This report is designed in such a way as to show the disposition of a crop of tobacco from the time that it is harvested by the growers until its final disposition by the manufacturers in the form of cigarettes, cigars, etc. It must be borne in mind that flue-cured tobacco must be subjected to an extended curing period and therefore the tobacco recorded as processed during any quarter represents a replacement of matured tobacco used in the manufacture of cigarettes, cigars, etc.

Table 1 shows the acreage, production and value of the leaf tobacco by five-year averages for the years 1966-1974 and annually from 1970-1975, by main types, to provide background data against which the rest of the report may be reviewed.

Table 2 shows the supply and disposition of tobacco leaf during the quarter under review by the leaf tobacco processors.

The reporting form which the processors were asked to complete is of the "Self-balancing" type and follows the formula: opening inventories, plus production, less sales, equals closing inventories. To account for the processors interchange of tobacco we have added to the "Supply" side, the item, "Purchases from other Canadian processors" but this item is offset by the subtraction of the item, "Sales to other Canadian processors" and these two items thus become self-cancelling, however, "Time-lag" may distort this relationship.

The item "Sales to Canadian manufacturers" as recorded in this table, should correspond to the item of "Domestic purchases" as shown in Table 3. However, "Time-lag" may distort this relationship on transactions occurring at or near the end of a quarter.

Table 3 shows the supply and disposition of tobacco leaf during the quarter under review by the tobacco products manufacturers.

Here, too, the reporting forms were of the "Self-balancing" type.

In theory the imported tobacco shown in this table should correspond with the data on imports as reported in "Imports by Commodities", Statistics Canada Catalogue 65-007 but again, time-lag may distort this relationship.

Table 4 shows the total inventories of tobacco held by both the leaf processors and the tobacco products manufacturers and includes both domestic and imported tobaccos, but excludes tobacco held in bond in Canada.

Table 5 shows the imports of tobacco into Canada as reported in "Imports by Commodities", Statistics Canada Catalogue 65-007.

Table 6 shows the export of tobacco from Canada as reported in "Exports by Commodities", Statistics Canada Catalogue 65-004. In theory the exports shown in this table should correspond with exports as reported in Table 2 but, as is the case with imports, time-lag may temporarily distort this relationship.

Table 7 shows the production of tobacco products, by months.

La présente publication est conçue de manière à refléter les diverses étapes par lesquelles passe le tabac depuis sa récolte par les producteurs jusqu'à son écoulement final par les fabricants sous forme de cigarettes, cigares, etc. Il importe de retenir que le tabac blond doit être soumis à une longue période de séchage et que par conséquent le tabac déclaré comme conditionné pendant un trimestre représente le remplacement du tabac mûri utilisé dans la fabrication de cigarettes, cigares, etc.

Le tableau 1 indique les moyennes quinquennales pour les années 1966-1974 et les chiffres annuels pour les années 1970-1975 de la superficie, de la production et de la valeur des récoltes de tabac en feuilles, suivant les principaux genres; on a ainsi des données de base facilitant la comparaison avec les autres chiffres du bulletin.

Le tableau 2 montre les disponibilités et l'écoulement de tabac en feuilles au cours du trimestre étudié, suivant les déclarations des conditionneurs de tabac en feuilles.

La formule de déclaration que les conditionneurs ont eu à remplir se balance automatiquement, selon la formule suivante: stock du début, plus la production, moins les ventes, égalent les stocks de fin d'exercice. Pour tenir compte des échanges entre conditionneurs, nous avons ajouté aux "disponibilités" le poste "Tabac acheté à d'autres conditionneurs canadiens", mais ce poste est compensé par la soustraction du poste "Ventes à d'autres conditionneurs canadiens", ce qui fait que les deux s'annulent l'un l'autre, toutefois, le décalage peut fausser ce rapport.

Le poste "Ventes aux fabricants canadiens" inscrit dans ce tableau doit correspondre au poste "Achats au Canada" inscrit au tableau 3. Toutefois, le décalage peut fausser ce rapport dans le cas des opérations qui ont lieu en fin de trimestre.

Le tableau 3 montre les disponibilités et l'écoulement de tabac en feuilles au cours du trimestre à l'étude, suivant les déclarations des fabricants de produits du tabac.

Ici, également, les formules de déclaration se balancent automatiquement.

En principe, le tabac importé et inscrit dans ce tableau doit correspondre aux données sur les importations de la publication "Importations par marchandises", Statistique Canada n° 65-007 au catalogue mais encore une fois, le décalage peut fausser ce rapport.

Le tableau 4 donne le total des stocks de tabac détenu tant par les conditionneurs de tabac en feuilles que par les fabricants des produits du tabac et comprend les tabacs canadiens aussi bien qu'importés, mais non le tabac sous entrepôt de douane au Canada.

Le tableau 5 montre les importations de tabac canadien suivant les chiffres de la publication "Importations par marchandises", Statistique Canada n° 65-007 au catalogue.

Le tableau 6 montre les exportations de tabac canadien suivant les chiffres de la publication "Exportations par marchandises", Statistique Canada n° 65-004 au catalogue. En principe, les exportations indiquées dans ce tableau doivent correspondre aux exportations déclarées au tableau 2, mais, comme dans le cas des importations, le décalage peut temporairement fausser ce rapport.

Le tableau 7 montre la production de produits du tabac, par mois.
