Vol. 2, No. 1

### RESIDENTIAL BUILDING CONSTRUCTION INPUT PRICE INDEXES

1971=100

This issue of the Service Bulletin updates to September 1972 the revised Residential Construction Input Indexes to a 1971=100 base issued earlier this year. The basis of the revision can be found in the reference document accompanying the initial release of the revised series, Construction Price Statistics, Service Bulletin 62-006, Vol. 1, No. 7.

Historical continuity of the previously published index 1961=100 will be maintained at the total level only and published in Table 20 of Prices and Price Indexes, Publication 62-002. The revised indexes 1971=100 will be published in summary form monthly in Prices and Price Indexes beginning with the March 1973 issue. Table 3 of this issue of the Service Bulletin provides a comparison between the original and revised indexes from January 1971 to September 1972 for the convenience of users.

#### Price Movements

The Residential Building Input Price Index for Canada (1971=100) rose 1.2 per cent to 112.3 in September from 111.0 in July. This increase was accounted for entirely by the movement in the Materials Input index which rose 1.8 per cent to 112.4. The Labour index remained unchanged over the period.

All regions recorded index movements at the total level over the two month period. The largest single change occurred in Quebec which showed a point increase of 2.1. In rank order the Atlantic Region reported an increase of 1.5 points, the British Columbia Region an increase of 1.3, the Ontario Region an increase of 1.0 and the Prairie Region an increase of 0.6.

### INDICES DE PRIX DES ENTRÉES DANS LA CONSTRUCTION RÉSIDENIELLE

1971=100

Cette livraison du bulletin de service met à jour jusqu'en septembre 1972 les indices de prix des entrées dans la construction résidentielle publiés plus tôt cette année, sur la base 1971=100. Le mode de révision est expliqué dans le document de référence qui accompagne la première publication des séries révisées du bulletin de service, intitulé Statistiques des prix dans la construction, numéro 62-006 au catalogue, Vol. 1, n° 7.

La continuité chronologique de l'indice publié précédemment, sur la base 1961=100, ne sera maintenue qu'au niveau global et paraîtra dans le Tableau 20 de la publication Prix et indices des prix (n° 62-002). Quant aux nouveaux indices sur la base 1971=100, ils seront publiés chaque mois en abrégé dans la même publication, à compter de la livraison de mars 1973. Pour la commodité des utilisateurs, le Tableau 3 du présent bulletin établit une comparaison entre les indices originaux et ceux qui ont été révisés de janvier 1971 à septembre 1972.

#### Mouvement des prix

L'indice de prix des entrées dans la construction résidentielle au Canada (1971=100) a augmenté de 1.2 %, passant de 111.0 en juillet à 112.3 en septembre. Cette augmentation est entièrement imputable au mouvement de l'indice des prix des entrées de matériaux, qui a progressé de 1.8 % pour atteindre 112.4. Pour ce qui est de la main-d'oeuvre, l'indice est resté inchangé au cours de cette période.

Au cours de cette période de deux mois, on a constaté des variations au niveau global des indices dans toutes les régions. La variation la plus importante a été observée dans le Québec, où il y a eu une augmentation de 2.1 points. Par ordre d'importance, la hausse était de 1.5 points dans la région de l'Atlantique, de 1.3 dans la région de la Colombie Britannique, de 1.0 dans la région de l'Ontario et de 0.6 dans la région des Prairies.

(1) Trades excluded from the main trades list but included in the Canada Total Indexes are: Excavation, foundation drainage, waterproofing, metal siding, plastering, ceramic tiling, ornamental ironworks and sheet metal works. These trades together account for the residential index weight of 16.5. - Les métiers suivants ont été exclus de la liste des principaux métiers mais non de l'indice total du Canada: l'excavation, le drainage de fondation, l'imperméabilisation, le parement métallique, le plâtrage, le carrelage en céramique, le fer forgé ornemental et la ferblanterie. Ces métiers ont globalement compté pour 16.5 % de l'indice pondéré résiduel.
