BIBLIOTHÈQUE

MARCH - 1970 - MARS

Sawmills in Nova Scotia, producing less than 1,000 M ft.b.m. per year, and sawmills in New Brunswick, Quebec and Ontario, producing less than 2,000 M ft.b.m. per year, are excluded from this survey. For these small mills, and any larger mills that fail to report, production is estimated on the basis of the figures for the previous month and the rate of increase or decrease in production of the reporting mills. Initially the production of non-reporting mills has been estimated on the basis of their known production in previous years and the rate of increase or decrease shown by reporting mills. Stocks are estimated from total estimated production figures on the basis of the assumption that total stocks/production ratio equals the stocks/production ratio of the reporting mills. For Saskatchewan only the Saskatchewan Timber Board and the few relatively large independent mills are asked to report. For the numerous small mills in Saskatchewan production is estimated on the basis of a fixed ratio between their collective production and the production of the S.T.B., established by the Forestry Branch of the Department of Natural Resources. It is assumed that these small mills do not hold any stocks of lumber. The data for Alberta are established by the Alberta Bureau of Statistics, in co-operation with the Department of Lands and Forests and the Alberta Forest Products Association. The co-operation of all participating parties is acknowledged gratefully.

The species distribution of estimated production and estimated stocks is based on the species distribution of reported production and reported stocks in the same province.

Table 3 gives the distribution of shipments reported by sawmills and planing mills. It is to be noted that the reported destinations are not necessarily final destinations. Undoubtedly part of the lumber shipments is subsequently redistributed and shipped to other destinations than those reported by the manufacturers. The reported shipments also include sales to other sawmills and planing mills that are included in this survey. The subsequent shipment of this lumber by the purchasing mills is again included in the reported shipments. This leads to duplication in the figures for shipments by destination. However, the total of reported shipments and estimated shipments and adjustments is free of duplication because this figure is calculated from the estimated total production and the estimated total stocks, both of which are free of duplication. The quantities of lumber purchased by reporting mills from other mills are shown in Table 5.

Les scieries de la Nouvelle-Écosse produisant moins de 1,000 M pi.m.p. par an et les scieries du Nouveau-Brunswick, du Québec et de l'Ontario produisant moins de 2,000 M pi.m.p. par an sont exclues de la présente enquête. Pour ces petites scieries ainsi que pour les grandes qui n'ont pas fait de déclaration, leur production est estimée à l'aide des chiffres du mois précédent et du taux de croissance ou de régression de la production des scieries déclarantes. À l'origine, la production des scieries non déclarantes était estimée à partir de leur production connue des années précédentes compte tenu du taux d'augmentation ou de diminution des scieries déclarantes. Les stocks sont estimés à partir du total des chiffres de la production et des estimations en se basant sur la présomption que la relation total des stocks/production égale la relation stocks/production des scieries déclarantes. Pour la Saskatchewan en particulier on demande au Saskatchewan Timber Board et aux quelques grandes scieries de faire rapport. Pour la multitude des petites scieries de la Saskatchewan on estime la production basée sur la relation donnée (établie par la section forestière du ministère des Ressources Naturelles) entre l'ensemble de leur production et la production du S.T.B. On suppose que les petites scieries ne détiennent pas de stocks de bois d'oeuvre. Les données pour l'Alberta sont préparées par le Bureau de la Statistique de l'Alberta en coopération avec la section forestière du ministère des Ressources Naturelles et l'Association des produits forestiers de l'Alberta. Nous sommes reconnaissants de la participation actuelle des organismes ci-haut mentionnés.

La répartition par essence de la production et des stocks estimatifs se fonde sur la répartition par essence de la production et des stocks établis pour la même province.

Le Tableau 3 montre la répartition des expéditions déclarées par les scieries et les ateliers de rabotage. Il ne faut pas oublier que les destinations déclarées ne sont pas nécessairement les destinations ultimes. Nul doute qu'une partie de ce bois d'oeuvre est subséquentement expédiée ailleurs qu'aux endroits mentionnés par les manufacturiers. Les expéditions déclarées comprennent en plus les ventes à d'autres scieries et ateliers de rabotage qui sont inclus dans la présente enquête. Les expéditions ultérieures de ce bois d'oeuvre par les moulins qui l'ont acheté est également inclus dans les expéditions déclarées. Il en découle un double emploi des chiffres des expéditions suivant la destination. Cependant, le total des expéditions déclarées, des expéditions estimatives et des rectifications est exempt de duplication vu que ce chiffre est calculé à partir de la production totale évaluée et des stocks globaux estimés, qui sont exempts de duplication. Les quantités de bois d'oeuvre achetées par les scieries répondantes, des autres scieries, sont montrées au Tableau 5.
