## THE MUSICAL INSTRUIENT INDUSTRY IN CANADA. 1935.

The report on the musical. instrument industry for the year 1985 is presented herewth. This report includes statistics relating to the production of musical instruments of every description, all materials and parts of same, gramophones and phonographs and accessories such as records, cabinets, etc.

Reports were received from flfteen establishments which were located as follows Quebec four, Ontario ten and British Columbia one. This is four leas estabilshments than in 1954.

These iffeen factories represented a total capital investment of $\$ 2,451,6 \% 3$. The total number of person employed was 329 with a payroll amounting to $\$ 286,375$. The cost of materials usee was $\$ 174,797$, whilst the value of production amounted to $\$ 535,668$.

A change was made in the compultion of this industry in 1935. A large firm manufacturing radios and gramophones was transforred to the electrical apparatus industry.

The output of the musical instrument industry whict for some years past had been growing smaller and smalier has in 1935 continued to show a downard trend. The rumber of planos manufactured and in process of manufacture in 1935 was 1,060 vailued at $\$ 3.81,058$ as compared with 1,309 piaros velued at $\$ 240,250$ the previous year, a decrease of over 19 per cent in the number of instruments. The gross value of all products also shows a decrease from $\$ 2,71,7,865$ to $\$ 555,668$ y or more than 80 per cent. Arter allowance is made for the change, slight increases were reported by the remaining firms in the number of employees, salarles and wages, and gross value of production: The main products of this industry, viz., the radios and gramophones, are now produced in the eiectrical apparatus industry. The output of these manufactures, however, cannot be credited to this industry in view of the fact cizat electrical apparatus and not radjos and gramophones form their main products. To get the total output of radios and gramophones, it is necessary to add the productic in the following industries

> Flectrical apparatus and supplies Furniture.

There has also been a correspondiug deciline in the number of employees ard salaries and wages paid. The former fell from 9 ? persons the previous year to 320 In 1955, while the remuneration decreased from \$925, 247 to \$286,375. This represents a decrease of 66 per cent in the number employed and 69 per cent in the total salaries and wages paid.

Xmports of mustay Instruments in 1.935 were valued at $\$ 531_{y} 865$ as compared
 1.935 and $\$ 65,286$ in 1934.

## THE MUSICAL INSTRUMENT INDUSTRY IN CANADA. 1955.

The tables that follow give detailed statistics of production, employment, materials used, capital invested, imports, exports, etc.

## Size of Establishments

In view of the tendency towards concentration in industrial enterprises, a series of tables have been prepared presenting in a threefold way the size of establishments in the musical instrument industry measured by (a) capital investment, (b) gross value of production and (c) the number of persons employed, all within certain specified groups or limitations for the calendar years 1934 and 1935. The tables further indicate the movement of capital, production and employment within the industry.

In 1955 the number of establishments reporting was fifteen, with a total capital investment of $\$ 2,451,673$, a gross value of production of $\$ 555,668$, and a total employment of $529 \ldots$. Elght establishments had a capital investment of $\$ 2,286,443 \mathrm{c}=93$ per cent of the total capitalization, With an average investment per facto J of $\$ 285,805$. Four establishments had a gross value of production of $\$ 311,812$ or 58 per cent of the total output and an everage of $\$ 77,953$ per establishment. In employment seven establishments had 260 persons or 80 per cent of the total employment with an average of 37 per establishment.
