## REPORT

ON THE

## MUSICAL INSTFUMENT INDUSTRY

IN

CANADA

1937
$\qquad$

Price 15 cents

NOTE: - The statistics in this report include only the statistics of those manufacturing establishments whose principal products are musical instruments. Statistics relating to specific products such as radios are not to be regarded as the total for Canade as they are also produced in the "electrical apparatws" and "furniture" industries.

## DEPARTMENT OF TRADE AND COMMERCE DOMINION BUREAU OF STATISTICS GENERAL MANUFACTURES BRANCH OTTAWA - CANADA

Dominion Statistician:
R.H. Coats, W. D., FoR.S.C., F.S.S. (Hon.) Chief, General Manufactures Branch: A. Cohen, B Com.

## THE MUSICAL INSTRUMENT INDUSTFY IN CANADA, 193?.

The report on the musical instrument industry for the year 1937 is presented herewith. This report includes statistics relating to the production of musical instruments of every description, all materials and parta of same, phonographs and accessories, such as records, cabinets, etc.

Reports were received from seventeen establishments which were located as follows: Quebec five, Ontario eleven and British Columbia one. This is two less establishments than in 1936。

These seventeen factories represented a total capital investment of \$2,405317. The number of persons employed totalled 579 with a payroll amounting to $\$ 545,665$. The cost of materials used was $\$ 452,336$ whilst the value of production amounted to \$1,211,288.

The output of the musical instrument industry which for some years past had been growing smaller and smaller has in 1937 shown a marked improvement. The number of planos manufactured and in process of manufacture in 1337 was 4,020 valued at $\$ 601,802$ as compared with 2,096 pianos valued at $\$ 315,045$ the previous year, an increase of over 91 per cent in the number of instruments. The gross value of all products also shows an increase from $\$ 750,916$ to $\$ 1,211,288$ or more than 61 per cent. Marked increases were also reported in the number of employees, salaries and wages, and materials used. The main products of this industry, vizo, the radios and phonographs, are now produced in the electrical apparatus industry. The output of these manufactures, however, cannot be credited to this industry in view of the fact that electrical apparatus and not radios and phonographs form their main products. To get the total output of radios and phonographs; it is necessary to add the production in the following industries.

## Electrical apparatus and supplies. Furniture.

The number of employees and salaries and wages paid rose from 434 persons the previous year to 579 in 1937 while the remuneration increased from $\$ 379,229$ 。to $\$ 545,665$. This represents an increase of 33 per cent in the number employed and 44 per cent in the total salaries and wages paid.

Imports of musical instruments in 1937 were valued at $\$ 1,010,028$ as compared with $\$ 761,822$ in 1936 , while exports amounted to $\$ 77,233$ in 1937 and $\$ 72,606$ in 1936.

The tables that follow give detailed statistics of production, employment, materials used, capital invested, imports, exports, etc。

## Size of Establishments

In view of the tendency towards concentration in industrial enterprises, a series of tables have been prepared presenting in a threefold way the size of establishments in the musical instrument industry measured by (a) capital investment, (b) gross value of production and (c) the number of persons employed, all within certain specifled groups or limitations for the calendar years 1936 and 1937. The tables further indicate the movement of capital, production and employment within the industry.

In 1937 the number of establishments reporting was seventeen with a total capital investment of $\$ 2,405,317$, a gross value of production of $\$ 1,211,288$ and a total employment of 579. Eight establishments had a capital investment of \$2,198536 or 91 per cent of the total capitalization, with an average investment per factory of $\$ 274,817$. Seven establishments had a gross value of production of $\$ 960,488$ or 79 per cent of the total output and an average of $\$ 137,212$ per establishment. In employment ton establishments had 522 persons or 90 per cent of the total employment with an average of 52 per establishment.
