

# SYNTHETIC TEXTILES AND SILK INDUSTRY 1959 

## PUBLICATIONS

The results of the annual Census of Industry are published by the Dominion Bureau of Statistics in a serles of industry reports which are released each year as the compilations are completed. Reports for industrles classifled to the Textle Mills Major Group are Hsted below, along with current and annual publications of related interest. Similar reports are issued for other industries. A complete catalogue of publications of the Bureau is avallable on request from the Information Services Division, Dominion Bureau of Statistics, Ottawa, of from the Queen's Printer, Ottawa,
A - Annual
Q - Quarterly
M - Monthly
Catalogue Title Pricenumber
34-201 General Review of Textile Mills (A) ..... 50
34-202 Awning, Tent and Sail Industry (A) ..... 50
34-203 Cordage, Rope and Twine Industry (A) ..... 50
34-204 Cotton and Jute Bag Industry (A) ..... 50
34-205 Cotton Textlle Industries (A) ..... 50
34-206 Dyeing and Finishing of Textile Goods Industry (A) ..... 25
34-207 Narrow Fabrics Industry (A) ..... 50

31-001 Inventories, Shipments and Orders in Manufacturing Industries (M) per year ..... 4.00
31-201 General Review of the Manufacturing Industries ( $A$ ) ..... 2.00
65-004 Trade of Canada - Exports (M) per year ..... 7.50
65-007 Trade of Canada - Imports (M) per year ..... 7.50

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Information Services Division, Dominion Bureau of Statistics. or to the Queen's Printer, Ottawa, Canada.

## EXPLANATORY NOTES

This report is one in a series of about 130 pubiications which present the results of the 1959 Census of Manufactures. Most reports in this series refer to specific industries, but there are summary reports for Canada and the provinces and for malor industry groups. An annual Census of Manufactures has been cariled out by the Dominion Bureau of Statistics since 1916.

Industry statistics given in these reports refer to number of establishments, employees, salaries and wages, cost of materlals, supplies, fuel and electricity, gross value of shipments, inventorles and value added by manufactuting. Details of materials used and products shipped are also given. Descriptions of the principal industry statistics, With special feference to 1959 are as follows:

## Period Covered

Firns are asked to submit figures for the calendar year, if at all possible, and most reports are on this basis. Financial year reports for periods differing from the calendar year are accepted in instances where the firms find it Impossible to supply calendar year data from accounting records. However the data on employees, salaries and wages are requested on a calendar year basis in all cases.

## Establishment

Data for the annual census is collected on an establishment basis. A firm with more than one plant is required to flle a report for each plant. In most cases an establishment is a complete factory. sometimes, however, a plant is divided into two or more establishments when it carries out operations classifiable to different industries and when separate accounting records are avallable. Usually the statistics for an establishment relate only to the manufacturing activities. Other activities such as construction at the plant by its own employees, wholesale or retail activities carried on at the plant location, etc., are not included, Plants engaged solely in repair work (except in the case of furniture, shipbuilding, boat building, aircraft and railway rolling stock industries) are not included but plants occupled in assembling parts into complete units are included.

## Employees

Administrative and office employees include all executives and supervisory officials such as presidents, vice-presidents, secretaries, treasurers, etc., together with managets, professional and technical employees, superintendents and factory supervisors above the working foremen level and clerical employees. Working owners and partners are also included in this category.

Production and related workers include all other factory workmen whether paid on a monthly, weekly, hourly of piece-work basis. Working foremen doing work similat to that of the employees they supervise are included, as are maintenance, warehousing and delivery staffs. Employees on new construction work, in retail of wholesale operations, on outside piece work etc., are not included.

Production workers are reported by months, an average for the yeai being obtained by summing the monthly figures and dividing by twelve. This procedure is followed even though the plant did not operate in all months. Figures on employment refer to calendar years whether or not some establishments reported other data on a financial year basis.

## Salaries and Wages

Salaries and wages refep to gross earnings of the employees described above, including salaries, wages, commissions, bonuses, the value of room and board where provided, deductions for income tax and social services such as sickness and unemployment insurance, pensions, etc, as well as any other allowances forming patt of the employees' wages. Payments for overtime are included.

Salaries refer to amounts paid to administrative and office employees. Withdrawals by working owners or partners for normal living expenses for self and family are included but not their withdrawals for income tax. Wages refer to the amounts paid to production and related workers as defined above. Data on earnings refer to the calendar year whether or not some establishments reported other data on a financial year basis.

## Cost of Fuel and Electricity

Figures for fuel refer to amounts actually used, (including fuel used in cars and trucks), not to purchases unless the quantities are the same. Values refer to the laid-down cost at the works. including freight, duty, etc.

## Materials and Supplies Used

Figures represent quantities and laid-down cost values, at the works, of materials and supplies actually used during the year whether purchased from others or received as transfers from other plants of the reporting company. Amounts paid to other manufacturers for work done on materials owned by the reporting company are included. Returnable containers or any other items charged to capital account are not included. Fuels are not included. Goods bought from others or recelved as transfers from other plants of reporting companies for resale without further processing are not included. Maintenance and repair supplies not chargeable to capital account are included.

## Factory Shipments

Factory shipments refer to shipments of goods made from own materials elther in the reporting plant or by other manufacturers on the basis of a charge to the reporting plant for work done. All products and by-products shipped from the establishment are included whether for domestic use. export, or for government departments. Transfer shipments to sales outlets, distributing warehouses or to other manufacturing units of the reporting firm are included. Goods bought of received as transfers and resold without further processing are not included. Values are computed on $\mathrm{f}, \mathrm{o}, \mathrm{b}$. plant or
plant warehouse basis, and do not include sales tax or excise duties. Values of containers not returnable are included. Amounts received in payment for work done on materials owned by others are included

In a few industries such as shipbuilding, alrcraft, etc., where work on principal products extend over a relatively long period, the value of production is recorded rather than the value of shipments. For those industries production is computed from the value of deliveries of complete units during the year plus the value of work done during the year on unfinished units less the value of work done itr previous years on finished units delivered in the yeat undet review.

## Inventories

Values represent the book values of manufacturing inventories owned and held at the reporting plant. Figures include inventories held in warehouses or selling outlets which have been included with plant operations for purposes of reporting shipments

## Value Added by Manufacturing

Figures are computed from value of shipments plus or minus changes in inventories of finished goods and goods in process less cost of materials. fuel and electricity. This figure is sometimes referred to as net production. ${ }^{1}$

## Standard Industrial Classification

The Standard Industrial Classification Manual, prepared by the Dominion Bureau of Statistics, provides for 135 three-digit industries in the manufacturing sector, arranged in 17 major groups. Reporting establishments are classiffed or allotted tc specific industries on the basis of the value of principal products made of shipped.

## Short Forms

Between 1949 and 1957 , in an effort to ease the reporting burden for smaller firms, a short form was used asking for the total value of shipments only or, in a few cases where losses of detail were significant, for quantities and values of principal products. For purposes of publication, missing data were estimated on the basis of appropriate ratios. In general the cut-off point for these short forms was set at $\$ 50,000$ value of shipments. About 40 cic of the total number of establishments reported on the short form and accounted for less than 3 per cent of the total value of shipments.

In 1958, in order to establish a new base year, the small firms were asked to report all items of principal statistics together with some detail on materials and products.

[^0]For the 1959 Census, the short form was used again, but further steps were taken to ease the respondents' burden. First, the general limit for short forms was raised to $\$ 100,000$ value of shipments. In addition, a new intermediate form was developed. This form is a shortened version of the long form in that most of the general questions were pared down and the detailed lists of materials and products were limited to the more important items. The general limits for firms in this category were set at Jetween $\$ 100,000-\$ 500,000$ value of shipments, but in the case of both the short and intermediate forms there were lower cut-offs for a number of industries in which the smaller firms accounted for a larges share of total shipments. On the other hand, limits were raised where this could be done without a significant loss of coverage. On most of the short forms for 1959, in addition to total value of shipments, data on principal products were requested. In a few industries, where loss of employment and earnings data were considered too large because of higher cut-offs, a question on total payroll was placed on the short form.

The intermediate and long forms provide complete data for the compilation of all elements of principal industry statistics and the details of materials and products. The one-page short form, although containing data on principal products and total value of shipments, does not request information on other elements of principal statistics such as value of inventories, materials, fuel and electricity and, in most cases, employment and salaries and wages, nor does it contain detailed data on volume and value of materials used. For purposes of compiling aggregates of principal statistics by industry and by geographic location, the missing data for each establishment were estimated for 1959 by using, in general, ratios based on the change in the value of shipments between 1958 and 1959. The proportion of the estimated data was generally less than 5 per cent of the total in each category of principal statistics.

The general request for the principal items of products on the short form for 1959 permitted a fairly complete compilation of the detailed quantities and values of commodity shipments. In the case of the detailed quantities and values of materials, fuel and electricity, however, and the monthly distribution of production workers, only the totals of data actually reported on the intermediate and long forms are contained in published reports and no attempt was made as in past years to estimate the generally small proportion of individual totals represented by detailed items omitted from the short forms.

The new approach has relleved an additional 12,000 establishments from filling out the regular long form. Establishments now receiving the shoft form number in excess of 20,000 and account for more than 54 per cent of the total number of establishments and a little more than 3 per cent of the total value of shipments.

The Synthetic/Textiles and Silk Industry has two branches, to the first of which belong the producers of synthetic filament yarns and staple fibres. These firms are too few and their activities too varied to permit a separate, detailed statistical analysis without divulging particulars of individual establishments. Although comprised of only 9 concerns. this section of the industry in 1959 accounted for 49 per cent of the industry's employment and for 61 per cent of its factory shipments. Production of textile filament yarns by the eight firms reporting this commodity in 1959 was $47,702,695$ pounds compared to a revised final figure of $39,875,176$ pounds in 1958. The second branch of the industry consists of establishments manufacturing spun yarn and fabrics. The production of tire yarn and of staple fibre by this group cannot be published, because the preponderance of several establishments would cause disclosure of Individual data.

Factory shipments amounting to $\$ 207,061,266$ were reported by the industry in 1959. This represents a substantial increase of $\$ 29,847,625$, or 16.8 per cent, over the previous year's $\$ 177,213,641$. Furthermore, when the increase of $\$ 1,921,810$ during the year in plant inventories of goods in process and of finished goods is taken into account, the estimated value of production in 1959 was $\$ 208,983,076$ as against $\$ 173,891,425$ in 1958 , an increase of 20.2 per cent. Employees numbered 15,004, up by 568 or 3.9 per cent, from the 14,436 reported the year before. During the same two-year period their earnings increased by 8.7 per cent, from $\$ 49,357,206$ to $\$ 53,642,334$. Materials and supplies used in manufacture cost $\$ 96,429,339$ compared to the 1958 figure of $\$ 81,967,412$, an increase of 17.6 per cent.

A noteworthy Increase in shipments of synthetic yarn and thread singles took place in the year under review. The 1959 factory sales of $64,738,257$ pounds valued at $\$ 73,218,246$ were 16.2 and 16.7 per cent higher respectively than the 1958 comparable amounts of $55,736,397$ pounds and $\$ 62,744,404$. There was also an increase, although not quite so large, in sales f.o.b. plant of staple fibre and tow, the total value of which was reported as being $\$ 19,197,780$ in 1959 as against $\$ 17,991,775$ in 1958. Shipments of woven fabrics in 1959 were higher in both value and volume, being $91,470,668$ linear yards worth $\$ 64,025,870$ compared to $86,919,859$ linear yards valued at $\$ 58,423,758$ reported the year before. Again there was a reduction in shipments of knitted fabrics, from $\$ 4,818,104$ in 1958 to $\$ 4,515,434$ in 1959 (See Table 4 for further details of factory shipments). In Table 4 (a) the $91,470,668$ $y$ ards of woven fabrics sold by the industry in 1959
are classified further according to construction. For the second year in a row lining fabrics at $23,923,019$ yards led the way, with dress fabrics $(20,001,018$ yards) in second place.

The prices of both rayon fabrics and of yarns rose during 1959, although the former commodity's increase was not as large as the latter's. The DBS monthly wholesale price index ( $1935-39=100$ ) averaged 163.1 for fabrics and 191.1 fo yarns as opposed to 162.5 and 187.3, respectively, in 1958.

Rayon staple fibre continued as the industry's main material, its consumption rising to $18,952,615$ pounds in 1959 from 18,940,922 pounds in 1958. The use of continuous filament rayon amounted to 11,851.384 pounds, substantially above the $10,436,580$ pounds used the year before. This increase may be attributed in the main to an expanded consumption of acetate rayon, up to $9,075,929$ pounds from 7,475,050 pounds. Comparefive figures on the utilization of terylene, shown for the first time (Table 5), were 887,394 pounds in 1959 as against 515,495 pounds in 1958, a large increase of 72 per cent. In 1959 the consumption of nylon yarn more than doubled, to $5,603,263$ pounds from the $2,537,624$ pounds used in 1958. The amount of cotton yarn consumed, 2,789,629 pounds, was appreciably higher than the $2,431,324$ pounds reported the previous year. The plant cost of chemicals and dyestuffs rose again, the current figure being $\$ 24,728,582$ compared to $\$ 23,683,260$ the previous year.

A total of $\$ 50,271,349$ worth of silk and synthetic fibres, yarns, and piece goods were imported in 1959, whereas in 1958 the value of imports of the same goods was $\$ 45,542,570$. Woven fabrics, $11,786,804$ yards valued at $\$ 24,193,918$, accounted for 48 per cent of the total imports. In the previous year the comparable import figures were $11,035,489$ yards and $\$ 23,771,094$. Imports of staple fibres increased substantially, to $9,844,846$ pounds worth $\$ 5,192,076$ in 1959 compared to $6,718,792$ pounds valued at $\$ 3,563,589$ in 1958. Synthetic yarn for tire fabrics was brought into Canada in the total amount of $4,425,977$ pounds $(2,334,445$ pounds in 1958) and was priced at $\$ 2,463,393$ ( $\$ 1,319,448$ the year before). Imports of narrow woven fabrics increased in 1959. being $\$ 1,273.673$ as against the 1958 value of $\$ 1,166,765$.

Capital investment in the industry (shown in Table 12) declined considerably from $\$ 17,203,000$ in 1958 to $\$ 13,237,000$ in 1959. Repair and maintenance expenditures were somewhat higher, but these increases were more than offset by decreases in the other forms of capital outlay.

TABLE 1. Principal Statistics, Representative Years, 1932-59

| Year | Estab-lishments | Employees | Salaries <br> and <br> wages | Cost at factory of fuel and electricity | Cost at factory of materials used | Value added by manufacture | Gross value of production ${ }^{1}$ |

TABLE 10. Production Workers, by Months, 1959

${ }^{2}$ The number of production workers, by months, was collected only for establishments generally reporting value of shipments of $\$ 500,000$ and over.
, For establishments generally reporting value of shipments of less than $\$ 500,000$, no data on number of workers were collected. Average was estimated by using change in value of shipments to artive at value of payroll which was then used in conjuction with estimated average earnings to arrive at number of workers.

TABLE 14. Fuel and Electricity, 1959

| Kind |
| :--- |

'Establishments generally reporting value of shipments of $\$ 500,000$ and over.
${ }^{2}$ Establishments generally reporting value of shipments of less than $\$ 500,000$.

List of Establishments in the Synthetic Textiles and Silk Industry, 1959

| Name | Address |
| :---: | :---: |
| Quebec: |  |
| Associated Textiles of Canada, Limited.... | Louiseville |
| Aux Tissages Francais Inc. | 7260 St. Urbain St., Montreal |
| Belding-Corticell' Limited.. | Richelieu St., St. Johns |
| Brassard, Maurice | 1695 St. Charles St. Plessisville |
| Brack Mills Limited | Cowansville |
| Bruck Mills Limited | 100 Woodward Ave., Sherbrooke . |
| Brack Mills Limited (St. Johns Division) | 130 Grégoire St., St. Johns |
| Canadian Celanese Limited. | Coaticook |
| Canadian Celanese Limited. | Drummondville |
| Canadian Celanese Limited. | Sorel |
| Canadian Chemical Co. Ltd. (yarn processing) | St-Jean |
| Consolidated Textiles Limited ........... | Joliette |
| Consolidated Textiles Limited | St. Hyacinth |
| Dicnne Spinning Mills Company | St. George, West |
| Domil Led. | Sherbrooke |
| Dominion Thread Mills | 134 McGill St., Montreal |
| Doric Textile Mills Ltd. | St. Johns |
| Dufresne Yarns Limited | 401 Marien Ave., Montreal |
| Duplan of Canada Ltd. . | Montmagny |
| Hatner Fabrics of Canada Ltd. | St. Charles \& Racine Sts. Granby |
| Iber ville Drapery Mills Limited. | 64th Avenue, Iberville |
| Malibu Fabrics of Canada Ltd. | 377 Richmond St., Montreal |

List of Establishments in the Synthetic Textiles and Silk Industry, 1959 - Concluded

[^0]:    ${ }^{1}$ To artive at the National Accounts concept of "gross domestic product at factor cost", it would be necessary to subtract also the cost of office supplies used, advertising, insurance and other goods and services obtained from other businesses. Data on these inputs are not collected on the annual Census of Manufactures. Value added figures for "The primary industries and construction" are published in D.B.S. Dublication $61-202$, Survey of Production.

[^1]:    ${ }^{1}$ Beginning with 1953 the value of factory shipments has been collected instead of the gross value of production.
    ${ }^{2}$ Because of insufficient inventory data in 1953, this figure has been calculated from value of factory shipments and is therefore, only approximate to true "Value added by manufacture".

    Note: Profits or losses cannot be estimated from Census figures as no data are collected for certain expense items. such as interest, rent, depreciation, taxes, insurance, advertising, etc.

[^2]:    "Included in "Other raw stock"".
    " Included in "All other yarns".
    "Inclucies operating, maintenance and repair supplies.

    * No detailed information on materials used was collected from firms generally reporting value of shipments of as ion
     clued in "All other materials and supplies".
    = imviaud Agnes.
