DEPARTMENT OF TRADE AND COMMERCE DOMINION BUREAU OF STATISTICS GENERAL MANUFACTURES BRANCH OTTAWA - CANADA

Dominion Statistician: Chief, General Manufactures Branch: A. Cohen, B.Com.

CANNED FOOD PRODUCTION IN CANADA, 1934 and 1935.

The development in the production of canned foods in Canada showed a remarkable expansion since the beginning of the twentieth century. In 1900 the total value did not exceed \$8,250,000, whilst in 1930 it had increased to more than \$55,000,000 or six and one half times as much. In 1933 the value of production dropped to \$33,000,000, and rose again to \$45,000,000 in 1935. The principal commodities used in the canning industry are: fish, fruits and vegetables, milk and meats, whilst the industry itself forms an adjunct of considerable importance to other industries, notably the tin can industry, the wooden box industry and the paper and printing industries. The development of the canned foods trade has effected great changes in the relation of foods to seasons. Fruits and vegetables of many kinds are to be had at all times of the year, not always with all the flavour of the freshly gathered product, but with much of their original freshness and flavour. The producers in the country are provided with an enormously extended market, and the consumer in both city and country with cheap and wholesome food in great variety. The consumer also enjoys protection by frequent inspection under the "Meat and Canned Foods Act, 1907" and subsequent amendments, administered by the Health of Animals Branch of the Federal Department of Agriculture.

The principal statistics of establishments primarily employed in the production of canned foods for the calendar years 1934 and 1935 are presented in the following summary table. It should be remembered that the statistics in this table are for all products and by products of the several industries shown. The figures of production, therefore, are not comparable with those shown elsewhere in this report.

Imports and Exports

Imports of canned foods in the calendar year 1935 amounted to \$2,684,149, mostly of fruit and vegetables not grown in Canada by reason of climatic conditions.

Exports of canned foods, the produce of Canada, during 1935 amounted in value to \$16,975,636, of which canned fish totalled \$10,475,278 and concentrated milk products \$2,247,075.

The following table summarizes the imports and exports of canned foods by classes and value for the calendar years 1929 to 1935.

CANNED FOOD PRODUCTION IN CANADA, 1934 and 1935.

FISH CANNING

The principal varieties of fish used in Canadian canneries are in order of their importance: salmon, lobsters, sardines, herring, clams, haddock and pilchards.

Salmon Canning: - The salmon canning industry is practically confined to the Province of British Columbia, and dates as far back as 1876 when the initial pack was 9,847 cases, drawn wholly from the Fraser River area. Ten years later the pack had increased to 161,264 cases, and again in 1896 to 601,570 cases. In 1926 the pack had further increased to 2,065,190 cases, constituting the second highest record pack for the industry, whilst in 1930 the pack had increased to 2,223,469 cases, the high record to date. In 1935 the pack amounted to 1,530,320 cases valued at \$9,663,305.

Every species of this kind of food fish (which, however, is not the salmo salar or true salmon) known to the waters of the Pacific is to be found on the British Columbia Coast — the sockeye, the spring, the cohoe, the pink and the chum salmon. Of these the sockeye, though not taken in such great numbers as the pinks and chums, is by far the most important, owing to its abundance, its deep red colour and its excellent texture which have created so keen a demand in British and foreign markets. The Fraser River, which had for years been the chief source of supply, has now yielded place to the Skeena River and adjacent waters. The remaining species are all marketable in quality though not commanding the high place attained by the sockeye. A table showing the annual pack since the beginning of the industry is appended. A variation in the quantity of the pack will be noted, the maximum being reached in about every fourth year.

Annual Pack of Salmon, 1376 to 1935. ... (Concluded)

Lobster Canning: ... Next to salmon canneries of the Pacific Coast comes the lobster canning industry of Nova Scotia, New Brunswick, Prince Edward Island and Quebec. The industry dates from 1370 when the Province of Nova Scotia produced 30,000 cans and New Brunswick 20,000 cans. In the following year a factory was started in Prince Edward Island with an initial pack of 6,711 cans. The growth of the industry in over sixty years is indicated by the output of the 304 factories operating in Canada in 1935. Prince Edward Island with 89 factories produced 25,170 cases valued at \$556,596. Nova Scotia with 77 factories produced 46,863 cases valued at \$1,021,258. New Brunswick with 86 factories produced 18,275 cases valued at \$404,260, and Quebec with 52 factories produced 9,597 cases valued at \$213,519. or a total pack in 1935 of 99,905 cases worth \$2,195,633. Large quantities of canned lobster are exported annually to Great Britain, the United States and France. A table showing the annual pack of lobsters from 1897 to date follows: --

Annual Pack of Lobsters, 1897 to 1935. - (Concluded).

Sardine Canning: - The industry is confined almost wholly to the Province of New Brunswick. The name of sardine as applied to the Canadian fish is not the true one; as the fish used in the canneries of New Brunswick are the young of the herring. The first mention of a sardine industry in Canada so far as is known dates back to sometime in the late sixties. Although there are but three canneries operating, they are of large capacity, and the total pack in 1935 amounted to 338,436 cases valued at \$1,180,111. The remainder of the catch -- 112,458 barrels, valued at \$155,687 -- was sold as fresh and salted, and went chiefly to United States' factories for canning. The imports of canned sardines in 1935 amounted to \$359,966 and came principally from Norway. Exports to the value of \$448,150 were reported in 1935, principally to British Dominions and dependencies. The season for taking this fish extends from April 1st to December 31st. A table showing the annual pack of sardines from 1917 to date is appended.

CANNED FOOD PRODUCTION IN CANADA, 1934 and 1935.

Clam and Other Canneries: - There is also a considerable pack of fish of other varieties, the principal items in 1935 being: herring with 38,893 cases valued at \$165,763, clams and quahaugs 29,883 cases worth \$117,353, haddock 19,741 cases valued at \$83,498, pilchards 27,184 cases worth \$82,991, and miscellaneous kinds of canned fish 16,279 cases valued at \$84,493. The exports of some of these kinds in 1935 were as follows: herring \$109,928, pilchards \$45,577, and clams \$4,893. A statement showing the quantity of clams and quahaugs packed annually since 1917 is herewith presented.

FRUIT AND VEGETABLE CANNING

The canning of fruits and vegetables is carried on most extensively in the Provinces of Ontario, British Columbia and Quebec, where climatic conditions are favourable for the growing of fruits and vegetables. The principal fruits canned in Ontario are: apples, pears, plums, peaches, cherries, currants, gooseberries, blueberries, raspberries and strawberries. In addition, British Columbia has the apricot and the loganberry. The vegetables canned include: tomatoes, peas, corn, beans, beets, carrots, pumpkin, squash, spinach and asparagus. The canning season begins in June and continues through the summer and autumn until October, being at its height in July, August and September. The pack in 1935 consisted of 1,825,613 cases of fruits and 6,602,822 cases of vegetables, valued at \$4,757,301 and \$12,101,138 respectively. Of the canned vegetables packed, peas ranked first with 1,988,383 cases. Tomatoes with 1,564,932 cases came next, followed in order by cream of corn with 1,212,256 cases, baked beans 1,103,698 cases, green or wax beans 364,657 cases, etc. Of the fruits canned, pears came first with 463,609 cases, followed by peaches with 444,006 cases, apples and apple sauce 245,243 cases, cherries 199,994 cases, plums 118,737 cases, etc. Other important canned products are: soups of all kinds 1,603,685 cases and tomato juice 795,691 cases.

Imports and exports of canned fruits and vegetables during the calendar years 1934 and 1935 are summarized in the following tables as far as the classification of these commodities permit.

Table showing Exports of Canned Fruits and Vegetables, Calendar Years 1934 and 1935. - (Concluded).

MEAT CANNING

The canning of meats, an adjunct of the great meat packing industry, is not as extensively carried on in Canada as are other sections of the canned foods group of industries, being more in the nature of a side line of the main industry. The total value of canned meats manufactured in Canada during the year 1935 was \$862,572. Imports of canned meats, poultry and game during the same period amounted to \$534,533, whilst exports of Canadian products totalled \$230,972. Closely allied to the canned meat industry is that of canned soups, the manufacture of which in the year mentioned totalled \$3,978,806, whilst imports were valued at \$5,403 and exports at \$953,598. It is interesting to note that imports of canned soups dropped from \$1,554,100 in 1930 to only \$5,403 in 1935.

CONCENTRATED MILK PRODUCTS

The concentrated milk products industry in Canada dates from 1883 when the first factory was established at Truro, Nova Scotia, by the Reindeer Condensed Milk Company. As the demand for prepared milk grew, other plants were established and other kinds of products added to the output. There are now in Canada twenty one plants, the list of principal products including condensed milk, evaporated milk, skim milk powder, buttermilk powder and casein.

The value of concentrated milk products in Canadian factories as first reported in the decennial census of 1891 was \$83,000. In 1901 the value had increased to \$269,520, in 1906 to \$855,409 and in 1910 to \$1,814,871. The value of production in recent years as given in the following table shows the rapid advancement made by this industry.

| Year | Value of Products | Year | Value of Products |
|------|-------------------|--|-------------------|

CONSUMPTION OF CANNED FOODS IN CANADA, 1934 AND 1935.

The value of canned foods available for consumption in Canada for the calendar years 1934 and 1935 is shown by classes in the following summary table. Consumption figures are usually computed by adding together the values of manufactures and imports and deducting therefrom the value of exports.

| Classes of Canned Foods | Value of | Value of | Value of | Value available for Consumption | | |
|---------------------------------|------------------------|-----------|-----------------|------------------------------------|------------|------|
| classes of camea roods | Manufactures | Imports | Exports | Total | Per Capita | |
| | \$ | \$ | \$ | \$ | \$ | |
| Canned fish 1934 | 14,205,665 | 713,018 | 9,129,954 | 5,788,729 | .53 | |
