THE FERTILIZERS INDUSTRY

1957

Factory shipments by plants in Canada which were engaged principally in the manufacture of fertilizers were valued at \$83,807,556 in 1957 compared with \$83,399,218 in 1956. In addition, there was a production of 204,780 tons of cyanamid (excluding cyanamid for non-agricultural purposes) ammonium sulphate, mixed fertilizers and fish fertilizers valued at \$6,774,479 by establishments which were classified to other industrial groups.

Forty-four plants were occupied chiefly in the manufacture of fertilizers in 1957, there being 23 in Ontario, 7 in Quebec, 4 in British Columbia, 3 in Nova Scotia, 3 in New Brunswick, 2 in Prince Edward Island and 2 in Alberta. Workers in these establishments increased from 2,958 in 1956 to 3,011 in 1957 and salaries and wages increased from \$11,757,117 in 1956 to \$12,899,267 in 1957.

Factory shipments of mixed fertilizers in 1957, from all industries amounted to 723,100 tons worth \$37,026,000 and included 716,387 tons at \$36,573,644 made by plants in the fertilizer manufacturing industry and 6,669 tons at \$451,814 made in the meat-packing and oils and fats industries. In 1956 the corresponding totals were 703,200 tons at \$34,408,000.

Superphosphate was manufactured in 1957 by Canadian Industries Limited with plants at McMasterville, Quebec and Hamilton, Ontario; Green Valley Fertilizer and Chemical Co. Ltd. at New Westminster, British Columbia and Elmira Fertilizers Limited at Elmira, Ontario.

Ammonium Nitrate (fertilizer grade) was manufactured in 1957 by North American Cyanamid (Welland Works) at Niagara Falls in Ontario, by Consolidated Mining and Smelting Company of Canada, Limited at Trail, British Columbia and at Calgary, Alberta, and by Northwest Nitro-Chemicals Ltd. at Medicine Hat, Alberta. The output figures are not published separately since there were only two major producers of ammonium nitrate and one major producer of superphosphate.

Ammonium sulphate was made by Consolidated Mining and Smelting Company of Canada, Limited at Trail, British Columbia and also by the following coke manufacturers: Algoma Steel Corporation at Sault Ste. Marie, Ontario; Dominion Iron and Steel Ltd. at Sydney, N.S.; Montreal Coke and Manufacturing Company (Quebec Natural Gas Corporation) at Montreal, Quebec and The Steel Company of Canada, Limited at Hamilton, Ontario. Another firm Sherritt-Gordon Mines Limited at Fort Saskatchewan, Alberta, recovered ammonium sulphate as a by-product in connection with a special process used for refining nickel. Factory shipments during the calendar year 1957 amounted to 318,634 tons and imports totalled 3,288 tons. Ammonium phosphate was made by the Consolidated Mining and Smelting Company of Canada, Limited at Trail, British Columbia and Kimberley, British Columbia and by Northwest Nitro-Chemicals Ltd. at Medicine Hat, Alberta.

A special survey of the fertilizer trade in Canada during the fertilizer year ended June, 1958 has been completed by the Dominion Bureau of Statistics and the results have been published in a special report. Summary figures on the sales of fertilizers have been reprinted in tables 11-15 of this bulletin. A total of 870,539 tons of mixtures and materials was sold in Canada during the year ended June 30, 1958 compared with 808,251 tons during the preceding twelve-month period.

Note: Due to lack of inventory data, figures for value added by manufacture prior to 1954 were obtained by subtracting the cost of materials used, including fuel and electricity, from the total value of factory shipments. In 1954 and 1955 the "Value added" adjustment incorporated the increase or decrease to shipments values resulting from changes in the value of inventories over the period. For these two years, the adjustments that were made used only the change in finished product inventory owned by manufacturers. Beginning with 1956 the calculation of the "Value added" figure was further adjusted to take into account the "Goods in process" as well as the finished goods held at plant or plant warehouse.

¹ (a) Book value of all manufacturing inventories owned and held at plant and plant warehouses.

(b) Beginning with 1954, information on the value of year-end inventory holdings at plant and plant warehouses is being collected as part of the annual Census of Industry. These data were formerly collected by a separate survey. The summarized results for the Fertilizers Industry for the year under review are shown in the above table.

(c) The opening inventory for the current year may not necessarily agree with the closing inventory published the previous year because of changes in the composition of the industry, such as: the addition of new establishments, the disappearance of old ones, or the transfer of establishments to other industries for statistical purposes. The figure for value added by manufacture for the previous year does not need to be altered because of such changes in the composition of the industry.

Note: The fertilizers industry includes only the concerns which are engaged chiefly in the manufacture of fertilizers. Some fertilizers are made also in the other industries; for example, ammonium sulphate is produced as a by-product in coke plants, cyanamid is made by a firm which is classified to the heavy chemicals industry and a small amount of mixed fertilizer is made in the slaughtering and meat-packing industry. For the total production of mixed fertilizers, see Table 5.
