THE FLOUR AND FEED MILLING INDUSTRIES IN CANADA, 1943.

To permit a closer analysis of the flour and feed milling industries, this report is divided into three sections. Section 1 comprises a general summary of the industry as a whole. Section 2 deals with the mills whose principal output is flour and other edible cereal products, whilst Section 3 is devoted to the mills whose operations are mostly confined to the production of chopped grain and other feeds.

SECTION 1. -- GENERAL SUMMARY

A review of the flour and feed milling industries during the year 1943 reveals a decrease of 40 in the number of mills reporting, with a marked increase in all of the other items comprising the principal statistics. These are shown in Table 1, for the Dominion for the years 1931 to 1941 and by provinces for the years 1942 and 1943.

The flour milling industry operated at a very high level of production in 1943. The output of flour amounting to 23,986,769 barrels was the highest on record and represents an increase of 3,866,987 barrels or 19 per cent over the 1942 output. There was also an increase of 220,658 tons in the production of chopped feed; 137,043 tons in bran, shorts and middlings; and 65,571 tons in stock and poultry feeds. The output of rolled oats and oatmeal, however, declined by 13,675 tons. All told there was an increase of about 17 per cent in the physical volume of production. The increase in production is also reflected in an increase of 443 in the number of persons employed and \$1,239,185 in the salaries and wages paid. The increase in the gross value of production amounting to \$41,663,620 or 26.1 per cent is mainly due to the increase in the physical volume of production, as the selling values at the mill of the products made advanced only moderately, as the following table shows:

Product	Unit	Selling Values	
		1942	1943
		\$	\$
Wheat flour, all grades	Barrel	4.28	4.68
Oatmeal and rolled oats	Ton	71.33	72.45
Bran, shorts and middlings	"	25.60	24.84
Feed, chopped	"	32.04	33.82
Stock and poultry feeds	"	43.55	46.23

This industry, which has existed to meet the domestic needs for more than 300 years, is one of the Dominion's oldest manufactures, but it is only within recent times that its progress has become spectacular. The war of 1914-1918 and the demand it created gave a great impetus to this trade. The 260 flour mills, many of them of the most modern type and highest efficiency, have a capacity far in excess of

THE FLOUR AND FEED MILLING INDUSTRIES IN CANADA, 1943.

Canada's demands. During 1928 productive capacity reached about 121,000 barrels per day. Since then the industry has been adversely affected by the difficulties which beset the Canadian grain trade and the great decline in the prices of grains. Exports of wheat flour declined from 10,737,266 barrels in 1928 to 3,911,886 barrels in 1938, but in spite of this decrease, Canada continued to be one of the leading exporters of wheat flour. A further impetus was given the industry as a direct result of the large import requirements of Great Britain and other allied countries during the present war. Exports of wheat flour to all countries jumped accordingly to 12,896,995 barrels in 1943. The great demand of Canadian flour in foreign markets was a great boon to Canadian agriculture, in as much as it enabled flour mills to make available large quantities of mill feeds which otherwise would not have been produced. Farmers were thus enabled to obtain sufficient feeds needed by them in order to fulfill the large commitments made for export shipments of cheese and bacon.

Production. - The total value of all products of the two industries in 1943 amounted to \$201,127,291 of which wheat flour was accountable for \$112,345,014. Next in order of importance was chopped grain feed with a total of \$47,251,873 followed by shorts and middlings to the extent of \$12,148,950. Prepared Stock and poultry feeds takes fourth place with \$11,508,843 whilst Bran occupies fifth position with a valuation of \$8,045,780. The output of wheat flour of all grades in 1943 totalled 23,986,769 barrels valued at \$4.68 per barrel. This represents an increase of 3,866,987 in the number of barrels produced and an increase of 40 cents in the selling price per barrel as compared with 1942.

Capital. - The capital employed in these industries represented an investment of \$70,869,815 which was divided as follows; fixed capital - consisting of present value of land, buildings, fixtures, machinery, tools, etc., - \$29,870,156 and working capital which comprises inventory value of materials on hand, stocks in process, finished products on hand, etc., \$29,572,802 and cash, bills and accounts receivable \$11,426,857.

Employees, Salaries and Wages. - The administrative and clerical work in connection with the two industries required the services of 1,725 male and 493 female employees whose total salaries amounted to \$3,375,757. The number of wage-earners employed was 4,691 male and 254 female which necessitated a payroll amounting to \$6,639,981.

Cost of Materials. - The total cost of all materials in both industries, including containers, amounted to \$169,488,522. Wheat of all types was by far the largest contributor to this sum with \$106,116,003. Mixed grain for chopping takes second place with \$25,704,793. The next largest item of expense was that of containers and container materials which accounted for \$13,233,048 whilst oats occupy fourth position with a total cost of \$10,003,080.

THE FLOUR AND FEED MILLING INDUSTRIES IN CANADA, 1943.
