Price 25 cents

Vol. 2-Part III-F-1

#### NOTICE

The annual reports prepared by the Industry and Merchandising Division of the Bureau of Statistics are divided into 3 volumes, as follows: Volume I — The Primary Industries, including mining, forestry and fisheries; Volume II — Manufacturing; Volume III — Merchandising and Services. The volumes are made up of parts, and the parts in turn are subdivided according to the industries or provinces which they comprise.

Volume II consists of the following parts, the first two of which deal with manufacturing as a whole and the balance with the major manufacturing groups.

I-General Review of the Manufacturing Industries. \$1.50

II - The Manufacturing Industries of Canada, (7 sections, as follows:)

Section A. Summary for Canada, 25¢

Section B. Atlantic Provinces, 25¢

Section C. Quebec, 25¢

Section D. Ontario, 25¢

Section E. Prairie Provinces, 25¢

Section F. British Columbia, 25¢

Section G. The Manufacturing Industries of Canada, Regional Distribution, 75¢

III-Foods and Beverages

IV - Tobacco and Tobacco Products

V-Rubber Products

VI-Leather Products

VII - Textiles

VIII - Wood and Paper Products

IX-Printing Trades

X-Iron and Steel Products

XI-Transportation Equipment

XII - Non-ferrous Metal Products

XIII - Electrical Apparatus and Supplies

XIV - Non-metallic Mineral Products

XV-Products of Petroleum and Coal

XVI-Chemicals and Allied Products

XVII-Miscellaneous Manufactures

The present report belongs in Part III, Foods and Beverages. It is punched to permit of filing in a ring binder along with others of the group. The reports in this group are:

A-General Review, 25¢

B-The Slaughtering and Meat Packing, and Sausage and Sausage Casings Industries, 25¢

C-The Dairy Products Industry, 25¢

D-The Fish Processing Industry, 25¢

E-The Fruit and Vegetable Preparations Industry, 25¢

F-The Flour Milling Industry, 25¢

G-The Prepared Breakfast Foods Industry, 25¢

H-The Feeds Industry, 25¢

I-The Biscuit Industry, 25¢

J-The Bread and Other Bakery Products Industry, 25¢

K-The Carbonated Beverages Industry, 25¢

L-The Distilling Industry, 25¢

M-The Brewing Industry, 25¢

N-The Wine Industry, 25¢

O-The Confectionery Industry, 25¢

P-The Sugar Refining Industry, 25¢

Q-The Macaroni and Kindred Products Industry, 25¢

R-The Miscellaneous Food Preparations Industry, 25¢

S-The Canned Foods Summary, 25¢

### THE FLOUR MILLING INDUSTRY

#### 1953

This industry, which has existed to meet domestic needs for more than 300 years, is one of the Dominion's oldest manufactures, but it is only within recent times that its progress has become spectacular. Approximately one hundred mills, many of them of the most modern type and of the highest efficiency, have a capacity far in excess of Canada's demands.

The war of 1914-1918 and the demand it created gave a great impetus to this trade. During 1928 productive capacity reached about 121,000 barrels per day. During the depression the industry was adversely affected by the difficulties which beset the Canadian grain trade and the great decline in the prices of grains. Exports of wheat flour declined from 10,737,266 barrels in 1928 to 3,911,886 barrels in 1938, but in spite of this decrease, Canada continued to be one of the leading exporters of wheat flour. A further impetus was given to the industry as a direct result of the large import requirements of Great Britain and other allied countries during the last war. Exports of wheat flour to all countries which averages about 14,000,000 barrels during the war years decreased to 12,078,671 barrels in 1950 but increased to 13,246,269 barrels in 1952. The great demand for Canadian flour in foreign markets during the war years was a great boon to Canadian agriculture, inasmuch as it made it possible for flour mills to make available large quantities of mill feeds which otherwise would not have been produced. Farmers were thus able to obtain sufficient livestock feeds to fulfill Canada's commitments for the export of cheese and bacon.

Previous to the publication of this report, and in addition to the Breakfast Foods Industry, there were two annual publications dealing with grain mill products:

- (a) The Flour and Feed Milling Industries.
- (b) The Prepared Stock and Poultry Feeds Industry.

The first report mentioned above included separate statistical data on the Flour Milling Industry and analyzed in detail all those establishments which manufacture flour, In addition, these establishments manufacture any or all of the commodities usually associated with the feed industry. In the same report, a summary of the Feed Milling Industry, which included establishments that manufacture principally chopped grain feeds on a merchant or custom basis, was included. These establishments may have also produced prepared stock and poultry feeds, but if the volume of such prepared feeds exceeded four hundred tons, they were classified to the Prepared Stock and Poultry Feeds Industry.

The report on the Prepared Stock and Poultry Feeds Industry presented the detail of firms specializing in the manufacture of prepared stock and poultry feeds. These firms did not manufacture flour and their production of feeds had to be in excess of 400 tons. This group of establishments may have produced, at the same time, any other grain mill products.

Currently, it became necessary for the Bureau to publish data which would allow industry to assess what proportion of the livestock population the output of their plant was feeding. While this situation could not be met entirely, since feed production is spread over numerous industries, approximately 98 per cent by volume of all primary and secondary feeds could be presented in one report by removing feed milling establishments from the Flour and Feed Milling Industry and combining these with those of Prepared Stock of Poultry Feeds. Beginning in 1953, Reports on the grain milling industries are now published as follows:

- (a) The Flour Milling Industry includes all establishments which produce wheat flour in any quantity. Therefore it would necessarily include feeds in any form manufactured by these establishments, with one exception. Some of the larger milling companies which conduct separate feed milling divisions, provide two reports; one covering their flour milling activity and the second covering their feed production activities. In this latter case, the feed report is included in the Feeds Industry.
- (b) The Feeds Industry—This group includes all establishments which manufacture prepared feeds, chopped grain feeds on own account and carry on a service operation of custom milling and chopping. This group, however, does not include those establishments which manufacture flour and which may produce, in addition, prepared and chopped grain feeds. Historically, the Feed Milling Industry as it existed prior to 1953, has now been removed from its statistical association with flour milling and has been combined with the former Prepared Stock and Poultry Feed Industry. The industry will henceforth be referred to as the Feeds Industry.
- (c) The Breakfast Foods Industry includes all firms which manufacture prepared breakfast foods. The industry also includes some of the large flour milling companies which maintain separate foods divisions.

In 1950, the statistical treatment of the Flour Milling Industry and that of the Feed Milling Industry changed considerably, primarily in the treatment

of custom grinding and custom milling. Up to and including 1949, custom grinding and milling had been converted, for statistical purposes, to a merchant grinding and milling basis, whereby the volume of custom ground and milled grains was valued at the average cost of merchant grains reported. These two values were added to give the total gross value of shipments. In 1950, the method of estimating gross value was changed. Only the amount received for service rendered is considered as part of the gross value of shipments, no account being taken of the value of grains supplied for custom, Historically, principal statistics in Table 1 have been made comparable beginning with the 1953 report. It should be noted that this change in the statistical treatment does not affect the net value of production for the industry. The volume of grains used for custom chopping and milling, together with the custom charge are shown in Table 4, page 9.

The total value of all shipments of the Flour Milling Industry in 1953 amounted to \$266,430,548, a decrease of 2.9 per cent from \$274,208,040 recorded in 1952. It should be noted that five mills discontinued operations in this period, four in the province of Ontario and one in the province of Alberta.

Although some enriched flour had been produced in Canada previously for export, the general programme of enrichment first took place in 1953. Table 2 shows the production of enriched and non-enriched flour separately by types for Canada and the provinces for 1953.

Out of the total value of shipments of more than \$266,000,000 in 1953, the total value of the shipments of flour amounted to \$209,141,362. Next in importance were the shipments of more than \$38,000,000 worth of bran, shorts and middlings while certain types of specially prepared flour and milled products amounted to slightly over \$10,662,000. It should be noted that the shipments of Prepared Cake Mixes in this industry alone approached \$7,000,000 while the total value of shipments of Prepared Stock and Poultry Feeds including concentrates and custom milling and chopping approximated \$1,500,000.

While the value of wheat flour shipments from plant decreased 1.4 per cent in 1953 compared to 1952, the physical volume of shipments decreased .04 per cent in the same period. This indicates an increase in unit value.

There was no change in the number of workers employed in the industry in 1953 when 4,962 employees were reported compared with 4,961 in the previous year. Total salaries and wages for 1953 were approximately \$500,000 more than 1952 and and rose to \$14,946,310. Of total employment, 1,330 employees were used in the administrative and clerical end of the industry and drew about \$250,000 more than in 1952. The number of wage-earners was 3,632 and the industry paid them \$10,192,498 in wages, approximately the same amount of wages as were paid in 1952.

The total cost of raw materials amounted to \$224,518,387 in 1953. This includes the cost of grain, mill feeds, concentrates, vitamins and packing materials. Purchases of wheat amounted to slightly more than \$199,000,000 while the cost of containers and packing materials amounted to \$14,587,000. The next largest item of expense was that of oats which amounted to \$4,948,000 while other grains purchased including mixed grain for chopping amounted to approximately \$2,000,000.

Comparing some of the principal products of manufacture, it is noted that the volume of flour shipped showed a slight reduction to 23,445,532 barrels, about 50,000 barrels less than 1952. Exports of flour decreased slightly more than 2,000,000 barrels from 1952. Because of this drop in exports, the amount of all types of flour available for domestic consumption amounted to 12,302,151 barrels, an increase of approximately 2,000,000 barrels over 1952 and about 1,000,000 barrels more than 1951.

In 1953 the mills were requested to report their power equipment together with a breakdown of the fuel used. The results are shown in Tables 15 and 16 together with comparable figures for 1948, the last year these figures were collected.

TABLE 1. Principal Statistics for the Years, 1924-19531

<sup>1.</sup> Cost of materials used and selling value of shipments 1924 to 1949 have been revised to exclude the estimated value of the volume of grains handled in Custom Milling. Thus, data for 1949 and previous years have been made comparable to the new basis instituted in 1950 and used in succeeding years. This change in statistical treatment does not affect the net value of production for the Industry.

2. Gross value of production for 1951 and preceding years. The selling value of factory shipments was not introduced

until 1952.
