REPORT ON THE PRODUCTION OF PROCESSED CHEESEIN CANADA, 1932

The kind of cheese termed "Processed" cheese is made from ordinary Cheddar cheese and the process is stated to consist of grinding the cheese, heating it in a jacketed container with agitation, and filling it into the proper receptacles, either directly or with specially designed machinery. It is placed on the market in conveniently sized packages of one half pound and one quarter pound.

Returns of the production of Processed cheese were collected from the manufacturers by the Dominion Bureau of Statistics for the first time in 1924, and in 1925 an inquiry was added to the schedule which asked for the quantity of the product exported. In 1925 the total output of Processed cheese amounted to 32,652,569 pounds, of which 21,381,532 pounds were exported. The production of this kind of cheese has declined since that year, dropping to 15,386,617 pounds in 1927, increasing in 1928, but falling to 10,714,514 pounds in 1932. The quantity exported in 1932 was 980,981 pounds.

The following table gives statistics of production and exports in the years 1924 to 1932, and appended is a list of the manufacturers of Processed cheese:
