Vol. 2—Part III—S-1

NOTICE

The annual reports prepared by the Industry and Merchandising Division of the Bureau of Statistics are divided into 3 volumes, as follows: **Volume I** — The Primary Industries, including mining, forestry and fisheries; **Volume II** — Manufacturing; **Volume III** — Merchandising and Services. The volumes are made up of parts, and the parts in turn are subdivided according to the industries or provinces which they comprise.

Volume II consists of the following parts, the first two of which deal with manufacturing as a whole and the balance with the major manufacturing groups.

- I — General Review of the Manufacturing Industries
- II — The Manufacturing Industries of Canada, (7 sections, as follows:)
 - Section A. Summary for Canada
 - Section B. Atlantic Provinces
 - Section C. Quebec
 - Section D. Ontario
 - Section E. Prairie Provinces
 - Section F. British Columbia
 - Section G. The Manufacturing Industries of Canada,
Regional Distribution
- III — Foods and Beverages
- IV — Tobacco and Tobacco Products
- V — Rubber Products
- VI — Leather Products
- VII — Textile Mills
- VIII — Knitting Mills
- IX — Clothing
- X — Wood and Paper Products
- XI — Printing Trades
- XII — Iron and Steel Products
- XIII — Transportation Equipment
- XIV — Non-ferrous Metal Products
- XV — Electrical Apparatus and Supplies
- XVI — Non-metallic Mineral Products
- XVII — Products of Petroleum and Coal
- XVIII — Chemicals and Allied Products
- XIX — Miscellaneous Manufactures

The present report belongs in Part III, Foods and Beverages. It is punched to permit of filing in a ring binder along with others of the group. The reports in this group are:

- A — General Review
- B — The Slaughtering and Meat Packing Industries
- C — The Dairy Products Industry
- D — The Fish Processing Industry
- E — The Fruit and Vegetable Preparations Industry
- F — The Flour Milling Industry
- G — The Prepared Breakfast Foods Industry
- H — The Feeds Industry
- I — The Biscuit Industry
- J — The Bread and Other Bakery Products Industry
- K — The Carbonated Beverages Industry
- L — The Distilling Industry
- M — The Brewing Industry
- N — The Wine Industry
- O — The Confectionery Industry
- P — The Sugar Refining Industry
- Q — The Macaroni and Kindred Products Industry
- R — The Miscellaneous Food Preparations Industry
- S — The Canned Foods Summary

Prices of most reports released after January 1, 1959 have been increased. Information on the new prices of particular issues is available on request from the Information Services Division of the Dominion Bureau of Statistics.

THE CANNED FOODS SUMMARY 1957

The Canned Foods Summary is an annual report combining production statistics from all sources of foods packed in cans or other air-tight containers. The items include food products such as meat, fish, fruits, vegetables, juices, concentrated milk, etc., but do not include canned beverages, dog food, etc.

Since the introduction, about 150 years ago, of canning as a method of food preservation, food processors have constantly sought to improve their production, not only through new and improved methods but also by adding to the variety of foods which may be successfully canned. The canning industry is of great importance economically as it gives work to nearly thirty thousand people annually. Related fields of transportation, merchandising, etc. employ many more workers proportionately. The commercial canning of foods has saved housewives many hours of needless toil and has helped keep the food budget within reasonable bounds. In addition, the canning industries are important from the standpoint of nutrition. Throughout the whole year, it is now possible to enjoy canned

foods with much of the flavour and all of the nourishment of fresh-cooked good. The consumer is protected by the inspection services of the Department of Agriculture and the Department of Fisheries, Ottawa.

The commodities included here have been collected on the basis of "factory production" up to 1953. Beginning with 1954, however, all industries except Fish Processing have reported on a "factory shipments" basis. In 1936 value of production totalled 60,020 thousand dollars and has increased almost without interruption until 1957 when the value of factory shipments totalled 370,287 thousand dollars. Volume of production has also increased during this twenty-year period.

The tables in this bulletin give volume and value of production or shipments of foods canned in Canada, as well as imports and exports of similar commodities. Tables 15 and 16 show per capita consumption of various canned foods from 1942 to date.

TABLE 1. Gross Value of Production of Principal Canned Foods, 1936-1957¹

Note: The values given here correspond to the quantities given in Table 2.

¹ Includes Newfoundland beginning 1951, except canned fish.² Includes meat, chicken, ready dinners, and meat pastes.³ Includes juices, pie fillings, jams, mincemeat, etc.⁴ Increased production in 1952 is due to government controlled canning programme.⁵ These figures represent "shipments" instead of "production", except canned fish.

Imports and Exports

Imports of canned foods during 1957 were valued at 64,261 thousand dollars. Fruits not grown in Canada or grown only in limited areas by reason of climatic conditions form the most important items of import, e.g., pineapple, apricots. For the same reason citrus fruit juices are being imported in increasingly large quantities.

The exports of canned foods during 1957 amounted to 30,655 thousand dollars with canned fish, canned meat, and concentrated milk products making up nearly 91% of this amount. The following table summarizes the imports and exports of canned foods by groups for significant years from 1939 to 1957.

TABLE 3. Imports of Canned Foods, Calendar Years 1939-1957

	Canned fish	Canned fruits	Canned vegetables	Canned meats	Soup and soup preparations	Miscellaneous canned foods	Concentrated milk products	Total

Fish Canning

The principal varieties of fish used in Canadian canneries are, in order of their importance: salmon, sardines, lobsters, herring, and clams.

Salmon Canning—The canning of salmon in Canada is an industry confined almost wholly to the province of British Columbia, where this river-spawning fish of the Pacific coast is taken in abundance. Annual records of the salmon pack extend to 1876, when the number of cases was 9,847. The annual pack in recent years has, with few exceptions, exceeded a million cases, and in each of four years (1926, 1928, 1930 and 1941) was more than two million cases. The pack of 1957 totalled 1,424,794 cases, valued at \$35,301,002. Under regulations made by Order in Council of April 4, 1932, canned

salmon shipped out of the province must be inspected and graded according to quality, and each can must carry a letter representing the species of salmon.

Every species of salmon known to the waters of the Pacific is to be found on the British Columbia Coast—the sockeye, the spring, the coho, and pink and the chum salmon. Of these, the sockeye, though not taken in such great numbers as the pinks and chums, is by far the most important, owing to its abundance, its deep red colour and its excellent texture which have created so keen a demand in British and foreign markets. The chief sources of supply are the Fraser River; the Skeena River and other northern waters. The remaining species are all marketable in quality though not commanding the high prices reached by the sockeye.

TABLE 8. Production of Canned Salmon in Canada, 1876-1957

Lobster Canning—The lobster is found in Canada in Atlantic Coast waters only, and the lobster canning industry is confined to the eastern Maritime Provinces, with Prince Edward Island as the chief producer. The annual pack of lobster in the early years of the present century frequently exceeded two hundred thousand cases, but in recent years, the output has been below that figure, the trend being towards the sale of lobsters "in shell" to the United States market. In

1957 the pack of lobster was 36,730 cases, and the value amounted to \$3,632,555.

In order to conserve the fisheries the Government prohibits the capture of lobsters of less than a fixed minimum size, and also makes provision for the closing to lobster fishing of such areas and for such periods in each year as may be deemed advisable.

TABLE 10. Production of Canned Lobsters, 1897 to 1957

Year	Cases of 48 pounds	Year	Cases of 48 pounds

Sardine Canning—Sardine is the name given to the young herring that is used for canning. New Brunswick produces almost the entire Canadian pack of canned sardines and in that province it is the leading fishing industry. The number

of sardine canneries is small, but those in operation are of large size. In 1957 the pack totalled 736,702 20 pound cases valued at \$5,650,500. There is an important market abroad for Canadian sardines, and large quantities are exported annually.

Fruit and Vegetable Canning

The canning of fruits and vegetables is canned on most extensively in the provinces of Ontario, British Columbia and Quebec, where climatic conditions are favourable for the growing of fruits and vegetables. The canning season begins in June and continues throughout the summer and autumn until

October, being at its height in July, August and September. For detailed statistics of factory shipments of canned fruits and vegetables, by provinces, see Table 6. Production of similar commodities by geographical areas are given in Table 7.

Meat Canning

The total value of canned meats shipped from packing plants in Canada during 1957 was \$36,976,611, the most important items being ham and spiced pork. Meat canning is carried on most extensively in the Prairie Provinces where abundant grazing land affords feed for large herds of cattle, and the large grain crops provide feed for hogs. Large meatpacking plants have been built in Alberta and Manitoba, and the canning of meat is becoming an increasingly important sideline to the main packing industry.

In 1952 there was a tremendous increase in canned meat production owing to the outbreak early in the year of the foot-

and-mouth disease. Since the United States immediately imposed restrictions on the importation of Canadian livestock and meat products, a surplus was built up which threatened the economic stability of the industry. The Federal Government adopted emergency control measures in an effort to offset this surplus. Under these measures meat packers canned the surplus and this was held under Government control to be released for domestic consumption or export as the opportunity arose.

At the end of 1952 slaughtering of hogs for the government canning programme was terminated and the production of canned meats soon returned to normal. See Tables 1 and 2.

Concentrated Milk Products

The concentrated milk products industry in Canada dates from 1883 when the first factory was established in Truro, Nova Scotia, by the Reindeer Condensed Milk Company. As the demand for prepared milk grew, other plants were established and other kinds of products added to the output. There are now in Canada thirty-three plants, the list of principal products including condensed milk, evaporated milk, skim milk powder, buttermilk powder and casein.

The value of concentrated milk products in Canadian factories as first reported in the decennial census of 1891 was \$83,000. In 1901 the value had increased to \$269,520 in 1906 to \$855,409 and 1910 to \$1,814,871. The value of production for the years 1917-1957 is given in the following table.

TABLE 14. Production of Concentrated Milk Products, 1917 to 1957

Consumption of Canned Foods in Canada, 1942 to 1957

The following table gives the per capita consumption in Canada of various canned foods. The method of arriving at consumption figures is shown in detail for 1956 and 1957. All

figures given are for calendar year, except production of apple products.

TABLE 16. Per Capita Consumption of Canned Foods, 1942-1955
