NOTES TO USERS

1. "Explanatory Notes" on selected statistical terms may be found at the back of this publication. These notes are based on the detailed "Concepts and Definitions" which are available free of charge from the Manufacturing and Primary Industries Division of Statistics Canada.
2. Principal statistics of establishments classified by size group, based on total employed, were omitted from industry reports for the years 1968-1971 and principal statistics of establishments by type of organization were last published in the 1967 industry reports. However, this information is available on request from the Manufacturing and Primary Industries Division. In the case of an extensive request, involving a large number of industries or years, it may be necessary to levy a charge.
3. Users interested in obtaining the value of production (manufacturing activity) can do so by adding cost of materials and supplies used (manufacturing activity), cost of fuel and electricity, and value added (manufacturing activity).

NOTES AU LECTEUR

1. On trouvera à la fin de la présente publication l'explication de certains termes statistiques. Ces explications se fondent sur les "Concepts et définitions" détaillés que l'on peut se procurer gratuitement à la Division des industries manufacturières et primaires de Statistique Canada.
2. Les tableaux renfermant les statistiques principales des établissements par tranche de taille mesurée par les effectifs ont été supprimés des publications de 1968 à 1971. Les statistiques principales des établissements selon la forme juridique ont été données pour la dernière fois dans les publications de 1967. On peut toutefois obtenir ces renseignements en s'adressant à la Division des industries manufacturières et primaires. Les demandes élaborées visant un grand nombre d'industries ou d'années pourront entraîner la facturation des frais.
3. Il suffit au lecteur qui désire connaître la valeur de la production (activité manufacturière) d'additionner le coût des matières et fournitures utilisées (activité manufacturière), le coût du combustible et de l'électricité, et la valeur ajoutée (activité manufacturière).

Industry Definition

In terms of the 1970 Standard Industrial Classification, this industry is defined as comprising those establishments primarily engaged in moulding, extruding and fabricating special plastic parts. Establishments primarily engaged in making plastic articles which cannot be classified conveniently elsewhere are included.

Industry Review - 1974

The adjusted value of shipments and work done in 1974 reached \$958.4 million, an increase of \$215.7 million or 28.7% compared to 1973. Some of the larger commodity groupings within the industry showed fairly large increases as follows:

Plastic pipes and pipe fittings: The value of shipments increased by 48.4% moving from \$82.9 million in 1973 to \$123.1 million in 1974. However, in terms of volume, the shipments declined by 6.5% dropping to 177.2 million pounds in 1974 from 189.6 million pounds in 1973, and this decrease, coupled with a 58.7% increase in the average unit price, resulted in the substantial net increase in value.

Plastic Film and Sheet: The volume of shipments declined in 1974 by 7.6%, dropping to 150.6 million pounds from 163.0 in 1973. The average unit price, however, advanced from 42.3¢ in 1973 to 64.3¢ per pound in 1974, an increase of 52.0% and these movements together, resulted in a dollar value increase of 40.4%, as the shipments moved from \$68.9 million in 1973 to \$96.8 million in 1974.

It would appear therefore, in these two groups, as in many other individual commodities produced in this industry, that price increase (inflation) has been responsible for either a substantial portion or all of increase in the value of shipments.

The largest item of input (raw materials) was resins and the consumption of these declined by 17.7% in volume terms (969.1 to 798.2 million pounds) but the value rose by 55.8% (\$180.2 to \$280.8 million), with the average unit price advancing by 89.2% (18.6¢ to 35.2¢ per pound). The ratio of raw materials to production for the industry as a whole advanced to 44.7% in 1974 as against 42.3% in 1973.

The ratio of manufacturing value added to production showed a gain, moving from 42.3% in 1973 to 44.7% in 1974.

The total number of employees engaged in manufacturing operations declined slightly (0.5%) in 1974 compared to 1973 but total wages increased by 12.1% advancing to \$155,449,000 in 1974 as against \$138,638,000 in 1973. The average annual earnings per employee in this category increased by \$810 (12.7%) rising to \$7,187 in 1974, and the average hourly rate rose by 13.2% to \$3.51 from \$3.10 in 1973.

Définition de l'industrie

Selon la Classification des activités économiques de 1970, cette industrie comprend les établissements dont l'activité principale est le moulage, l'extrusion et la fabrication de pièces spéciales en matière plastique. Les établissements dont l'activité principale est la fabrication d'articles en matière plastique qui peuvent difficilement être classés ailleurs sont compris dans cette industrie.

Revue de l'industrie - 1974

Par rapport à 1973, la valeur rectifiée des livraisons et du travail exécuté a augmenté de \$215.7 millions (28.7 %) en 1974 pour atteindre \$958.4 millions. Certains groupes importants de produits de cette industrie ont affiché des hausses assez marquées:

Tuyaux et raccords de tuyauterie en matière plastique: la valeur des livraisons a monté de 48.4 % passant de \$82.9 millions en 1973 à \$123.1 millions en 1974. Toutefois, les livraisons ont accusé une baisse quantitative de 6.5 % pour s'établir à 177.2 millions de livres en 1974 (189.6 millions en 1973). L'augmentation nette de la valeur résulte donc de la différence entre cette baisse et la hausse de 58.7 % au titre des prix moyens à l'unité.

Feuilles et feuilles en matière plastique: Le volume des livraisons a diminué de 16.3 millions de livres en 1973 à 150.6 millions de livres en 1974, une régression de 7.6 %. Le prix moyen à l'unité a cependant augmenté à 64.3¢ la livre en 1974, ce qui constitue une avance de 52.0 % par rapport aux 42.3¢ enregistrés en 1973; tous ces mouvements ont entraîné une hausse de 40.4 % de la valeur des livraisons en dollars; en effet, celle-ci s'est fixée à \$96.8 millions en 1974 contre \$68.9 millions en 1973.

Pour ces deux groupes de produits comme pour d'autres produits particuliers fabriqués par cette industrie, la hausse des prix (inflation) semblerait donc expliquer en grande partie ou en totalité l'augmentation de la valeur des livraisons.

La résine a constitué l'entrée (matière première) la plus importante, mais sa consommation a subi une baisse de 17.7 % (de 969.1 à 798.2 millions de livres entre 1973 et 1974); toutefois, la valeur de cette matière a marqué une hausse de 55.8 %, passant de \$180.2 millions à \$280.8 millions tandis que le prix moyen à l'unité grimpait de 18.6¢ à 35.2¢ la livre, une augmentation de 89.2 %. Le ratio entre les matières premières et la production de l'industrie dans son ensemble a progressé de 44.7 % en 1974, comparativement à une augmentation de 42.3 % en 1973.

Le ratio entre la valeur ajoutée par l'activité manufacturière et la production s'est établi à 44.7 % en 1974. Il était à 42.3 % l'année précédente.

Le nombre total de salariés travaillant à la fabrication a baissé légèrement (0.5 %) entre 1973 et 1974, mais leurs salaires totaux ont augmenté de 12.1 %, passant de \$138,638,000 en 1973 à \$155,449,000 en 1974. Les gains annuels moyens par salarié de cette catégorie ont affiché une hausse de \$810 (12.7 %), pour atteindre \$7,187 en 1974; le taux horaire moyen a puur sa part avancé de 13.2 %, de \$3.10 en 1973 à \$3.51 en 1974.

EXPLANATORY NOTES

The following abbreviated notes deal only with salient points or selected inclusions or exclusions which might not be self-evident. Detailed "Concepts and Definitions" are available on request; see "Notes to Users".

Establishment – Smallest operating unit capable of reporting certain specified input and output data; usually a plant or mill.

Large Establishments

Cost of materials and supplies, fuel and electricity -- Generally, consumption of purchased items only, at laid-down cost. Includes inter-company and intracompany transfers, contract work by others, fuel used by vehicles.

Value of shipments of goods of own manufacture – Goods made by reporting establishment, or for its account, from its own materials, net of discounts, returns, allowances, sales tax, excise taxes and duties, returnable containers, common or contract carriers' charges for outward transportation (but not of own carriers' delivery expense). Includes repair and custom revenue, transfers to reporting units of same firm, all exports, book value of own products shipped on rental basis. Unsold domestic consignment shipments are included in inventory. In fabricated structural metal industry, aircraft and aircraft parts manufacturers, railroad rolling stock industry and shipbuilding and repair, value of production is shown in place of shipments in tables on principal statistics. Integrated smelters' work on own ore valued at imputed charge to mine.

Value added – Net output as measured by gross output less purchased commodity inputs used and contract work by others.

- (a) Value added, manufacturing activity: Value of shipments of goods of own manufacture plus net change in inventory of goods in process and finished goods, less cost of materials and supplies used, fuel and electricity.
- (b) Value added, total activity: Consists of (1) value added, manufacturing activity and (2) value added, non-manufacturing activity. The latter is calculated by subtracting relevant commodity inputs from non-manufacturing revenues or outputs; these commodity inputs are net of the change in inventories of goods purchased for resale. Non-manufacturing revenues include depreciable fixed assets produced by own work force for own use, revenue from product rentals, etc., but exclude non-operating revenue such as real property rentals, dividends, interest.

Employees, salaries and wages – Salaries and wages are reported before deductions for income tax and employee benefits and comprise all man-hours paid (for regular work, overtime and paid leave) as well as bonuses, commissions, etc., paid to regular employees. Where shown, production and related workers classified to non-manufacturing activity include separately reported loggers, employees on construction for own use: beginning with the 1970 Census outside pieceworkers formerly included for certain industries are excluded from all employment totals and their remuneration treated as contract work done by others. Sales and distribution employees include all personnel charged to selling expense, certain drivers, etc.

Inventories – Book value of owned inventory held in Canada, including goods in transit and on consignment.

Small Establishments

For establishments filing "short forms", beginning with 1970 data, "cost of materials, supplies and services" includes all purchased services, and "total revenue excluding interest and dividends received" is used for both shipments of goods of own manufacture and gross output, total activity; value added is calculated using these figures and net change in total inventory, and is thus identical for manufacturing and total activity. Numbers of employees are imputed from reported salaries and wages.

Head offices, sales offices and auxiliary units – Included in the individual industry of the company's largest activity. (The allocation of some such units to the major industry group level was discontinued with the 1970 data).

NOTES EXPLICATIVES

Les notes succinctes ci-après s'arrêtent uniquement aux points saillants et à certaines extensions ou restrictions pouvant nécessiter une explication. Sur simple demande, on pourra obtenir les "Concepts et définitions" détaillés; se reporter aux "Notes au lecteur".

Établissement – Plus petite unité exploitante en mesure de fournir certaines données sur ses facteurs de production (entrées) et sur sa production (sorties); en général: usine ou fabrique.

Grands établissements

Coût des matières et fournitures, du combustible et de l'électricité – De manière générale, concerne uniquement la consommation de produits achetés, au prix franco. Comprend les transferts entre filiales et établissements d'une société, les travaux exécutés par d'autres aux termes d'un contrat et la consommation de carburant, par les véhicules.

Valeur des livraisons de produits de propre fabrication – Concerne les produits fabriqués par l'établissement enquêté, ou pour son compte, à partir de matières lui appartenant, déduction faite des rabais, des retours de marchandises, des remises, des taxes de ventes, des taxes et des droits d'accise, des emballages consignés, des frais de livraisons payés à des transporteurs publics ou sous contrat (mais non des frais de livraisons de l'établissement même). Comprend les recettes de réparations et de contrats, les transferts à d'autres unités enquêtées de la même firme, les exportations, la valeur comptable des produits donnés en location par l'établissement. Les livraisons sans vente en consignation au Canada sont prises en compte dans les stocks. En ce qui concerne l'industrie de la fabrication d'éléments de charpente métallique, les fabricants d'aéronefs et de pièces, les fabricants de matériel ferroviaire roulant ainsi que l'industrie de construction et réparation de navires, la valeur de la production remplace les livraisons dans les tableaux relatifs aux statistiques principales. Pour déterminer la valeur du travail effectué par une fonderie intégrée sur du minerai lui appartenant, on calcule le coût qu'il faudrait imputer à la mine.

Valeur ajoutée – Sortie nette, soit sortie brute moins consommation de biens achetés et travaux exécutés par d'autres sous contrat.

- a) **Valeur ajoutée, activité manufacturière:** valeur des livraisons de produits de propre fabrication, plus variation nette des stocks de produits en cours et de produits finis, moins coût des matières et des fournitures utilisées, du combustible et de l'électricité.
- b) **Valeur ajoutée, activité totale:** comprend (1) la valeur ajoutée par l'activité manufacturière et (2) la valeur ajoutée par l'activité non manufacturière. Cette dernière s'obtient en soustrayant les entrées de marchandises des recettes ou des sorties provenant de l'activité non manufacturière, après avoir soustrait de ces entrées la variation des stocks de produits achetés pour la revente. Les recettes provenant de l'activité non manufacturière comprennent les éléments d'actif amortissable produits par la main-d'œuvre de l'établissement pour son usage propre, les recettes de location de produits, etc., mais non les recettes hors-exploitation, comme les loyers d'immeubles, les dividendes, les intérêts.

Salariés, traitements et salaires – Les traitements et salaires sont pris en compte avant les retenues au titre de l'impôt sur le revenu et des avantages sociaux des employés; ils comprennent les heures-hommes payées (heures normales, supplémentaires et congés payés) ainsi que les gratifications, commissions, etc., versées aux salariés. Les travailleurs de la production et assimilés classés dans l'activité non manufacturière comprennent les bûcherons, les ouvriers de la construction pour le compte de l'établissement, etc., lorsqu'ils ont été déclarés séparément; à partir du recensement de 1970, les ouvriers à la pièce de l'extérieur, autrefois classés dans certaines industries, ne sont plus compris dans la statistique de l'emploi et leur rémunération a été prise en compte au titre des travaux sous contrat exécutés par des tiers. Les employés à la vente et à la distribution comprennent tout le personnel imputé aux frais de vente, certains chauffeurs, etc.

Stocks – Valeur comptable des stocks détenus en toute propriété au Canada, y compris les marchandises en transit ou en consignation.

Petits établissements

Pour les établissements qui remplissent une "formule abrégée", le coût des matières, fournitures et services" comprend, à partir des données de 1970, tous les services achetés, et le "total des recettes, sauf sous forme d'intérêts et de dividendes" vaut à la fois pour les livraisons de marchandises de propre fabrication et pour la production brute de l'activité totale; la valeur ajoutée est calculée à partir de ces chiffres et de la variation nette des stocks et est donc identique pour l'activité manufacturière et pour l'activité totale. Le nombre de salariés est déterminé à partir des rémunérations déclarées.

Sièges sociaux, bureaux de vente et unités auxiliaires – Classés avec l'industrie qui représente l'activité principale de la société. (Le classement de certaines unités au niveau des groupes a cessé à partir des données de 1970).
