Vol. 7—No. 4

QUARTERLY PRODUCTION OF PROCESSED FOODS

December, 1953.

All manufacturers of the main processed food items report their production quarterly, and the present release contains data, by quarters for the years 1951, 1952 and 1953.

Although exact agreement between the Quarterly and Annual Census of Industry data is not available, coverage in both series is now correlated and the Quarterly may be considered as a useful indicator of production trends available considerably in advance of the more detailed Annual figures. To bring the Historical Quarterly data into line the 1951 Quarterly series shown in the present report has been revised to agree in total with the Annual. Although 1952 Annual totals are not yet available, the coverage in both series has in the past proven to be approximately the same and there should be no important revisions of the quarterly figures in the future.

In order to provide comparisons for some of the major items on production previous to 1951, subscribers are referred to pages 14 and 15 of this publication wherein will be found indexes of Fourth Quarter production based on the Fourth Quarter of 1949=100. It is felt that this table which was instituted in the March 1953 issue will be of considerable help and interest to subscribers. Each quarterly publication will carry the quarterly indexes for the quarter which is at that time being published, and therefore, by referring to a year's supply, records on production indexes can be obtained for all quarters from 1949 to date.

On page 13, is shown the Provincial distribution of production for the Fourth Quarter of 1953 for some of the larger items. It is hoped that this table although not as broad in scope as the index table will provide valuable information for those who seek to know the Provincial distribution of production.

The last page of the report contains an alphabetical index of all the items contained herein and should provide a ready reference in locating items as desired.
