## PUBLICATIONS

The results of the annual Census of Industry are published by the Dominion Bureau of Statistics in a series of industry reports which are released each year as the compilations are completed. Reports for industries in the **Foods, Beverages and Tobacco** Major Group are listed below, along with current and annual publications of related interest. Similar reports are issued for other industries. A complete catalogue of publications of the Bureau is available on request from the Information Services Division, Dominion Bureau of Statistics, Ottawa, or from the Queen's Printer, Ottawa.

32-217	Stocks of Food Commodities in Cold Storage and Other Warehouses .....	.50		32-014	Quarterly Stocks and Consumption of Unmanufactured Tobacco .....	.50	2.00
32-218	Fruit and Vegetables Preparations Industry .....	.50		32-225	Tobacco and Tobacco Products Industries .....	.50	

**Note:** In addition, several special statements are available. These include Monthly Meat Products, Monthly Stocks of Canned Foods, Monthly Production of Alfalfa Meal, Quarterly Bread and Bakery Products, 20 Seasonal Commodity Reports of Canned Fruits and Vegetables including Irish Potatoes.

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Information Services Division, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

## EXPLANATORY NOTES

This report is one in a series of about 130 publications which present the results of the 1959 Census of Manufactures. Most reports in this series refer to specific industries, but there are summary reports for Canada and the provinces and for major industry groups. An annual Census of Manufactures has been carried out by the Dominion Bureau of Statistics since 1916.

Industry statistics given in these reports refer to number of establishments, employees, salaries and wages, cost of materials, supplies, fuel and electricity, gross value of shipments, inventories and value added by manufacturing. Details of materials used and products shipped are also given. Descriptions of the principal industry statistics, with special reference to 1959 are as follows:

### Period Covered

Firms are asked to submit figures for the calendar year, if at all possible, and most reports are on this basis. Financial year reports for periods differing from the calendar year are accepted in instances where the firms find it impossible to supply calendar year data from accounting records. However the data on employees, salaries and wages are requested on a calendar year basis in all cases.

### Establishment

Data for the annual census is collected on an establishment basis. A firm with more than one plant is required to file a report for each plant. In most cases an establishment is a complete factory. Sometimes, however, a plant is divided into two or more establishments when it carries out operations classifiable to different industries and when separate accounting records are available. Usually the statistics for an establishment relate only to the manufacturing activities. Other activities such as construction at the plant by its own employees, wholesale or retail activities carried on at the plant location, etc., are not included. Plants engaged solely in repair work (except in the case of furniture, shipbuilding, boat building, aircraft and railway rolling stock industries) are not included but plants occupied in assembling parts into complete units are included.

### Employees

Administrative and office employees include all executives and supervisory officials such as presidents, vice-presidents, secretaries, treasurers, etc., together with managers, professional and technical employees, superintendents and factory supervisors above the working foremen level and clerical employees. Working owners and partners are also included in this category.

Production and related workers include all other factory workmen whether paid on a monthly, weekly, hourly or piece-work basis. Working foremen doing work similar to that of the employees they supervise are included, as are maintenance, warehousing and delivery staffs. Employees on new construction work, in retail or wholesale operations, on outside piece work etc., are not included.

Production workers are reported by months, an average for the year being obtained by summing the monthly figures and dividing by twelve. This procedure is followed even though the plant did not operate in all months. Figures on employment refer to calendar years whether or not some establishments reported other data on a financial year basis.

### Salaries and Wages

Salaries and wages refer to gross earnings of the employees described above, including salaries, wages, commissions, bonuses, the value of room and board where provided, deductions for income tax and social services such as sickness and unemployment insurance, pensions, etc., as well as any other allowances forming part of the employees' wages. Payments for overtime are included.

Salaries refer to amounts paid to administrative and office employees. Withdrawals by working owners or partners for normal living expenses for self and family are included but not their withdrawals for income tax. Wages refer to the amounts paid to production and related workers as defined above. Data on earnings refer to the calendar year whether or not some establishments reported other data on a financial year basis.

### Cost of Fuel and Electricity

Figures for fuel refer to amounts actually used, (including fuel used in cars and trucks), not to purchases unless the quantities are the same. Values refer to the laid-down cost at the works, including freight, duty, etc.

### Materials and Supplies Used

Figures represent quantities and laid-down cost values, at the works, of materials and supplies actually used during the year whether purchased from others or received as transfers from other plants of the reporting company. Amounts paid to other manufacturers for work done on materials owned by the reporting company are included. Returnable containers or any other items charged to capital account are not included. Fuels are not included. Goods bought from others or received as transfers from other plants of reporting companies for resale without further processing are not included. Maintenance and repair supplies not chargeable to capital account are included.

### Factory Shipments

Factory shipments refer to shipments of goods made from own materials either in the reporting plant or by other manufacturers on the basis of a charge to the reporting plant for work done. All products and by-products shipped from the establishment are included whether for domestic use, export, or for government departments. Transfer shipments to sales outlets, distributing warehouses or to other manufacturing units of the reporting firm are included. Goods bought or received as transfers and resold without further processing are not included. Values are computed on f.o.b. plant or

plant warehouse basis, and do not include sales tax or excise duties. Values of containers not returnable are included. Amounts received in payment for work done on materials owned by others are included.

In a few industries such as shipbuilding, aircraft, etc., where work on principal products extend over a relatively long period, the value of production is recorded rather than the value of shipments. For those industries production is computed from the value of deliveries of complete units during the year plus the value of work done during the year on unfinished units less the value of work done in previous years on finished units delivered in the year under review.

### **Inventories**

Values represent the book values of manufacturing inventories owned and held at the reporting plant. Figures include inventories held in warehouses or selling outlets which have been included with plant operations for purposes of reporting shipments.

### **Value Added by Manufacturing**

Figures are computed from value of shipments plus or minus changes in inventories of finished goods and goods in process less cost of materials, fuel and electricity. This figure is sometimes referred to as net production.<sup>1</sup>

### **Standard Industrial Classification**

The Standard Industrial Classification Manual, prepared by the Dominion Bureau of Statistics, provides for 135 three-digit industries in the manufacturing sector, arranged in 17 major groups. Reporting establishments are classified or allotted to specific industries on the basis of the value of principal products made or shipped.

### **Short Forms**

Between 1949 and 1957, in an effort to ease the reporting burden for smaller firms, a short form was used asking for the total value of shipments only or, in a few cases where losses of detail were significant, for quantities and values of principal products. For purposes of publication, missing data were estimated on the basis of appropriate ratios. In general the cut-off point for these short forms was set at \$50,000 value of shipments. About 40% of the total number of establishments reported on the short form and accounted for less than 3 per cent of the total value of shipments.

In 1958, in order to establish a new base year, the small firms were asked to report all items of principal statistics together with some detail on materials and products.

<sup>1</sup> To arrive at the National Accounts concept of "gross domestic product at factor cost", it would be necessary to subtract also the cost of office supplies used, advertising, insurance and other goods and services obtained from other businesses. Data on these inputs are not collected on the annual Census of Manufactures. Value added figures for "The primary industries and construction" are published in D.B.S. publication 61-202, *Survey of Production*.

For the 1959 Census, the short form was used again, but further steps were taken to ease the respondents' burden. First, the general limit for short forms was raised to \$100,000 value of shipments. In addition, a new intermediate form was developed. This form is a shortened version of the long form in that most of the general questions were pared down and the detailed lists of materials and products were limited to the more important items. The general limits for firms in this category were set at between \$100,000-\$500,000 value of shipments, but in the case of both the short and intermediate forms there were lower cut-offs for a number of industries in which the smaller firms accounted for a larger share of total shipments. On the other hand, limits were raised where this could be done without a significant loss of coverage. On most of the short forms for 1959, in addition to total value of shipments, data on principal products were requested. In a few industries, where loss of employment and earnings data were considered too large because of higher cut-offs, a question on total payroll was placed on the short form.

The intermediate and long forms provide complete data for the compilation of all elements of principal industry statistics and the details of materials and products. The one-page short form, although containing data on principal products and total value of shipments, does not request information on other elements of principal statistics such as value of inventories, materials, fuel and electricity and, in most cases, employment and salaries and wages, nor does it contain detailed data on volume and value of materials used. For purposes of compiling aggregates of principal statistics by industry and by geographic location, the missing data for each establishment were estimated for 1959 by using, in general, ratios based on the change in the value of shipments between 1958 and 1959. The proportion of the estimated data was generally less than 5 per cent of the total in each category of principal statistics.

The general request for the principal items of products on the short form for 1959 permitted a fairly complete compilation of the detailed quantities and values of commodity shipments. In the case of the detailed quantities and values of materials, fuel and electricity, however, and the monthly distribution of production workers, only the totals of data actually reported on the intermediate and long forms are contained in published reports and no attempt was made as in past years to estimate the generally small proportion of individual totals represented by detailed items omitted from the short forms.

The new approach has relieved an additional 12,000 establishments from filling out the regular long form. Establishments now receiving the short form number in excess of 20,000 and account for more than 54 per cent of the total number of establishments and a little more than 3 per cent of the total value of shipments.

## USE OF SHORT FORMS IN THE CARBONATED BEVERAGES INDUSTRY

1959

On page 4 under "Short Forms" may be found the historical background and functions of all types of modified forms used in the Bureau to alleviate the burden on smaller establishments of reporting detailed data on their operations annually. This was a description designed to cover the general principles involved in the use of modified forms for all industries. We shall now attempt to describe the manner in which these forms are employed in the Carbonated Beverages Industry and to assess the impact which their introduction has occasioned on the 1959 survey.

In this industry, short questionnaires were forwarded to all establishments whose value of shipments did not exceed \$100,000 annually; inter-

mediate forms to all with value of shipments between \$100,000 and \$200,000 and long forms to those whose value of shipments were generally in excess of \$200,000. This resulted in some loss of detailed quantities and costs of fuel and electricity and in the monthly distribution of production worked in the short and intermediate reports received. In addition, short reports gave no details of materials used but these were specified on the intermediate.

Nevertheless, because of the small percentage of total shipments which establishments reporting on modified forms represent, the final results were not affected to a significant degree. This may be illustrated in tabular form as follows:

Establishments reporting on	Number of establishments	Percentage of total number of establishments	Value of factory shipments	Percentage of total value of factory shipments
Long forms .....	182	34.8	132,063,025	81.8
Intermediate .....	129	24.7	18,797,608	11.7
Short forms .....	212	40.5	10,473,803	6.5
<b>Total establishments .....</b>	<b>523</b>	<b>100.0</b>	<b>161,334,436</b>	<b>100.0</b>

As the above table<sup>1</sup> demonstrates, while 65.2 per cent of the establishments in the industry qualified for the use of modified forms, their com-

bined value of shipments was only 18.2 per cent of the total. Moreover, the establishments on short forms (the only ones omitting details of materials used) had aggregate shipments valued at only 6.5 per cent of the total. Hence, it is evident that the use of modified forms could have little effect on the final results.

<sup>1</sup> See Table 4, page 10, for "Principal Statistics classified according to Size of Establishments".

THE CARBONATED SODA INDUSTRY

CHAPTER I  
GENERAL INTRODUCTION

The carbonated soda industry is one of the most important and rapidly growing industries in the world. It is a highly competitive industry, and the leading producers are the United States, Germany, and France. The industry is characterized by a high degree of concentration, with a few large firms dominating the market. The production of carbonated soda involves the use of natural soda ash, which is mined in various parts of the world. The soda ash is then processed into soda ash, which is used in the production of carbonated soda. The carbonated soda is then bottled and distributed to consumers.

The carbonated soda industry has a long history, dating back to the early 19th century. It was first developed in Europe, and then spread to the United States. The industry has grown steadily over the years, and is now one of the largest and most profitable industries in the world. The demand for carbonated soda is increasing rapidly, and this is expected to continue for many years to come. The industry is facing a number of challenges, including increasing competition from other soft drink manufacturers, and the need to reduce costs and improve efficiency. However, the industry is well-positioned to meet these challenges, and is expected to continue to grow and prosper in the years ahead.

Year	Production (Millions of Cases)	Consumption (Millions of Cases)	Exports (Millions of Cases)	Imports (Millions of Cases)

# THE CARBONATED BEVERAGES INDUSTRY

1959

## (AERATED WATERS)

The Carbonated Beverages Industry performs two distinct industrial operations, viz., the manufacture of syrups or concentrates for use in making soft drinks, and bottling operations where the syrups or concentrates are combined with carbon dioxide gas and water then bottled for distribution. Firms in this industry may carry on these operations in varying degrees, although the greatest number of plants are bottlers only, and are usually located in urban areas where distribution presents fewer problems.

Since 1949, the volume output of the industry increased 56.4 per cent. Based on total shipments of Carbonated Beverages from all industries and total population in Canada as of June 1 respectively, the per capita disappearance of commercially produced beverages (excluding those produced at fountains) rose from 7.5 gallons to 9.0 gallons in 1959. Increases are also recorded to volume and value of shipments as well as labour, materials used and fuel and electricity.

The value of shipments (exclusive of sales tax) for all products in 1959 was \$161,334,436 an increase of 6.9 per cent over the previous year. Salaries and wages amounted to \$27,622,253 almost 8 per cent higher than 1958, while cost of materials used increased by 4.8 per cent. Value added by manufacture rose almost 8 per cent to 110 millions.

The principal commodity shipped is, of course, "soft drinks" which amounted to over 115 million cases in 1959 with a factory selling value of over 139 million dollars. This was an increase of 7.5% in volume and of 6.1% in value. This Industry also produces concentrates, syrups and extracts, etc., for use mainly within the industry.

In addition to the aerated waters produced in Carbonated Beverages Industry there were 2,210,066 gallons valued at \$2,145,836 produced in the Brewing Industry.

Value added by manufacture (net value) is shown in Table 1, column 6. From 1944 to 1952, the value added by manufacture is computed by subtracting the cost of materials used and cost of fuel and electricity from value of production. In 1953 value of shipments was used since value of production could not be ascertained. In 1954 and 1955 value of production was computed by using the value of shipments plus or minus the increase or decrease in finished goods inventory. For 1956 and later years, the change in "Goods in process" inventory was also taken into account.

The following summary, using the change in the value of inventories, is given to show how "Value added by manufacture" was determined in this period.

Year	Value of factory shipments	Change in inventory	Value of production	Cost of materials	Cost of fuel and electricity	Value added by manufacture <sup>1</sup>
thousands of dollars						
1951 <sup>2</sup> .....	—	—	90,514	33,195	2,186	55,132
1952 <sup>2</sup> .....	—	—	105,050	35,845	2,270	66,936
1953 .....	108,560	—	—	35,493	2,571	70,496
1954 .....	108,159	+ 46	108,205	33,721	2,886	71,597

TABLE 2. Inventory Values, 1959

Provinces	Raw materials and supplies	Goods in process	Finished goods of own manufacture	Total inventory
	dollars			
Opening inventory:				
Newfoundland .....	239,739	295	58,608	298,642
Prince Edward Island .....	18,934	—	1,544	20,478
Nova Scotia .....	156,993	38	36,995	194,026
New Brunswick .....	138,361	908	20,910	160,179
Quebec .....	2,215,798	33,490	395,574	2,644,862
Ontario .....	2,419,558	14,028	921,677	3,355,263
Manitoba .....	244,688	1,690	53,359	299,737
Saskatchewan .....	127,636	—	56,166	183,802
Alberta .....	236,481	7,196	56,914	300,591
British Columbia, Yukon and Northwest Territories.....	377,864	3,374	91,915	473,153
<b>Canada .....</b>	<b>6,176,052</b>	<b>61,019</b>	<b>1,693,662</b>	<b>7,930,733</b>
Closing inventory:				
Newfoundland .....	232,778	306	25,058	258,142
Prince Edward Island .....	16,521	—	1,931	18,452
Nova Scotia .....	188,567	52	40,262	228,881
New Brunswick .....	163,824	1,375	23,762	188,961
Quebec .....	2,520,222	25,949	434,183	2,980,354
Ontario .....	2,334,302	16,100	934,515	3,284,917
Manitoba .....	252,882	2,227	62,163	317,272
Saskatchewan .....	140,996	—	56,027	197,023
Alberta .....	215,097	10,260	77,685	303,042
British Columbia, Yukon and Northwest Territories.....	371,254	4,572	98,585	474,411
<b>Canada .....</b>	<b>6,436,443</b>	<b>60,841</b>	<b>1,754,171</b>	<b>8,251,455</b>

Note: The opening inventory values for 1959 differ from the closing inventory values for 1958 due to transfers, discards, corrections, and addition of new firms.

TABLE 3. Principal Statistics classified according to Number of Employees per Establishment, 1958 and 1959

<sup>1</sup> In 1952 and previous years the basis of collection was "Production".

<sup>2</sup> Estimated from 96,120,771 cases.

TABLE 9. Materials Used in the Carbonated Beverages Industry, 1958 and 1959

Materials	1958		1959	
	Quantity	Cost at plant	Quantity	Cost at plant
	lb.	\$	lb.	\$
Carbon dioxide gas, in cylinders, tanks, etc.....	14, 823, 020	1, 261, 878	17, 543, 151	1, 357, 187
Carbon dioxide, solid.....	1, 627, 191	100, 872	662, 132	41, 884
Sugar.....	176, 280, 764	14, 594, 257	177, 490, 483	12, 890, 602
Glucose.....	—	—	—	—
Citric acid.....	837, 767	264, 192	970, 100	273, 657
Tartaric acid.....	26, 345	9, 971	27, 716	12, 991
Syrups, concentrates and flavours.....	—	17, 331, 696	—	17, 288, 259
Cartons, labels, crowns, corks, caps, etc.....	—	7, 974, 436	—	8, 086, 198
All other materials, including chemicals.....	—	1, 228, 402	—	5, 280, 750
Operating, maintenance and repair supplies, except fuel..	—	2, 170, 873	—	1, 814, 405
Amount paid out to others for work done on materials owned by this plant.....	—	116, 372	—	181, 151
<b>Totals<sup>1</sup></b> .....	—	<b>45, 052, 949</b>	—	<b>47, 227, 084</b>
New bottles purchased during year.....	—	7, 447, 236	—	7, 991, 595
New wood cases purchased during year.....	—	1, 346, 956	—	1, 729, 916

<sup>1</sup> Does not include office supplies which amounted to \$382,212 in 1958 and \$336,591 for 1959.

Note: No detailed information on materials used, was collected from firms generally reporting value of shipments of less than \$100,000. The total estimated value of materials used by these firms (excluding estimates made for CO<sub>2</sub> gas) was \$3,917,988, and this amount is included in "All other materials".

TABLE 11. Production Workers, by Months, 1959

	Establishments reporting monthly detail <sup>1</sup>		Establishments reporting quarterly detail <sup>2</sup>	
	Male	Female	Male	Female
January .....	3,099	188		
February .....	3,068	190		
March .....	3,118	195	595	71
April .....	3,279	205		
May .....	3,617	206		
June .....	3,922	222	738	84
July .....	4,014	236		
August .....	3,991	220		
September .....	3,577	198	666	77
October .....	3,382	178		
November .....	3,338	196		
December .....	3,391	184	608	72
Average for establishments reporting monthly detail .....			3,476	201
Average for establishments reporting quarterly detail .....			641	74
Average estimated for small establishments <sup>3</sup> .....			534	38
Average for all establishments .....			4,651	313

<sup>1</sup> The number of production workers, by months, was collected only for establishments generally reporting value of shipments of \$200,000 and over.

<sup>2</sup> The number of production workers, by quarters, was collected only for establishments generally reporting value of shipments between \$100,000 and \$200,000.

<sup>3</sup> For establishments generally reporting value of shipments of less than \$100,000, no data on number of workers were collected. Reported value of payrolls was used in conjunction with estimated average earnings to arrive at average number of production workers.

TABLE 12. Consumption of Fuel and Electricity, 1959

Kind	Quantity	Cost at plant
		\$
1. Establishments reporting commodity detail: <sup>1</sup>		
Bituminous coal:		
(a) From Canadian mines .....	ton	2,481
(b) Imported .....	"	2,150
Sub-bituminous coal (from Alberta mines only) .....		—
Anthracite coal .....	ton	42
Lignite coal .....	"	1,617
Coke .....	"	143
Gasoline (including gasoline used in cars and trucks) .....	Imp. gal.	4,966,528
Fuel oil including kerosene or coal oil .....	"	3,842,115
Wood .....	cord	839
Gas:		
(a) Liquefied petroleum gases .....	Imp. gal.	31,567
(b) Other manufactured gas .....	M cu. ft.	209
(c) Natural gas .....	Mcf.	111,439
Other fuel .....		—
Electricity purchased .....	kwh.	23,888,296
Steam purchased .....		—
2. Establishments reporting group detail: <sup>2</sup>		
Cost of fuel .....	...	605,952
Cost of electricity .....	..	87,950
3. Estimate for establishments for which no data were collected: <sup>3</sup>		
Cost of fuel and electricity .....	...	501,709
4. All establishments:		
Total cost of fuel and electricity .....	...	4,026,083

<sup>1</sup> Establishments generally reporting value of shipments of \$200,000 and over.

<sup>2</sup> Establishments generally reporting value of shipments between \$100,000 and \$200,000.

<sup>3</sup> Establishments generally reporting value of shipments of less than \$100,000.
