THE FERTILIZER TRADE

July 1, 1953 - June 30, 1954

Sales of mixed fertilizers and of fertilizer materials for direct application to the soil, including exports, amounted to 1,544,170 tons in the year ended June 30, 1954. Sales to Canadian users totalled 811,641 tons, including 160,481 tons of fertilizer materials and 651,160 tons of mixtures, the latter tonnages being down 10.6 per cent and up 1.7 per cent, respectively, over the corresponding amounts sold during the previous twelve months.

Production of fertilizer materials in the period under review, including such items as ammonium nitrate, ammonium phosphate, ammonium sulphate, superphosphate and cyanamide, amounted to 1,091,425 tons, compared with 1,036,986 tons in the preceding year, and the output of mixed fertilizers increased from 693,959 tons to 700,995 tons. The figures for the materials and mixtures are not additive as some of the former were used in making the latter.

Imports of fertilizers amounted to 745,728 tons, compared with 823,953 tons during the previous fertilizer year. The more important items which were brought in were: natural phosphate rock, 341,766 tons; superphosphate, 188,832 tons; muriate of potash, 139,146 tons; nitrogen solution, 30,157 tons and sulphate of potash, 17,067 tons. The phosphate rock was used, of course, in Canadian fertilizer plants to make superphosphate and ammonium phosphate; similarly, most of the other imported materials were used in making mixed fertilizers.

Exports consisted of 693,150 tons of materials and 39,379 tons of mixtures, representing declines of 0.6 and 26.5 per cent, respectively, from the previous fertilizer year. Ammonium sulphate, ammonium phosphate, ammonium nitrate and cyanamide were the principal materials exported.
