PREFACE

This edition of the Chemical Directory is the sixth of its kind which has been issued by the Dominion Bureau of Statistics, previous editions having been published in 1919, 1921, 1933, 1938 and 1950. The present volume brings the information up to date in order to meet the frequent requests that come to the Bureau for complete lists of producers of the many chemicals or chemical products which are manufactured in Canada. In addition, it is believed that a directory of this kind will be a very useful reference for manufacturers, importers and consumers of chemicals and chemical products.

In making up this directory the definition of the chemical industries has been broadly interpreted to include not only the actual manufacturers of chemicals but also those concerns which produce related products or employ chemical processes in their factory operations. No reference is made to importers and wholesalers. Only actual producers in Canada are included.

The information as given herein has been taken chiefly from the Census of Industry reports for 1952 and 1953, but in many cases supplementary details have been obtained from the producers.

Detailed statistics of production, imports and exports have not been included in this survey as separate reports along this line are issued regularly by the Bureau and may be obtained on application to the Dominion Statistician.

This volume has been prepared by Mr. J.J. Parchelo, B.A.Sc., Chief of the Metal and Chemical Products Section, under the direction of Mr. H. McLeod, B.Sc., F.C.I.C., Director of the Industry and Merchandising Division of the Bureau.

H. Marshall

Dominion Statistician.

DOMINION BUREAU OF STATISTICS,

Ottawa, July 3, 1954

INTRODUCTION

This edition of the Chemical Directory is the sixth that has been issued by the Dominion Bureau of Statistics, previous editions having been published in 1919, 1921, 1933, 1938 and 1950.

In preparing this directory the definition of the chemical industries has been broadly interpreted to include not only the manufacturers of chemicals but also the makers of allied products, such as paints, soaps, etc., and the closely related process industries, such as petroleum refining, paper making, etc. In 1952, about 1,588 plants operated in these industries and production totalled about \$4,352 millions.

In such an extensive group of industries a wide variety of products is manufactured, and it is with the idea of furnishing definite information as to the nature and extent of manufacture of these commodities that the Bureau has prepared the present directory. Primarily the details have been taken from the returns which the producing companies filed with the Bureau under the Census of Industry for 1952 and 1953, but in many cases supplementary data have been obtained from the reporting firms. The information, therefore, pertains to the latter part of 1953 but every effort has been made to bring the records up to date to the time of going to press.

Many difficulties are met in preparing a directory of this nature. In the first place there is the difficulty of obtaining the essential details from *all* companies. For example, one company is content to list its products under the general heading of "dry colours", whereas another lists in detail the various dry colours which it manufactures. Insofar as is possible, these inconsistencies have been eliminated, but the general result is that considerable valuable detail is lost in order to avoid grave inaccuracies in listing the producers under the individual items.

Secondly, there is the difficulty of keeping up to date the lists of firms and of products. During the past year many new firms have started to manufacture in Canada; others have been forced to close or to suspend or curtail operations; others have changed ownership; and still others have started to produce new commodities. Some such changes will have taken place since the material for this directory was collected, in which cases the companies or the products will be erroneously listed.

Again, there is the fact that the records of the Industrial Census may not carry the names of all concerns which might be considered as manufacturers. There are many concerns, particularly in the medicinal and pharmaceutical group, which are licensed to manufacture in Canada but which actually have their goods made in the plant of another company which turns over to them the completed merchandise ready for sale. Many such companies will be omitted from this report as the Industrial Census is concerned only with actual production and does not ask for returns from the companies which do not operate factories.

Except for the few summary tables which follow, the statistics of production, imports and exports have been omitted as the Bureau issues separate reports in which this information is given in considerable detail. These publications may be obtained by writing direct to the Dominion Statistician.

TABLE 1. Historical Summary of the Chemicals and Allied Products Industries in Canada, 1922-1953

Year	Number of plants	Capital employed	Number of employees	Salaries and wages	Cost of fuel and electricity at works	Cost of materials at works	Gross selling value of products at works
							No.
1922	469	118,025	14,085	16,770	1,828	37,650	86,631
