EXPLANATORY NOTES

This report is one in a series of about 140 publications which present the results of the 1960 Census of Manufactures. Most reports in this series refer to specific industries, but there are summary reports for Canada and the provinces and for major industry groups. Adoption of the revised Standard Industrial Classification for 1960 compilations has necessitated changes in titles of many reports in this annual series. The content of many industries has also been affected (see following note on Industrial Classification).

Industry statistics given in these reports refer to number of establishments, employees, salaries and wages, cost of materials, supplies, fuel and electricity, gross value of shipments, inventories and value added by manufacturing. Details of materials used and products shipped are also given. Descriptions of the principal industry statistics, with special reference to 1960 are as follows:

Period Covered

Firms are asked to submit figures for the calendar year, if at all possible, and most reports are on this basis. Financial year reports for periods differing from the calendar year are accepted in instances where the firms find it impossible to supply calendar year data from accounting records. However the data on employees, salaries and wages are requested on a calendar year basis in all cases.

Establishment

Data for the annual census is collected on an establishment basis. A firm with more than one plant is required to file a report for each plant. In most cases an establishment is a complete factory; sometimes, however, a plant is divided into two or more establishments when it carries out operations classifiable to different industries and when separate accounting records are available. Usually the statistics for an establishment relate only to the manufacturing activities. Other activities such as construction at the plant by its own employees, wholesale or retail activities carried on at the plant location, etc., are not included. Plants engaged solely in repair work (except in the case of furniture, shipbuilding, boat building, aircraft and railway rolling stock industries) are not included but plants occupied in assembling parts into complete units are included.

Employees

Administrative and office employees include all executives and supervisory officials such as presidents, vice-presidents, secretaries, treasurers, etc., together with managers, professional and technical employees, superintendents and factory supervisors above the working foremen level, and clerical employees. Working owners and partners are also included in this category.

Production and related workers include all other factory workmen whether paid on a monthly, weekly, hourly or piece-work basis. Working foremen doing work similar to that of the employees they supervise are included, as are maintenance, ware-

housing and delivery staffs. Employees on new construction work, in retail or wholesale operations, on outside piece work etc. are not included.

Production workers are reported by months, an average for the year being obtained by summing the monthly figures and dividing by twelve. This procedure is followed even though the plant did not operate in all months. Figures on employment refer to calendar years whether or not some establishments reported other data on a financial year basis.

Salaries and Wages

Salaries and wages refer to gross earnings of the employees described above, including salaries, wages, commissions, bonuses, the value of room and board where provided, deductions for income tax and social services such as sickness and unemployment insurance, pensions, etc., as well as any other allowances forming part of the employees' wages. Payments for overtime are included.

Salaries refer to amounts paid to administrative and office employees. Withdrawals by working owners or partners for normal living expenses for self and family are included but not their withdrawals for income tax. Wages refer to the amounts paid to production and related workers as defined above. Data on earnings refer to the calendar year whether or not some establishments reported other data on a financial year basis.

Cost of Fuel and Electricity

Figures for fuel refer to amounts actually used, (including fuel used in cars and trucks), not to purchases unless the quantities are the same. Values refer to the laid-down cost at the works, including freight, duty, etc.

Materials and Supplies Used

Figures represent quantities and laid-down cost values, at the works, of materials and supplies actually used during the year whether purchased from others or received as transfers from other plants of the reporting company. Amounts paid to other manufacturers for work done on materials owned by the reporting company are included. Returnable containers or any other items charged to capital account are not included. Fuels are not included. Goods bought from others or received as transfers from other plants or reporting companies for resale without further processing are not included. Maintenance and repair supplies not chargeable to capital account are included.

Factory Shipments

Factory shipments refer to shipments of goods made from own materials either in the reporting plant or by other manufacturers on the basis of a charge to the reporting plant for work done. All products and by-products shipped from the establishment are included whether for domestic use, export, or for government departments. Transfer shipments to sales outlets, distributing warehouses or to other manufacturing units of the reporting firm are included. Goods bought or received as transfers

and resold without further processing are not included. Values are computed on f.o.b. plant or plant warehouse basis, and do not include sales tax or excise duties. Values of containers not returnable are included. Amounts received in payment for work done on materials owned by others are included.

In a few industries such as shipbuilding, aircraft, etc., where work on principal products extend over a relatively long period, the value of production is recorded rather than the value of shipments. For those industries production is computed from the value of deliveries of complete units during the year plus the value of work done during the year on unfinished units less the value of work done in previous years on finished units delivered in the year under review.

Inventories

Values represent the book values of manufacturing inventories owned and held at the reporting plant. Figures include inventories held in warehouses or selling outlets which have been included with plant operations for purposes of reporting shipments.

Value added by Manufacturing

Figures are computed from value of shipments plus or minus changes in inventories of finished goods and goods in process less cost of materials, fuel and electricity. This figure is sometimes referred to as net production.¹

Standard Industrial Classification

The revised Standard Industrial Classification which has been introduced with the 1960 Census of Manufactures provides for a breakdown of the universe into 140 industries arranged in 20 major groups compared with 135 industries in 17 major groups in the old classification which was used in the compilations for the years 1949 to 1959 inclusive. It incorporates changes considered desirable on the basis of experience in using the earlier classification as well as those which take account of changes in the structure of Canadian industries associated with the rapid developments of the past decade. Full details are contained in the Standard Industrial Classification Manual, Catalogue No. 12-501, which is available from either the Queen's Printer or the Dominion Bureau of Statistics. Reporting establishments are classified or allotted to specific industries on the basis of the value of principal products made or shipped.

Many industries remain unchanged in the new classification but in many instances there have been substantial changes in content because of the shifting of establishments from one industry to another or in re-grouping of establishments. Where

changes have occurred the principal statistics for 1957, 1958 and 1959 have been re-compiled to provide data on a basis comparable with those for 1960.

Short Forms

Between 1949 and 1957, in an effort to ease the reporting burden for smaller firms, a short form was used asking for the total value of shipments only or, in a few cases where losses of detail were significant, for quantities and values of principal products. For purposes of publication, missing data were estimated on the basis of appropriate ratios. In general the cut-off point for these short forms was set at \$50,000 value of shipments. About 40% of the total number of establishments reported on the short form and accounted for less than 3 per cent of the total value of shipments.

In 1958, in order to establish a new base year, the small firms were asked to report all items of principal statistics together with some detail on materials and products.

For the 1959 Census, the short form was used again, but further steps were taken to ease the respondents' burden. First, the general limit for short forms was raised to \$100,000 value of shipments. In addition, a new intermediate form was developed. This form is a shortened version of the long form in that most of the general questions were pared down and the detailed lists of materials and products were limited to the more important items. The general limits for firms in this category were set at between \$100,000-\$500,000 value of shipments, but in the case of both the short and intermediate forms there were lower cut-offs for a number of industries in which the smaller firms accounted for a larger share of total shipments. On the other hand, limits were raised where this could be done without a significant loss of coverage. On most of the short forms for 1959, in addition to total value of shipments, data on principal products were requested. In a few industries, where loss of employment and earnings data were considered too large because of higher cut-offs, a question on total payroll was placed on the short form. This practice was followed again in 1960.

The intermediate and long forms provide complete data for the compilation of all elements of principal industry statistics and the details of materials and products. The one-page short form, although containing data on principal products and total value of shipments, does not request information on other elements of principal statistics such as value of inventories, materials, fuel and electricity and, in most cases, employment and salaries and wages, nor does it contain detailed data on volume and value of materials used. For purposes of compiling aggregates of principal statistics by industry and by geographic location, the missing data for each establishment were estimated for 1959 by using, in general, ratios based on the change in the value of shipments between 1958 and 1959. The proportion of the estimated data was generally less than 5 per cent of the total in each category of principal statistics.

¹ To arrive at the National Accounts concept of "gross domestic product at factor cost", it would be necessary to subtract also the cost of office supplies used, advertising, insurance and other goods and services obtained from other businesses. Data on these inputs are not collected on the annual Census of Manufactures. Value added figures for "The primary industries and construction" are published in D.B.S. publication 61-202, *Survey of Production*.

FUR GOODS INDUSTRY, 1960

For the Census of Industry survey year 1960, the Bureau adopted a revised Standard Industrial Classification. The adoption of this revised Classification brought no change to this industry, and it continues to be defined as comprising those "Establishments primarily engaged in manufacturing fur coats, other fur garments, accessories and trimmings".

The Fur Goods Industry in 1960 reported shipments with a total value of \$60,985,273 f.o.b. plant, \$1,638,112, or 2.6 per cent lower than the comparable 1959 figure of \$62,623,385. When the change in inventories of goods in process and of finished goods is taken into account, the estimated value of production in the year under review was \$61,464,732, a decrease of \$2,258,358, or 3.5 per cent, from the \$63,723,090 recorded in 1959.

The industry in 1960 consisted of 491 firms, eleven more than the previous year, and they employed 4,119 workers, 142 fewer than the 4,261 reported in 1959. Salary and wage payments, at \$14,845,502 in the year under review, were \$517,728 or 3.4 per cent lower than the 1959 total payroll of \$15,363,230.

Materials and supplies used by the industry in the current year cost \$36,724,449, a decrease of \$1,478,530 or 3.9 per cent from the \$38,202,979 spent by the firms in 1959.

Ladies' fur coats, jackets and boleros again continued to be the main products shipped, totalling 177,954 valued at \$41,923,830 as against comparable shipments in 1959 of 184,888 valued at \$44,231,510, a decline of 3.7 per cent in number and of 5.2 per cent in value.

TABLE 1. Principal Statistics Canada, Representative Years, 1921-58, and by Provinces, 1959 and 1960

Basis: Standard Industrial Classification in use both prior to and in 1960 (no change in 1960).

Other provinces	6 ⁵	50	161,807	4,672	273,276	266,700	539,542

¹ Figures for "Value added by manufacture" are obtained by subtracting cost of materials used and cost of fuel and electricity from value of production. In 1952 and 1953 value of shipments was used since the value of production could not be ascertained. In 1954 and 1955 value of production was computed by using the value of shipments plus or minus the increase or decrease in finished goods inventory. For 1956 and later years the change in goods in process inventory was also taken into account.

² Figures for 1952, and later years represent value of factory shipments.

³ Fuel only.

Average for all establishments			1,871	1,171

¹ The number of production workers, by months, was collected only for establishments generally reporting value of shipments of \$100,000 and over.² The number of production workers, by quarters, was collected only for establishments generally reporting value of shipments between \$25,000 and \$100,000.³ For establishments generally reporting value of shipments of less than \$25,000, no data on number of workers were collected. Average was estimated by using change in value of shipments to arrive at value of payroll which was then used in conjunction with estimated average earnings to arrive at number of workers.

Canada	9,048,268	9,182,012	1,718,723	1,850,117	6,188,331	6,536,396	16,955,322	17,568,525

¹ The opening inventory for 1960 does not necessarily agree with the closing inventory for 1959 because of changes in the composition of the industry, such as the addition of new establishments, the disappearance of old ones or the transfer of establishments between industries for statistical purposes. The figure for value added in 1959 does not need to be altered because of such changes in the composition of the industry.

² Newfoundland, New Brunswick and Alberta.

FUR DRESSING AND DYEING INDUSTRY, 1960

Although the Bureau has adopted a revised Standard Industrial Classification for 1960, there has been no change in the composition of this industry, but the title was changed from the Fur Dressing Industry to Fur Dressing and Dyeing Industry. The industry continues to be defined as comprising "Establishments primarily engaged in scraping, currying, tanning, bleaching and dyeing pelts".

The major change made to this industry in the implementation of the revised 1960 Classification consisted of moving it from Major Industrial Group 7, known as "Clothing Industries", to Major Industrial Group 20, entitled "Miscellaneous Manufacturing Industries". However, in order to maintain historical continuity, it has been included in this 1960 report as it was in the years up to and including the year 1959. On the other hand, the Principal Statistics of this industry for 1960 will be shown in Tables 1 to 3 of the 1960 report entitled "Miscellaneous Manufacturing Industries", (Catalogue No. 47-205); and the industry will not be included in any of the tables of the "General Review of Clothing Industries 1960" (Catalogue No. 34-211). Beginning with

the 1961 reports, this industry will be included in the Miscellaneous Industries report (47-205) and will no longer form part of the present report.

Receipts for work done and sales of own goods (\$6,610,586 and \$194,400 respectively) by the Fur Dressing and Dyeing Industry in 1960 amounted to \$6,804,986, an increase of 4.6 per cent over the amount of \$6,503,695 received in 1959. There were 17 plants in operation, two more than in the previous year. Employment within the industry decreased by 4 from 993 in 1959 to 989 in 1960. On the other hand, total salaries and wages paid, \$3,641,875 in the current year, were 6.7 per cent higher than the corresponding 1959 payments of \$3,412,419.

The cost of chemicals, dyes and other materials used was lower by 19.1 per cent, being \$1,253,798 in 1959 and \$1,014,656 in 1960.

The number of skins treated, 7,182,086, was 1.5 per cent below the 7,294,823 reported in 1959. Muskrat accounted for the largest share of the North American skins processed, 2,871,175 or 40 per cent of the grand total. Jap mink and China weasel skins accounted for 11.4 per cent of all types of skins processed.

TABLE 1. Principal Statistics, Canada, Calendar Years, 1917-58 and by Provinces, 1959 and 1960
Basis: Standard Industrial classification in use both prior to and in 1960 (no change in 1960)

¹ For the years 1917-23 cost of fuel only is shown.

² Figures for "Value added by manufacture" are obtained by subtracting cost of materials used and cost of fuel and electricity from value of production. In 1952 and 1953 value of shipments was used since the value of production could not be ascertained. In 1954 and 1955 value of production was computed by using the value of shipments plus or minus the increase or decrease in finished goods inventory. For 1956 and later years the change in goods in process inventory was also taken into account.

³ Figures for 1952 and later years represent value of factory shipments.

⁴ Ontario, 2; Manitoba, 2; Alberta, 1; and British Columbia, 1.

TABLE 2. Number of Fur Skins Treated, Canada, 1959 and 1960

Kind	1959	1960
Badger	177	1
Bear	1,088	1,222
Beaver	73,023	147,319
Cat, house and other	7,381	20,094
Ermine, (weasel)	33,730	4,155
Fisher or pekan	142	187
Fitch	7,426	337
Fox, silver	943	1,425
Fox, other than silver	26,897	28,115
Goat and kid	6,600	181
Kolinsky	221,063	190,706
Lamb, Persian	767,552	1,209,477
Lamb, other	6,013	24
Lynx	182	414
Marten	6,970	5,549
Mink	512,114	692,916
Mink, Jap and China Weasel	763,568	820,219
Muskrat	3,562,858	2,871,175
Nutria	8,767	1,053
