Vol. 8, No. 2

## QUARTERLY PRODUCTION OF PROCESSED FOODS

June, 1954

All manufacturers of the main processed food items report their production quarterly. The present release contains data, by quarters, for 1952, 1953 and the first and second quarters of 1954. The data for 1952 has been revised and agrees in total with the annual Census of Industry data for that year. The information for 1953 and the first two quarters of 1954 are preliminary and subject to revision. However, in the past it has proven that our coverage in both series has been correlated so that the preliminary information available in the quarterly publication may be considered a useful indicator of production trends, available considerably in advance of the more detailed annual Census of Industry figures.

It should be noted that since the publication of the previous quarter quite a few revisions have occurred in the biscuits and confectionery section. The items affected were chocolate bars, chocolates boxed and packaged and chocolate moulded novelties. These revisions were necessary in order to correct a reporting error of one of the manufacturers concerned. Revisions of this nature very seldom affect the production figures for the year which has been revised to agree with the annual Census of Industry data. Understandably, revisions in the preliminary information will take place from time to time but it is hoped and felt that such revisions will not be too great in number.

In order to provide comparisons for some of the major items, subscribers are referred to pages 15 and 16 wherein will be found indexes of production for the second quarter based on the second quarter of 1949=100. These indexes instituted in the March 1953 publication will show from time to time all revisions made and it is felt that the tables will be of considerable help and interest to all subscribers.

A list of products contained in this publication will be found on page 17 and it is hoped that the inclusion of this alphabetical index will assist subscribers in locating specific data more readily.
