460,851 in 1911. The value of the production in Quebec in 1912 was \$522,114, as against \$462,678 in 1911. Ontario produced granite to the extent of \$174,946 in 1912, as compared with \$131,816 in 1911. There was apparently little change in the Maritime Provinces. Much of the rough stone quarried in New Brunswick as well as stone imported from Redbeach, Maine, and Mt. Johnston, Quebec, is worked up into finished ornamental and monumental stone at mills at St. George, N.B. The value of the finished stone produced at St. George in 1912 was \$32,935, as against a value of \$86,658 produced in 1911.

<sup>\*\*</sup> Including refuse stone.

Statistics of the production by provinces for 1912 and 1911, showing the purposes for which the stone was sold, and the annual total production since 1886, are given in the following tables:—

#### Value of Granite Production by Provinces, 1912.

#### LIMESTONE.

The statistics given herewith do not include the value of the stone burned into lime by the quarry operators, nor that of the stone used in the manufacture of cement, a record of lime and cement production being separately given. With this exception the total value of limestone in Canada in 1912 was \$2,762,936, as compared with a value of \$2,594,926 in 1911, or an increase of about 7 per cent.

There was an increase in the production of crushed stone, furnace flux, limestone for building and ornamental purposes, but a decrease in the production of paving stone and rubble.

The production during 1912 of limestone for building purposes was valued at \$743,679, as against \$664,148 in 1911. The value of crushed stone in 1912 was \$1,274,577, as against \$1,066,559 in the previous year. Curbstone and paving blocks were produced to the value of \$13,561 in 1912, as compared with \$36,902 in 1911. The value of the rubble in 1912 was \$256,793 as against \$374,327 in 1911. The production of furnace flux was 904,528 tons, valued at \$474,321, as compared with \$74,224 tons, valued at \$452,990 in 1911.

#### MARBLE.

From 1886 to 1896 there was a small production of marble, aggregating, however, only \$45,837 in value for the eleven years. During the next eleven years—1897 to 1907—there is no record of any production. But the opening up of the quarries at Philipsburg, Que., by the Missisquoi Marble Company, Limited, together with the development of quarries in Ontario and British Columbia, has resulted in a considerable production of marble during the past five years. The total value of the production in 1912 was returned as \$260,764, as compared with \$162,783 in 1911 and \$158,779 in 1910.

Marble quarries were operated during 1912 at Philipsburg and South Stukely, Que., Dungannon and Hungerford townships in Ontario.

The value of the Quebec production was \$247,838, as compared with \$135,187 in 1911 and \$151,000 in 1910. Ontario produced marble to the value of \$12,926, as against \$25,996 in 1911 and \$4,100 in 1910. There was no production reported from British Columbia in 1912—the value of the production in 1911 was \$1,600, as compared with \$3,679 in 1910.

Annual Production of Marble.

Calendar Year.	Tons.	Value.	Calendar Year.	Tons.	Value.
		8			\$
1886	501	9,900	1895	200	2,000
887	242	6,224	1896	224	2,405
888	191	3,100	1897 to 1907 inclusive	Nil	Nil
889	83	980	1908		125,000
890	780	10,776	1909		158,441
891	240	1.752	1910		158,779
892	340	3,600	1911		162.78
893	590	5.100	1912		260.754
894	Nil	Nil			=.50,1

The imports of marble during the calendar year 1912 were valued at \$475,976, as compared with \$384,252 in 1911, and \$267,215 in 1910.

The annual imports of marble since 1880, are shown in the general table of imports covering the fiscal years, on page 60.

#### SANDSTONE.

The value of the production of sandstone in 1912 is reported as \$329,352, as compared with a value of \$451,183 reported for 1911. The greater part of the sandstone quarried is used for building purposes, though some quantities are used for rubble and paving purposes.

Of the production in 1912, building and ornamental stone was sold to the value of \$260,229, or 79 per cent of the total value of production. There was included in this amount, rough stone valued at \$96,877 and dressed stone valued at \$163,352. Of the 1911 production the value of \$391,784 was credited to building and ornamental stone, and included \$36,503 in rough stone and \$305,282 in dressed stone.

Statistics of the production in 1910, 1911, and 1912 are shown in the next three tables.
