ARTIFICIAL AND REAL SILK INDUSTRY IN CANADA, 1941.

The silk industry in Canada is divided into two distinct branches - real silk and artificial silk - but, owing to the fact that the manufacture of the latter is largely concentrated in a few establishments, it is necessary to combine the statistics in order to avoid disclosing individual information. Production must be shown on rather broad lines, an example of which is the impossibility of giving a break-down of synthetic filament yarns into the fundamental types of viscose and acetate.

In 1941 reports were received from thirty establishments, three more than in 1940. Twenty-two of these establishments were located in Quebec and eight in Ontario.

Fabrics, yarns, threads and all other items manufactured in the artificial and real silk industry were produced to the value of \$41,549,845 in 1941, an increase of \$10,342,036 or 33.1 per cent as compared with the previous year. Employment was given to 10,140 persons in 1941, 1,628 or 19.1 per cent more than in 1940, and the payroll, \$11,005,770, represented an additional disbursement to salaried employees and wage-earners of \$2,248,296 or 25.7 per cent. Materials used cost \$15,855,842, an increase of \$4,192,834 or 35.9 per cent. Capital invested totalled \$42,690,766, and was greater by \$4,075,708 or 10.6 per cent than in 1940.

Fabrics woven entirely of continuous filament artificial silk yarns were the most important item produced, being manufactured to the extent of 50,086,500 yards valued at \$22,376,916 in 1941 as against 35,114,903 yards with a value of \$14,772,134 in 1941. Details of production are given in table 3, to which is appended a supplementary table showing the production of fabrics of artificial silk, and cotton and artificial silk mixed, in the Cotton Yarn and Cloth Industry.

Note: Profits or losses cannot be estimated from Census figures as no data are collected for certain expense items, such as interest, rent, depreciation, taxes, insurance, advertising, etc.
