ANNUAL INDUSTRY REPORT

MANUFACTURES OF THE NON-METALLIC MINERALS GROUP

THE PETROLEUM PRODUCTS INDUSTRY, 1937.

Statistics for the Petroleum Products Industry cover all establishments in Canada which were occupied chiefly in - (a) the refining of crude oil to produce gasoline, fuel oil, etc., and (b) the blending or compounding of lubricating oils and greases.

Forty-four refineries and 13 blending plants, or a total of 57 works, reported under this category in 1937 and the aggregate value of production was \$98,454,014, an increase of 15 per cent over the total of \$85,802,363 for the 63 operating establishments in 1936.

The output figure for 1937 included \$97,701,954 for petroleum refineries and \$752,060 for concerns engaged in blending oils and greases. The principal statistics for each of these groups and for the industry as a whole are tabulated below and the detailed figures for each division are recorded separately in the succeeding pages of this report.

Table 1 - PRINCIPAL STATISTICS OF THE PETROLEUM PRODUCTS INDUSTRY, 1933 - 1937.

(a) THE PETROLEUM REFINING INDUSTRY

The 44 petroleum refineries which operated during 1937 were distributed as follows - 17 in Saskatchewan, 8 in Alberta, 5 in Ontario, 5 in Quebec, 3 in Manitoba, 3 in British Columbia, and 1 in each of Nova Scotia, New Brunswick, and the Northwest Territories. Compared with 1936 there was a gain of 1 refinery in Quebec and a loss of 4 in Alberta, 1 in Saskatchewan, 1 in Manitoba and 1 in British Columbia, while in the other provinces the number remained unchanged. The operating refineries had a combined capacity of 168,820 barrels of crude oil per day distributed by provinces, as follows - Quebec, 68,500 barrels, or 40.7 per cent of the total; Ontario, 40,500 barrels, or 24.1 per cent; British Columbia, 19,500 barrels, or 11.6 per cent; Saskatchewan, 16,070 barrels, or 9.6 per cent; Nova Scotia, 11,000 barrels, or 6.6 per cent; Alberta, 3,800 barrels, or 5.8 per cent; Manitoba, 2,450 barrels, or 1.5 per cent; New Brunswick, 250 barrels, or 0.1 per cent; and the Northwest Territories, 150 barrels, or 0.1 per cent. Fifteen establishments reported cracking units in use with aggregate capacity of about 80,450 barrels per day. The location, type and capacity of each of these refineries is recorded in the Directory at the end of this report.

In 1937 the operating refineries used 1,545,577,025 gallons of imported crude oil and 90,004,669 gallons of crude oil, naphtha and absorption gasoline from Canadian wells, a total of 1,433,581,694 gallons which was equal to about 66.7 per cent of refinery capacity. About 69.4 per cent, or 994,441,071 gallons, was imported from the United States, 24.3 per cent or 349,135,949 gallons was brought in from other countries, and 6.3 per cent or 90,004,669 gallons was from Canadian sources. The total cost at the refineries of all crude oil and naphtha charged to stills during the year was \$75,335,600. Stocks of crude and naphtha held at the refineries at the end of the year totalled 133,033,933 gallons.

Gasoline production in 1937 amounted to 640,299,876 gallons of which 361,900,397 gallons were made by the straight run process and 278,399,479 gallons by cracking. In addition, the refineries used for blending purposes a total of 47,514,563 gallons of imported casinghead gasoline which was not included in the production figures. The gallonage of gasoline made in 1937 was the highest on record, being 13 per cent greater than the output in 1936. The value of the 1937 production was \$58,568,348 at refinery prices. Stocks held at the refineries at the end of the year included 88,948,091 gallons of straight run and cracked gasoline and 7,030,185 gallons of imported casinghead, the latter for blending purposes only.

Imports of gasoline, including casinghead, during 1937 amounted to 72,478,101 gallons which, with the production of 640,299,876 plus the declines in refinery stocks of 820,659 gallons and less the exports of 4,222,972 gallons, made an apparent consumption in Canada of 709,275,664 gallons for the year. This figure agrees fairly well with the gross sales of 718,620,111 gallons reported to the provincial governments under the Gasoline Tax Acts. The gross sales figure for Alberta, it is known, includes Turner Valley naphtha and absorption gasoline which was sold direct from the wells or separators to the consumers, the absorption gasoline which was used for blending purposes at refineries, and also engine distillates which were used for auto or tractor use, but these amounts were not included in the gasoline production figures and were not taken into account when calculating the apparent consumption. Reports from oil well operators in Alberta indicate that about 2.6 million gallons of naphtha and absorption gasoline were sold direct to consumers during 1937 and that 3.2 million gallons of absorption gasoline were used for blending direct without being charged to refinery stills, while the tractor and engine distillate made in Alberta refineries amounted to 9,971,529 gallons. The inclusion of these amounts would raise the apparent consumption by 15.8 million gallons.

Production in Canadian refineries of fuel and gas oils (excluding any made and used for cracking purposes) totalled 544,109,039 gallons of which 489,185,287 gallons were for sale and 54,923,757 gallons for use as fuel in the refineries. Imports aggregated 49,315,477 gallons and exports amounted to 11,050,735 gallons. Refinery stocks at the end of the year were about 85,076,516 gallons or 18,566,691 gallons less than in 1936. The apparent consumption in Canada, as calculated from the above figures, was 563,807,090 gallons.

The output of tractor and engine distillate was 30,319,024 gallons in 1937 and imports amounted to 1,451,292 gallons. Stocks at refineries increased 580,997 gallons. The apparent Canadian consumption was 31,189,319 gallons.

Refinery production of lubricating oils was 22,952,802 gallons and the output from blending plants was 914,727 gallons, making a total production in Canada of 23,867,529 gallons. By adding to this figure the imports of 15,331,130 gallons and the decline in refinery stocks of 426,473 gallons, an estimate of 39,625,132 gallons is obtained as the apparent Canadian consumption in 1937.

Production of lubricating grease in refineries was 13,899,436 pounds and in blending plants, 902,251 pounds, a total of 14,801,687 pounds. The latter quantity plus imports of 5,858,947 pounds indicates a consumption in Canada of 20,660,634 pounds for all purposes in 1937.

Capital employed in the Petroleum Refining Industry in 1937 was reported at \$63,759,579 of which \$34,761,597 was the value placed on land, buildings and equipment. The average number of employees was 5,047 and payments to these workers in salaries and wages was \$8,126,583. Materials used in refining operations cost \$79,993,972, fuel and electricity cost \$4,444,878, and products were valued at \$97,701,954 at the works.

(b) LUBRICATING OILS AND GREASES

In 1937 reports were received from 13 factories which were engaged chiefly in compounding lubricating oils and greases; 9 were in Ontario, 3 in Quebec, and 1 in British Columbia.

Capital employed in 1937 was given at \$520,687; the average number of employees was 90; payments for salaries and wages totalled \$120,260; materials for compounding, containers for the finished products, and process supplies cost \$407,908; and the value of all products was \$752,060, including \$568,651 for lubricating oils, \$131,766 for lubricating greases, and \$51,643 for miscellaneous products.

Including the production from refineries, the total Canadian output of lubricating oils in 1937 was 23,867,529 gallons valued at \$4,579,182 compared with 20,459,318 gallons valued at \$4,219,815 in 1936. The total production of lubricating greases was 14,801,687 pounds at \$645,192 in 1937 as against 12,245,346 pounds at \$645,241 in 1936.

- (a) Import figures for fuel oil include amounts brought in "ex-warehoused for ships' stores". This item covers fuel oil imported in bond for use in fueling vessels at Canadian ports and, as there is no corresponding export item, such quantities might properly be omitted when compiling figures of Canadian consumption. In 1935, the amount under this item was 18,389,862 gallons, in 1936, 24,048,705 gallons, and in 1937, 24,369,010 gallons.
- (b) Exclusive of fuel oil for cracking operations but including fuel oil used by refineries for power or heating purposes.
- (c) Production figures for gasoline do not include absorption gasoline or Turner Valley naphtha sold to consumers at the wells. These gallonages, however, are probably included in the gross sales of gasoline as compiled from taxes paid to the Alberta Government (Table 48); engine and tractor distillate is also taxable in this province.

Table 38 - APPARENT CONSUMPTION OF FUEL OIL, GASOLINE, KEROSENE, ENGINE DISTILLATE, and LUBRICATING OILS,
1920 - 1937.

Year	Fuel and gas oils	Gasoline	Engine distillate	(Computed from Production, Imports, Exports and Refinery Stocks) (x)

Fuel oil includes all oils heavier than 42° A.P.I. processed from petroleum. Amounts recorded respectively for domestic, industrial, and tractor purposes were for actual CONSUMPTION within the areas indicated; those recorded under railways and bunkering were taken from, or accepted at delivery points within these areas, but were consumed by carriers where required.

Table 52 - COMPARATIVE SUMMARY OF KEROSENE DELIVERIES, BY PROVINCES, 1951 - 1957.

(Prepared from distributors' and importers' reports - Imperial gallons - Calendar years)

NOTE - Figures taken from "Petroleum Fuels in Canada" issued by the Bureau of Mines, Department of Mines and Resources, Ottawa.
