Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Capital Expenditures Prices Section,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 996-3744) or to the Statistics Canada reference centre in:

| | |
|-----------------------|---------------------------|
| St. John's (772-4073) | Sturgeon Falls (753-4888) |
| Halifax (426-5331) | Winnipeg (949-4020) |
| Montréal (283-5725) | Regina (359-5405) |
| Ottawa (992-4734) | Edmonton (420-3027) |
| Toronto (966-6586) | Vancouver (666-3691) |

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

| | |
|---|--------------------|
| Newfoundland and Labrador | Zenith 0-7037 |
| Nova Scotia, New Brunswick and Prince Edward Island | 1-800-565-7192 |
| Quebec | 1-800-361-2831 |
| Ontario | 1-800-268-1151 |
| Manitoba | 1-800-282-8006 |
| Saskatchewan | 1(112)800-667-3524 |
| Alberta | 1-800-222-6400 |
| British Columbia (South and Central) | 112-800-663-1551 |
| Yukon and Northern B.C. (area served by NorthwTel Inc.) | Zenith 0-8913 |
| Northwest Territories (area served by NorthwTel Inc.) | Zenith 2-2015 |

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7.

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographique sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolinguée et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des prix des immobilisations,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 996-3744) ou au centre de consultation de Statistique Canada à:

| | |
|-----------------------|---------------------------|
| St. John's (772-4073) | Sturgeon Falls (753-4888) |
| Halifax (426-5331) | Winnipeg (949-4020) |
| Montréal (283-5725) | Regina (359-5405) |
| Ottawa (992-4734) | Edmonton (420-3027) |
| Toronto (966-6586) | Vancouver (666-3691) |

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux utilisateurs qui habitent à l'extérieur des zones de communication locale des centres régionaux de consultation.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- † revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

FOR FURTHER INFORMATION

CANSIM

For further information write to CANSIM, Current Economic Analysis Division, Statistics Canada, Ottawa, K1A 0Z8 or call (613) 995-7406.

The Databank identification numbers, by which figures may be retrieved from CANSIM are given in the headings of each series shown in the publication.

CANSIM matrix numbers are as listed below:

| Table | Matrix number |
|---------|------------------|
| 1 | 655 to 694 |
| 2 and 3 | 956 to 963 |
| 4 | 2560 |
| 5 and 6 | 3775 to 3786 |
| 7 | 96 and 97 |
| 8 and 9 | 966 and 967 |
| 10 | 1794 |
| 11 | 85 |
| 12 | 297 to 299 |
| 13 | 125 |
| 14 | 126 |
| 15 | 527 to 529, 3781 |
| 16 | 527 to 529, 967 |
| 17 | 120 |
| 18 | 118 |
| 19 | 119 |
| 20 | 121 |
| 21 | 38 |
| 22 | 527 to 529 |
| 23 | 4027 and 4040 |
| 24 | 4000 and 4001 |
| 25 | 4002 and 4003 |

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- † nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

RENSEIGNEMENTS SUPPLÉMENTAIRES

CANSIM

Pour plus de renseignements, écrivez à CANSIM, Division des analyses de conjoncture, Statistique Canada, Ottawa, K1A 0Z8, ou téléphonez à (613) 995-7406.

Les numéros d'indentification de la Databank qui servent à retrouver les chiffres de CANSIM sont inscrits à l'en-tête de chaque série de la publication.

Les numéros des matrices de CANSIM sont donnés ci-dessous:

| Tableau | N ^o de matrice |

INTRODUCTION

This report contains measures of price change over time for elements of construction costs, for outputs of industries specializing in construction work and for categories of capital expenditure including machinery and equipment.

Elements of construction costs whose price changes are shown here include those industries which produce most of the construction materials in Canada, unionized building tradesmen, and interest rates. Indexes derived from these have been worked up into measures of price change for inputs into single family houses (Tables 5 and 6) and non-residential buildings (Tables 7, 8 and 9). Measures of price change for the output of industries producing construction cover single family houses (Tables 10 and 11) and selected non-residential buildings (Table 12). Indexes are also shown for two industries whose outputs are used widely in both building and engineering construction: structural steel and pre-cast concrete. Measures of price change for engineering construction for highways and electric utilities are not shown in this section, but are embodied later in indexes pertaining to capital expenditures.

Price changes for capital expenditures are classified, as in the system of national accounts, into construction and machinery and equipment. Implicit price indexes derived from the national accounts are reproduced with price index elements most closely associated with them. Finally measures applying to total capitalized cost for certain categories of investment are shown on Tables 18 to 21, for electric utilities, process industries, chemical and petrochemical industries, and telecommunications.

These figures may be used in the analysis of price change in construction and fixed capital formation, for contract escalation, and for estimates of reproduction cost, either for recosting budgets or for revaluing fixed assets. Care should be taken in the selection of the most appropriate index, particularly in comparing one type of index with another; for instance input indexes with output indexes, or direct price indexes

INTRODUCTION

Ce bulletin mesure l'évolution du prix des diverses composantes des travaux de construction, des sorties de l'industrie de la construction et des catégories de dépenses en immobilisations ainsi que les machines et le matériel.

Les composantes des travaux de construction dont les variations de prix sont indiquées ici sont les principaux fabricants de matériaux de construction au Canada, les travailleurs syndiqués de la construction et les taux d'intérêt. Les indices tirés de ces composantes ont été transformés en mesures des coûts des entrées pour les maisons unifamiliales (tableaux 5 et 6) et les immeubles non résidentiels (tableaux 3, 8 et 9). Les mesures de la variation des prix de la production de l'industrie de la construction prennent en compte les maisons unifamiliales (tableaux 10 et 11) et certains immeubles non résidentiels (tableau 12). Des indices sont également fournis relativement à deux industries dont les produits sont largement utilisés dans la construction d'immeubles et les travaux de génie, à savoir l'acier de charpente et le béton précontraint. Les mesures de l'évolution des prix relativement aux travaux de génie pour les routes et les services d'électricité ne figurent pas dans cette section, mais sont présentées plus loin dans les indices relatifs aux dépenses en immobilisation.

Pour ces dernières, les mesures de l'évolution des prix distinguent, comme dans la comptabilité nationale, la construction des machines et du matériel. Les indices implicites de prix extraits des comptes nationaux sont accompagnés d'éléments d'indices de prix ayant souvent un lien étroit avec eux. Enfin, des mesures concernant le coût total capitalisé de certaines catégories d'investissements sont fournies aux tableaux 18 à 21, pour les services d'électricité, les industries de transformation, les industries chimiques et pétrochimiques et les télécommunications.

Ces chiffres sont présentés en vue de l'analyse des variations des prix de la construction et de la formation de capital fixe, de l'indexation des contrats et des estimations des coûts de reproduction, en vue soit d'une révision du budget, soit de la réévaluation des immobilisations. Il faut se montrer prudent dans le choix de l'indice le plus approprié, surtout quand il s'agit de comparer des indices de types différents, comme les indices des entrées et ceux des sorties

with the implicit price indexes. The technical notes at the end of this publication give a summary of the characteristics of the various indexes, but for further explanation the reference documents or the staff of the Prices Division should be consulted.

This publication is produced on a monthly basis, and is distributed towards the end of each month. There is not enough space to print all the component or historical detail available. A description of additional information related to these indexes is presented in the technical notes. All publishable information is accessible, however, on CANSIM, often about a month earlier than it appears here. An advance notice appears in the *Statistics Canada Daily Catalogue* 11-001E. The matrix numbers in CANSIM on which these figures appear are listed in Symbols and the Databank numbers for particular series are given wherever possible on each table.

Revisions

These indexes are aggregations of representative price movements combined as weighted averages. Revisions to published weights are restricted to major renovations of statistical series. Such changes are described in technical descriptions available at the time of first release of a new or revised series of indexes.

Revisions to prices are a regular part of index production. Generally, monthly indexes are subject to revisions for six months and quarterly indexes for two quarters. Some indexes are subject to different, usually more restrictive, revision procedures and these procedures are described in the technical notes. The symbol "r" only appears when revisions have been made outside the limits normally applying for that table.

The dates for which figures are final for each table are given below:

Table

| | |
|-----------|--------------------|
| 1 | February 1983 |
| 2 and 3 | May 1982 |
| 4 | to date |
| 5 and 6 | March 1983 |
| 7 to 9 | February 1983 |
| 10 and 11 | to date |
| 12 | First Quarter 1983 |
| 13 | to date |
| 14 | to date |
| 17 | to date |
| 18 | 1981 |

| 20 | First Quarter 1983 |
| 21 | 1976 |
| 23 to 25 | First Quarter 1982 |

ou les indices directs et les indices implicites des prix. Les notes techniques données à la fin de la publication résument les caractéristiques des divers indices, mais il faut consulter les documents de référence ou le personnel de la Division des prix pour obtenir des explications supplémentaires.

Le présent bulletin est mensuel et est distribué vers la fin de chaque mois. Le manque d'espace ne permet pas d'imprimer tout le détail des composantes ni des données historiques. Les notes techniques fournissent des renseignements additionnels sur ces indices. Toutefois, on peut obtenir de CANSIM tous les renseignements publiables, fréquemment un mois plus tôt que dans cette publication. La parution de celle-ci est annoncée à l'avance dans *Le Quotidien de Statistique Canada* (n° 11-001F au catalogue). Le numéro des matrices de CANSIM contenant ces chiffres est indiqué aux Signes conventionnels; l'indication des numéros Databank des diverses séries accompagne les tableaux chaque fois que cela est possible.

Révisions

Ces indices sont des moyennes pondérées de mouvements globaux de prix représentatifs. Les pondérations publiées ne sont révisées que lors de refontes des séries statistiques. Un exposé technique de ces changements est disponible au moment de la première parution des séries nouvelles ou révisées.

Les révisions des prix constituent une partie normale de la production d'indices. En général, les indices mensuels sont sujets à des révisions pendant six mois et les indices trimestriels, pendant deux trimestres. Les procédures de révision sont parfois différentes, généralement plus restrictives; elles sont décrites dans les notes techniques. Le symbole "r" est utilisé uniquement quand des révisions ont été faites en dehors des délais ordinaires pour le tableau concerné.

Voici, pour chaque tableau, la date où les chiffres deviennent définitifs:

Tableau

(1) Effective July 1981, average yield rates are based on a revised bond portfolio. Indexes based on the new and the old series are linked at July 1981.

(1) À compter de juillet 1981, le calcul des taux de rendement moyens se fonde sur un nouveau portefeuille d'obligations. Le raccordement des deux séries d'indices est fait à la date juillet 1981.

Note

CANSIM references are to the Bank of Canada rate series.

Characteristics:

Conventional mortgages. A simple average of rates (5 year term) charged by institutional lenders for residential mortgage loans (CMHC).

Prime business loans. Rate of interest charged the most credit worthy large business borrowers by the chartered banks. The rate shown is a month end rate (Bank of Canada).

Bond yield averages. Currently, 50 provincials - yields related to the last Wednesday of the month on a selected portfolio of bonds with a remaining term to maturity of 15 years or more (McLeod, Young, Weir).

Exchange rate. Value of U.S. dollar in Canadian funds at noon quotation on 15th of the month, or the next following business day.

Source: Bank of Canada Review, Table 20.

Nota

Les références de CANSIM s'appliquent aux séries sur les taux de la Banque du Canada.

Caractéristiques:

Prêts hypothécaires ordinaires. Taux d'intérêt moyen (terme de 5 ans) pratiqué par les établissements de prêts pour des prêts hypothécaires domiciliaires (SCHL).

Taux d'intérêt privilégiés sur les prêts aux entreprises. Taux d'intérêt réservé par les banques à charte aux entreprises dont le crédit est de tout premier ordre. Le taux porté en indice est le taux en fin de mois (Banque du Canada).

Moyennes de rendement des obligations. Actuellement, 50 émissions provinciales - taux de rendement le dernier mercredi du mois d'un portefeuille d'obligations sélectionnées arrivant à échéance dans 15 ans ou plus.

Cours du change. Valeur du dollar américain en monnaie canadienne selon le cours à midi le 15 de chaque mois ou le jour ouvrable suivant.

(1) Trades excluded from the main trades list but included in the Canada total indexes are: excavation, foundation-drainage, waterproofing, metal siding plastering, ceramic tiling, hardwood flooring, ornamental ironworks and sheet metal works. These trades together account for the residual index weight of 9.9%. A main trade includes activity by both the general contractor and the sub-trade contractor.

(1) Les métiers suivants ne figurent pas sur la liste des principaux corps de métiers, mais sont pris en compte dans les indices totaux pour le Canada: l'excavation, le drainage de fondation, l'imperméabilisation des revêtements, le parement métallique, le plâtrage, le carrelage en céramique, le couvre-sol en bois dur, le fer forgé et la ferblanterie. Ces métiers rendent compte du coefficient résiduel de 9.9% de pondération des indices. Un corps de métier principal comprend l'activité des entrepreneurs généraux et celle des sous-traitants.

TABLE 7. Non-residential Building Construction Input Price Indexes, 1971 = 100(2)

TABLEAU 7. Indices de prix des entrées dans la construction non résidentielle, 1971 = 100(2)

(1) Computational errors necessitate the revision of 1981 and 1982 data. The amended figures already appear on CANSIM, are available on request, and will appear in the November issue.

(1) En raison d'erreurs de calcul, il a fallu réviser les données de 1981 et 1982. Les chiffres corrigés sont déjà dans CANSIM et sont disponibles sur demande. Ils paraîtront dans le numéro de novembre.

(1) The weights shown in this column represent the relative importance of each city in the Canada total for the composite, house and land indexes respectively. The three regions excluded from the list but included in the Canada composite index, Northern Ontario, New Brunswick and Prince George, account for the residual weight for the composite, 3.79 for the house and 2.88 for the land.

(1) Les pondérations données dans cette colonne représentent l'importance relative de chaque ville dans l'indice d'ensemble, l'indice des logements et l'indice des terrains pour tout le Canada. Les trois régions exclues de cette liste, mais incluses dans l'indice d'ensemble pour le Canada, à savoir le nord de l'Ontario, le Nouveau-Brunswick et Prince George, figurent pour la pondération résiduelle: 3.54 (indice d'ensemble), 3.79 (logement) et 2.88 (terrains).

(2) Average relative values of house and land in 1976. It should be noted that the averages are not comparable between cities since they reflect different mixes of single, semi-detached and row housing. See also explanatory and source notes for this table. These component indexes carry a lower level of reliability than the total, users should treat them with caution.

(2) Valeur relative moyenne des logements et des terrains en 1976. Il convient de noter que les moyennes ne se comparent pas d'une ville à l'autre, car elles portent chacune sur un mélange différent de maisons individuelles, jumelées et en rangée. Voir les notes explicatives et les notes sur les sources relatives au présent tableau. Ces composantes sont moins fiables que l'indice global, et l'on doit se montrer prudent dans leur utilisation.

(3) Because of the size or organization of the market the criteria for excluding builders in the sample as described in the reference paper have had to be relaxed in these cities.

(3) Vu la taille ou la structure du marché des villes en cause, il a fallu assouplir les critères servant à inclure les constructeurs dans l'échantillon et décrits dans le document de référence.

(4) Unserviced lots, usually for Québec and Montréal.

(4) Terrains non viabilisés, habituellement à Québec et à Montréal.

(1) These are the only series with a substantial history prior to 1971. For more recent indicators see also Table 11.

(1) Il s'agit des seules séries dont les chiffres antérieurs à 1971 sont utilisés. Consulter le tableau 11 pour des indicateurs plus récents.

(2) These current-weighted indexes are derived from the current estimates by the constant dollars estimates of residential gross fixed capital formation in the National Income and Expenditure Accounts.

(2) On obtient ces indices à pondération courante en divisant les estimations courantes par les estimations en dollars constants de la formation brute de capital fixe dans le secteur résidentiel des Comptes nationaux des revenus et des dépenses.

(3) These fixed-weighted price indexes relate to the use of materials, labour and equipment used in the construction of residential buildings in Canada in 1969. Materials prices are manufacturers' new order selling prices. Materials indexes are adjusted as relevant for changes in federal sales taxes. Wage rates are basic rates taken from union contracts relating to main trades of importance in residential construction.

(3) Ces indices des prix à pondération d'année fixe se rapportent aux matériaux, à la main-d'oeuvre et au matériel employés au Canada en 1969 dans la construction de bâtiments résidentiels. Les prix des matériaux sont les prix de vente des nouvelles commandes chez les fabricants. Les indices des prix des matériaux sont ajustés en fonction des variations de la taxe fédérale de vente. Les taux de salaire sont les taux de base tirés des conventions collectives dans les principaux corps de métiers de la construction résidentielle.

(4) Weights are: (i) before 1971, materials 42.68, labour 57.32; (ii) 1971 and after, materials 64.1, labour 35.9.

(4) Les indices à pondération utilisés sont les suivants: (i) avant 1971, matériaux 42.68, main-d'oeuvre 57.32; (ii) 1971 et après matériaux 64.1 main-d'oeuvre 35.9.

(1) These are the only series with a substantial history prior to 1971. For more recent indicators see also Table 12.

(2) Il s'agit des seules séries dont les chiffres antérieurs à 1971 sont utilisés. Consulter le tableau 12 pour des indicateurs plus récents.

(3) These current-weighted indexes are derived from preparation of current and constant dollar estimates on non-residential business gross fixed capital formation in the National Income and Expenditure Accounts. Non residential is defined here to include engineering construction as well as non-residential building construction.

(4) On tire ces indices à pondération courante des estimations en dollars courants et constants de la formation brute de capital fixe des entreprises dans le secteur non résidentiel des Comptes nationaux des revenus et des dépenses. La construction non résidentielle regroupe ici les ouvrages d'art et les bâtiments non résidentiels.

(5) These fixed-weighted price indexes relate to the use of materials, labour and equipment used in the construction of non-residential buildings in Canada in 1971. Materials prices are manufacturers' new order selling prices. Materials indexes are adjusted as relevant for changes in federal sales taxes. Wage rates are basic rates taken from union contracts relating to main trades of importance in non-residential construction.

(6) Ces indices de prix à pondération d'année fixe se rapportent aux matériaux, à la main-d'oeuvre et au matériel employés au Canada en 1971 dans la construction de bâtiments non résidentiels. Les prix des matériaux sont les prix de vente de nouvelles commandes chez les fabricants. Les indices des prix des matériaux sont ajustés en fonction des variations de la taxe fédérale de vente. Les taux de salaire sont les taux de base tirés des conventions collectives dans les principaux corps de métiers de la construction non résidentielle.

(7) Weights are: (1) 1935-1970, materials 43.57, labour 56.43; (11) 1971 and after, materials 52.56, labour 47.44.

(8) Les indices à pondération utilisés sont les suivants: (1) 1935-1970, matériaux 43.57, main-d'oeuvre 56.43; (11) 1971 et après matériaux 52.56, main-d'oeuvre 47.44.

(9) Computational errors necessitate the revision of 1981 and 1982 data. The amended figures already appear on CANSIM, are available on request, and will appear in the November issue.

(10) En raison d'erreurs de calcul, il a fallu réviser les données de 1981 et 1982. Les chiffres corrigés sont déjà dans CANSIM et sont disponibles sur demande. Ils paraîtront dans le numéro de novembre.

(1) The Canada index is a weighted average of all province indexes (excluding Prince Edward Island) from 1971. Prior to 1964 it was a composite of seven provinces; Quebec was added in 1964 and Alberta in 1971.

(2) L'indice pour le Canada représente à partir de 1971, la moyenne pondérée de tous les indices provinciaux (sauf celui de l'Île-du-Prince-Édouard) avant 1964, l'indice prenait en compte sept provinces; on y a ajouté le Québec en 1964 et l'Alberta en 1971.

(3) All data refers, to fiscal year.

(4) Toutes les données se rapportent à l'année financière.

(5) Although the techniques for constructing these price indexes remains substantially unchanged, those for 1980 and 1981 have been calculated using all bid data whereas in earlier years prices were edited to eliminate extreme values. This change has been made because, recently, the greater volatility of bid prices has made it very difficult to establish editing criteria.

(6) Même si les techniques utilisées pour l'établissement de ces indices de prix demeurent essentiellement inchangées, on a utilisé l'ensemble des données sur les soumissions pour calculer les indices de 1980 et 1981, sans effectuer des vérifications pour éliminer les valeurs extrêmes comme c'était le cas par les années passées. Ce changement a été dicté par la grande instabilité des prix des soumissions observées récemment qui rend très difficile l'établissement de critères de vérification.

EXPLANATORY AND SOURCE NOTES

Unless otherwise stated, details as shown in this publication are available in the same form from at least the time reference period (usually 1971 or 1976). All figures printed here are available on CANSIM, and a guide to which CANSIM matrices carry them can be found under "For Further Information". Most further information referred to below is also available on CANSIM, but users are advised to contact the Prices Division before using it because its reliability of methodology may be different from the description of the current indexes. The general revision policies are as follows: for monthly indexes, the last six months are subject to revision; for quarterly indexes, the last two quarters. Exceptions to this are described in the notes below. A table showing the latest period for which figures are final for each table is given under "Revisions".

Most indexes in this publication have been calculated using a fixed weighted formula of the type described below. The characteristics of each index are explained in terms of the representative price series which are used, and the weights used to combine them. These notes are summaries of the methodology used. For a fuller explanation, readers are referred to the relevant reference paper for each index; a consolidated list follows these notes.

Index Formula

Unless otherwise stated, price indexes included in this publication have been calculated using a based weighted formula of the following general type.

$$I_t = \sum_{i=1}^n W_i (P_{t/o})_i$$

where I_t is the price index in time t related to time base period o

$\sum_{i=1}^n$ is summation over all commodities, $i=1, 2, \dots, n$.

$(P_{t/o})_i$ is the ratio of prices of each commodity i between the time base period o and the period t

NOTES EXPLICATIVES ET NOTES SUR LES SOURCES

Sauf indications contraires, les renseignements fournis dans le présent bulletin peuvent être obtenus sous la même forme au moins à partir de la période de référence (généralement 1971 ou 1976). Tous les chiffres indiqués ici sont versés dans CANSIM; on trouvera sous "renseignements supplémentaires" l'indication des matrices CANSIM qui les contiennent. On peut également obtenir de CANSIM la plupart des renseignements supplémentaires qui seront mentionnés plus bas, mais les utilisateurs sont invités à communiquer avec la Division des prix avant de recourir à CANSIM parce que le degré de fiabilité ou la méthodologie peuvent ne pas correspondre à la description des indices courants. En général, les indices sont susceptibles d'être révisés pendant les périodes suivantes: indices mensuels, les six derniers mois; indices trimestriels, les deux derniers trimestres. Les notes signalent les exceptions à cette règle. "Révisions", un tableau indique la dernière période pour laquelle les chiffres fournis sont définitifs.

La plupart des indices de cette publication ont été calculés au moyen d'une formule à pondération fixe, semblable à celle qui est décrite ci-dessous. Les caractéristiques de chacun sont expliquées en fonction des prix représentatifs qui sont utilisés et des coefficients qui ont servi à les combiner. Ces notes résument la méthodologie employée. Pour une explication plus complète, les lecteurs sont priés de consulter le document de référence concernant chaque indice; une liste de ces derniers suit les notes.

Formule de l'indice

Sauf indication contraire, les indices des prix figurant dans la présente publication ont été calculés à l'aide d'une formule à pondération de base du type général suivant.

$$I_t = \sum_{i=1}^n W_i (P_{t/o})_i$$

où I_t est l'indice de prix à la période t par rapport à la période de base o

$\sum_{i=1}^n$ est la somme de tous les produits, $i=1, 2, \dots, n$.

$(P_{t/o})_i$ est le rapport des prix de chaque produit i entre la période de base o et la période t

and W_i is the weight, or relative importance of commodity i

$$W_i = \frac{(P_0 \cdot Q_k)_i}{\sum (P_0 \cdot Q_k)_i} ; \sum_{i=1}^n W_i = 1.00$$

where $(P_0 Q_k)_i$ is the total expenditure in period k on the i th commodity, expressed in base period prices.

Table 1. Selling Price Indexes

These series are a selection from the system of Manufacturers' Selling Price Indexes, published in **Industry Price Indexes** (Catalogue 62-011), chosen as typical inputs of the construction industry or associated with home ownership. They measure price change of new order selling prices of important commodities sold by major manufacturing establishments, classified according to the 1970 Standard Industrial Classification. Prices are for new orders, net (discounts allowed) as of the middle of the month, f.o.b. plant. Sales taxes are excluded. Weights for establishments and commodities currently being employed for indexing purpose are generally derived from the 1971 Census of Manufacturing Values; in some cases they have been revised on 1976 values.

Further data. Historical data is available from 1956 or later, on a 1971 base in **Industry Price Indexes: Manufacturing, 1956-1976** (Catalogue 62-543). Other commodity detail is available on request from the Prices Division.

Tables 2 and 3. Union Wage Rate Indexes

These series are derived mainly from those published in the **Construction Collective Agreement Survey Service** provided by the Canadian Construction Association. The collective agreements cover tradesmen engaged in building construction. Sixteen main trades are surveyed in 22 metropolitan areas. Two rates are indexed. The basic rates indicate the straight time hourly compensation. The supplements included in the "indexes including selected pay supplements" are as follows: vacation pay, statutory holiday pay, pension contribution, employers' contribution to private plans, health and welfare, employers' contribution, industry promotion fund, training fund. Weights are based on estimates of gross earnings of each trade in each metropolitan area, derived from 1971 Census data.

et W_i est le poids, ou l'importance relative du produit i

$$W_i = \frac{(P_0 \cdot Q_k)_i}{\sum (P_0 \cdot Q_k)_i} ; \sum_{i=1}^n W_i = 1.00$$

où $(P_0 Q_k)_i$ est la dépense totale de la période k au titre du produit, exprimée selon les prix de la période de base.

Tableau 1. Indices des prix de vente des manufacturiers

Ces séries ont été choisies parmi les indices des prix de vente des manufacturiers publiés dans le bulletin **Indices des prix de l'industrie** (n° 62-011 au catalogue); leur choix représente des entrées typiques de l'industrie de la construction, ou des entrées associées à la propriété. Elles mesurent la variation des prix de vente des nouvelles commandes de marchandises importantes par les grands établissements manufacturiers, groupés selon la Classification des activités économiques de 1970. Les prix sont les prix nets des nouvelles commandes (après escompte) au milieu du mois (f.o.b. usine); ils ne comprennent pas les taxes de vente. Les pondérations des établissements et des marchandises qui servent actuellement à produire les indices sont fondées sur les résultats du recensement des manufactures de 1971; en certains cas ils ont été révisées sur les valeurs de 1976.

Données supplémentaires. Des données historiques sur la base de 1971 sont présentées dans le n° 62-543 au catalogue, **Indices des prix de vente dans l'industrie: industries manufacturières, 1956-1976**. D'autres renseignements sur les marchandises peuvent être obtenus de la Division des prix.

Tableaux 2 et 3. Indices des salaires syndicaux

Ces séries sont tirées principalement de celles contenues dans la publication **Construction Collective Agreement Survey Service** de l'Association canadienne de la construction. Les conventions collectives concernent les travailleurs du bâtiment. Seize grands corps de métiers sont enquêtés dans 22 régions métropolitaines. Deux barèmes salariaux font l'objet d'un indice. Les taux de base indiquent la rémunération horaire à taux simple. Les avantages compris dans les indices englobant certains suppléments sont les congés annuels payés, les jours fériés payés, les contributions au régime de pension, la contribution des employeurs à des régimes privés, contributions des employeurs à l'assurance-maladie et au fonds de prévoyance sociale, caisse de promotion industrielle, caisse de formation. Les pondérations sont fondées sur les estimations des gains bruts de chaque corps de métiers choisi dans chaque région métropolitaine qui ont été tirées du recensement de 1971.

Revisions. May occur outside the normal limits if there are retroactive wage settlements.

Further data. Details on rates and indexes for individual trades from 1971 onwards are available monthly on CANSIM or from Prices Division. Annual figures from 1950 to 1971 are available for 12 trades in 14 cities.

Table 4. Selected Financial Indexes

Indexes for NHA mortgage rates are available only to June 1981. They are based on a rate series compiled by CMHC as the average of rates charged by approved lenders. As of that date CMHC no longer considered this to be an appropriate indicator and discontinued it. The average bond yield rate used since July 1981 results from a different portfolio than that used previously. This newer series of yields has been calculated since November 1977. The resulting index series has been linked with the one previously published as of July 1981. The selected rates on which the indexes are based are taken from the **Bank of Canada Review**. A more complete description of the characteristics of these data may be found in the footnotes to Table 20 of the Review. The historical rate data for all series except the exchange rate is available from the Bank of Canada or from CANSIM through the matrix number referenced.

The data for the exchange rate indexes are extracted from the daily sheets issued by the Bank of Canada. This exchange rate is the same as that used for other index tables in this publication where it was necessary to adjust United States price quotations or index numbers to a Canadian valuation.

Tables 5 and 6. Residential Building Construction Input Price Indexes

These indexes measure price changes for labour and materials used in single detached residential construction. As measures of inputs they do not adjust for productivity changes involved in design or in putting the work in place. Neither are other elements affecting output prices covered, such as site preparation, overhead and profit. Material prices used are manufacturers' new order selling prices for commodities, described above under Table 1, adjusted for changes in federal sales taxes. Labour rates are measured by the movement of basic union wage rates for relevant trades in major

Révisions. Peuvent se produire hors des délais ordinaires dans le cas de règlements salariaux rétroactifs.

Données supplémentaires. Le détail des taux relatifs aux divers métiers à partir de 1971 peut être obtenu tous les mois de CANSIM ou de la Division des prix. Les chiffres annuels pour la période allant de 1950 à 1971 portent sur 12 corps de métiers dans 14 villes.

Tableau 4. Certains indices financiers

La série des indices des prêts hypothécaires LNH s'arrête en juin 1981. On les calculait d'après une série de la SCHL sur les taux moyens demandés par les prêteurs approuvés. Après cette date, ceux-ci ne sont plus considérés comme des indicateurs appropriés et la série a été interrompue. Les taux de rendement moyens des obligations utilisés depuis juillet 1981 se fondent sur un portefeuille différent de celui utilisé auparavant. Cette nouvelle série sur les rendements remonte jusqu'en novembre 1977. La série d'indices ainsi obtenue a été raccordée à celle publiée auparavant à la date juillet 1981. Les taux ayant servi au calcul des indices proviennent de la **Revue de la Banque du Canada**. Une description plus détaillée des caractéristiques de ces données se trouve dans les notes relatives au tableau 20 de la Revue. Les données chronologiques sur les taux pour toutes les séries, sauf celle du cours du change, peuvent être obtenues auprès de la Banque du Canada ou extraites de CANSIM à l'aide du numéro de matrice indiqué en référence.

Les données des indices sur le cours du change se fondent sur les chiffres quotidiens diffusés par la Banque du Canada. Ce cours est le même que celui utilisé dans les autres tableaux d'indices de la présente publication où il a fallu ajuster les prix ou les chiffres des indices pour les États-Unis en fonction de leur valeur au Canada.

Tableaux 5 et 6. Indices des prix des entrées dans la construction résidentielle

Ces indices mesurent les variations des prix de la main-d'oeuvre et des matériaux utilisés dans la construction de maisons individuelles. Comme mesures des entrées, ils ne sont pas ajustés en fonction des changements de productivité dus à la conception ou à la mise en place des matériaux. De même, d'autres éléments du prix des sorties, comme la préparation du terrain, les frais généraux et les bénéfices, ne sont pas pris en compte. Les prix des matériaux sont les prix de vente de nouvelles commandes chez les fabricants, mentionnés dans la note du tableau 1 et ajustés en fonction des changements de la taxe de vente fédérale. Les taux salariaux sont mesurés

cities. Weights are derived from a 1969 study by CMHC of material requirements for new houses, augmented by estimates of labour requirements by trade, to establish the relative importance of each trade and the material-labour ratio for each. Regional data are weighted according to information about housing starts in the reference period. All weights are expressed at 1971 prices. This combination of manufacturers selling prices and union wage rates may not be entirely representative of inputs into the residential building sector. Typically a large percentage of non-union and own account craftsmen are employed whilst materials are often obtained from merchants.

Further data. Some regional trade indexes are available on CANSIM or from Prices Division. Annual historical indexes at the total level are published from 1926 on Table 15. These are linked, rebased figures from series previously published on different bases, with discontinuities in 1961 and 1971 affecting any aggregations. Weights used in combining materials and labour for the Canada total prior to 1971 are materials 42.68, labour 57.32. After 1971 they are materials 64.1, labour 35.9. Some commodity detail is available on a national basis, prior to 1971, but no detail is available regionally.

Tables 7 to 9. Non-residential Building Construction Input Price Indexes

These indexes measure price changes for labour and materials used in non-residential building construction. As measures of inputs they do not adjust for productivity changes involved in design or in putting the work in place. Neither are other elements affecting output prices covered, such as site preparation, overhead and profit. Material prices used are manufacturers' new order selling prices for commodities, described above under Table 1, adjusted for changes in federal sales taxes. They do not however allow for freight charges or local taxes. Labour rates used are basic union wage rates described above under Tables 2 and 3. Weights are derived from a cost analysis of a number of structures in 1971 to establish the relative importance by trade of material and labour requirements. These were aggregated into material commodity groups by type of structure, and into total labour requirements. Separate weighting patterns by region

d'après le mouvement des taux syndicaux de base des métiers concernés dans les grandes villes. Les pondérations sont tirées d'une étude effectuée en 1969 par la SCHL sur les matériaux utilisés pour les nouvelles maisons, ainsi que des estimations des besoins en main-d'oeuvre par métier; cela permet de calculer l'importance relative de chaque métier et le rapport des matériaux - main-d'oeuvre dans chacun. Les données régionales sont pondérées d'après les renseignements sur les mises en chantier de logements pendant la période de référence. Toutes les pondérations sont exprimées en prix de 1971. Cette combinaison de prix de vente des manufacturiers et de taux de salaire syndicaux n'est peut être pas entièrement représentative des entrées du secteur de la construction résidentielle. Une des caractéristiques de ce secteur réside en ce qu'un fort pourcentage d'hommes de métier non syndiqués et d'artisans y travaillent et que, souvent, les matériaux sont achetés chez des marchands.

Données supplémentaires. Certains indices régionaux sur les métiers peuvent être obtenus de CANSIM ou de la Division des prix. Le tableau 15 présente les indices historiques annuels pour tout le Canada à partir de 1926. Ils s'agit de chiffres raccordés provenant de séries publiées auparavant sur des bases différentes et ramenés à une nouvelle base; les solutions de continuité de 1961 et 1971 compliquent néanmoins les agrégations. Les pondérations servant à combiner matériaux et main-d'oeuvre pour le total du Canada sont respectivement 42.68 et 57.32 avant 1971 et 64.1 et 35.9 par la suite. Pour la période antérieure à 1971, il existe certaines données sur les matières au niveau national, mais aucune au niveau régional.

Tableaux 7 à 9. Indices des prix des entrées dans la construction non résidentielle

Ces indices mesurent les variations des prix de la main-d'oeuvre et des matériaux utilisés dans la construction non résidentielle. Comme mesures des entrées, ils ne sont pas ajustés en fonction des changements de productivité dus à la conception ou à la mise en place des matériaux. D'autres éléments du prix des sorties, tels que la préparation du terrain, les frais généraux et les bénéfices ne sont pas pris en compte. Les prix des matériaux utilisés sont les prix des nouvelles commandes de matériaux chez les fabricants, décrits dans la note du tableau 1 et ajustés en fonction des changements de la taxe de vente fédérale. Ils ne tiennent pas compte, cependant, des frais de transport ni des taxes locales. Les taux salariaux sont les taux syndicaux de base mentionnés précédemment à propos des tableaux 2 et 3. Les pondérations découlent d'une analyse des prix de revient d'un certain nombre d'ouvrages, effectuée en 1971 pour déterminer l'importance relative des matériaux et de la main-d'oeuvre dans chaque métier. On a regroupé

could not be established. Separate measures of materials price movement cannot be made; however, regional labour indexes can be identified and aggregated with materials movement at the total level (Table 7). Regional weights to combine total indexes were derived from data on construction activity in the reference period. Materials indexes are shown separately for different types of structures (Table 9).

Further data. Historical figures are available for commodity groups and labour series at varying levels of detail from 1871. At aggregative levels they are available on CANSIM. Annual indexes are published from 1926 at the total level on Table 16. These are linked, rebased figures from series previously published on different bases, with discontinuities in 1961 and 1971 particularly affecting any aggregations. Weights used in combining material and labour for the Canada total prior to 1971 are materials 43.57, labour 56.43. After 1971 they are materials 52.56, labour 47.44.

Tables 10 and 11. New Housing Price Indexes

These indexes measure changes in selling prices of **new houses** constructed by large and medium volume builders in metropolitan areas. The houses sampled are representative of the total being sold at that time but adjustments are made for changes in physical characteristics to arrive at pure price change; however no such adjustment is made for fluctuations in the level of mortgages offered to buyers by builders or for intangible variations such as location. Prices used are the selling prices agreed upon between builder and buyer at the time of signing the contract. Prices relate to mid-month. The composite index includes the house and the serviced lot on which it stands (except for a few areas, principally in Quebec, where the servicing costs are paid, not to the builder as part of the purchase price, but to the local municipality in property taxes), and Indexes are shown separately for the house and the serviced lot, this latter's is derived from builders' estimates of the market value of a serviced lot in the subdivision in which the house is sold, were such a lot to be sold separately. This estimate should be treated with caution as lots rarely are sold separately and there is evidence to suggest that these estimates are slow to be changed, particularly in a downward direction. Weights are applied to combine price movements of different models

les matériaux par genre d'ouvrage et les besoins totaux en main-d'oeuvre. Des schémas de pondération n'ont pu être établis pour les régions. Des mesures distinctes des mouvements des prix des matériaux ne peuvent être calculées; néanmoins, des indices régionaux de la main-d'oeuvre peuvent être isolés et combinés avec les indices des matériaux pour produire un chiffre global (tableau 7). Les pondérations régionales pour combiner l'indice total proviennent des données sur la construction pendant la période de référence. Les indices des matériaux sont indiqués pour divers types d'ouvrages (tableau 9).

Données supplémentaires. Des chiffres historiques existent à divers niveaux de ventilation à partir de 1871 pour des groupes de produits et la main-d'oeuvre. Les agrégats peuvent être obtenus de CANSIM. Le tableau 16 présente les indices annuels pour l'ensemble du Canada à partir de 1926. Il s'agit de chiffres raccordés, provenant de séries publiées auparavant sur des bases différentes et ramenés à une nouvelle base; les solutions de continuité de 1961 et 1971 compliquent néanmoins les agrégations. Les pondérations servant à combiner matériaux et main-d'oeuvre pour le total du Canada sont respectivement 43.57 et 56.43 avant 1971 et 52.56 et 47.44 à partir de cette date.

Tableaux 10 et 11. Indices des prix des logements neufs

Ces indices mesurent les variations des prix de vente des **maison neuves** bâties par des constructeurs de grande ou de moyenne importance dans les régions métropolitaines. Les maisons retenues dans l'échantillon sont représentatives de toutes celles vendues à ce moment-là, mais nous procédons aux rajustements que nécessite l'évolution des caractéristiques physiques pour en arriver à un changement de prix pur, toutefois, nous ne tenons pas compte des fluctuations du niveau des hypothèques offertes aux acheteurs par les constructeurs, ni des variations d'éléments intangibles comme la location. Les prix utilisés sont les prix de vente convenus entre le constructeur et l'acheteur au moment de la signature du contrat; ils sont ceux du milieu du mois. Ils englobent les coûts de la maison et du terrain viabilisé où elle est construite (sauf dans quelques régions, principalement au Québec, où le coût de la viabilité est payé non pas au contracteur dans le prix d'achat, mais à la municipalité sous forme de taxe foncière); les indices sont indiqués séparément pour les maisons et les terrains viabilisés, et se fonde sur les estimations des constructeurs relativement à la valeur marchande du terrain viabilisé dans le lotissement où la maison est vendue, si le terrain était vendu à part. Il s'agit là d'une estimation délicate puisque les lots sont rarement vendus séparément; il y a lieu de croire que ces valeurs évoluent très lentement, particulièrement en baisse. Les pondérations servent à combiner les mouvements

within a company and different companies within a city. They are revised regularly to reflect latest market shares. City indexes are combined to the Canada index according to the value of housing starts in the three-year period 1975 to 1977. Users of these tables are advised that comparisons of these indexes with other sources of housing statistics, which include either the selling prices of specific types of houses or selling prices of both new and old houses, should be made with caution.

Revisions. Indexes as published are final.

Further data. On a 1976 base, indexes are available prior to those shown as follows: Montréal, from 1971, Ottawa-Hull from 1970, Toronto, Winnipeg, Calgary, Edmonton from 1969. Table 10, showing indexes on a 1971 base, is an arithmetic conversion from the 1976 based figures. No other historical information is available.

Table 12. Output Price Indexes of Non-residential Construction

These indexes measure the change in estimated contract amounts for the construction of selected non-residential buildings. Each model is selected to be representative of a type of building construction, i.e., commercial, industrial or institutional. As measures of output the prices include for materials, labour, use of equipment, sales taxes, job overhead and profit. They reflect the conditions of the local market, and they also reflect the results of productivity change in putting the work in place.

Prices are obtained for materials, labour, rental of equipment, municipal charges and for items of work-in-place. The prices for work-in-place are obtained from sub-contractors and general contractors on the basis that they are bidding in the real market and as such include the current overhead, profit and market conditions.

Weights are derived from a pricing of all items in the building, valued at 1976 prices. The four cities surveyed do not provide an adequate national sample, so the composite index is a straight average of the four cities. Commencing in the first quarter of 1981 the three buildings are priced in each of the four quarters of each year. Previously each building was priced once a year, the office building in the first quarter of the year, the light industrial building in the third, and the school in the

des prix de différents modèles pour une entreprise et de diverses entreprises dans une ville; on les révisé périodiquement pour qu'elles reflètent la plus récente répartition du marché. Les indices des villes sont fondés en un indice canadien d'après la valeur des mises en chantier de logements pendant la période allant de 1975 à 1977. Les utilisateurs de ces tableaux doivent se montrer prudents lorsqu'ils comparent ces indices à d'autres sources de données sur le logement qui comprennent les prix de vente d'un genre de logement donné ou les prix de vente de logements neufs et de vieux logements.

Révisions. Les indices publiés sont définitifs.

Données supplémentaires. Voici les indices antérieurs à ceux fournis ici qui existent sur la base de 1976: Montréal, à partir de 1971; Ottawa-Hull, à partir de 1970; Toronto, Winnipeg, Calgary, Edmonton, à partir de 1969. Le tableau 10, qui présente des indices sur la base de 1971, est une conversion arithmétique des chiffres à base 1976. Il n'existe pas d'autres données historiques.

Tableau 12. Indices des prix des sorties de la construction non résidentielle

Ces indices mesurent les variations des devis de construction de certains immeubles non résidentiels. Chaque modèle choisi représente un type de bâtiment commercial, industriel ou institutionnel. Comme mesures des prix des sorties, ils prennent en compte les matériaux, la main-d'oeuvre, l'utilisation de matériel, les taxes de vente, les frais généraux des travaux et les bénéfices. Ils reflètent les conditions du marché local et les résultats des variations de la productivité dans la mise en place de matériaux.

Les prix retenus concernent les matériaux, la main-d'oeuvre, la location de matériel, les charges municipales et les travaux exécutés sur place. Dans le cas de ces travaux, les prix nous sont fournis par les sous-traitants et les entrepreneurs généraux, étant entendu qu'il s'agit de prix offerts sur le marché réel et englobant les frais généraux, la marge bénéficiaire et les coûts marchands.

Les pondérations sont basées sur les relevés des prix de tous les éléments des immeubles, ramenés aux prix de 1976. Comme les quatre villes concernées ne fournissent pas un échantillon national convenable, l'indice composite n'est qu'une moyenne mathématique des chiffres concernant les quatre villes. À compter du premier trimestre de 1981, les trois immeubles feront l'objet d'un relevé de prix à tous les trimestres de chaque année. Auparavant, chaque immeuble était évalué une fois l'an: l'immeuble à bureau, au premier trimestre; le bâtiment d'industrie

Fourth quarter. The high rise office building priced from 1972 to 1978 has been replaced by a medium-rise office building in 1978. Prior to that year estimates for the mechanical and electrical work for the office building were not available.

Revisions. Figures as published are final.

Further data. The elements of the school building are reagggregated together with other data to provide estimates for hospital construction. For all buildings further trade details are available on CANSIM. No other historical data is available.

Tables 13 and 14. Fabricated Structural Steel Price Indexes; Precast Concrete Price Indexes

These indexes measure price changes for structural steel and precast concrete construction work. Because of the large amount of in-plant work involved much of this is performed by companies classified to manufacturing industries (302 and 354). However the nature of their activity makes them similar to the construction industry. Prices used are new order selling prices for the completed product in place, which includes for materials, labour, shop fabrication, sales taxes, hauling to job-sites, site erection, overhead and profit. Weights applied are derived from census of manufacturing values of output in the period 1971 to 1973, converted to 1972 price levels.

Further data. None.

Tables 15 and 16. Historic Residential and Non-residential Price Deflators

For descriptions of the input indexes see notes for Tables 5 through 9. The implicit price indexes are reprinted from **National Income and Expenditure Accounts** (Catalogue 13-001). They are derived from the compilation of the National Accounts, and represent the movement of the ratio of investment in residential and non-residential construction measured in current dollars to investment measured in constant dollars. Because the measures in constant dollars are usually calculated by deflating those in current dollars by appropriate measures of price movement at as fine a level of detail as

légère, au troisième trimestre; l'école, au quatrième trimestre. La tour de bureaux, évaluée de 1972 à 1978, a été remplacée en 1978 par un immeuble à bureaux de hauteur moyenne. On ne disposait pas avant 1978 d'estimations pour les travaux de mécanique et d'électricité relativement aux immeubles à bureaux.

Révisions. Les chiffres publiés sont définitifs.

Données supplémentaires. Les éléments de l'école sont regroupés avec d'autres données pour produire des estimations sur la construction d'hôpitaux. Pour tous les immeubles, il existe certains autres détails sur les métiers. On peut les obtenir de CANSIM. Aucune autre donnée historique n'est disponible.

Tableaux 13 et 14. Indices des prix de l'acier de charpente semi-ouvré; Indices des prix du béton précontraint

Ces indices mesurent les variations de prix des travaux de construction en acier de charpente et en béton précontraint. En raison de la forte proportion de travail en usine exigé, une grande partie du travail est exécuté par des sociétés classées dans les industries manufacturières (302 et 354). Néanmoins, leur activité les rapproche de l'industrie de la construction. Les prix utilisés sont les prix de vente des nouvelles commandes à l'égard du produit fini mis en place et prennent en compte matériaux, main-d'oeuvre, fabrication en atelier, taxes de vente, transport jusqu'au chantier, installation sur place, frais généraux et bénéfices. Les pondérations utilisées sont fondées sur les chiffres de la production obtenus du recensement des manufactures pendant la période de 1971 à 1973 et ramenés aux prix de 1972.

Données supplémentaires. Aucune.

Tableaux 15 et 16. Indices de déflation historique des prix de la construction résidentielle et non-résidentielle

Pour les descriptions des indices des entrées, voir les notes relatives aux tableaux 5 à 9. Les indices de prix implicites sont extraits du n° 13-001 au catalogue, **Comptes nationaux des revenus et des dépenses**. Ils résultent du calcul des comptes nationaux et représentent le mouvement du ratio des dollars courants sur les dollars constants en ce qui concerne les investissements en construction résidentielle et non-résidentielle. Comme les chiffres en dollars constants s'obtiennent généralement en dégonflant les chiffres en dollars courants au moyen des mesures appropriées du mouvement des prix des composantes les plus fines possible et en additionnant les résultats,

possible and adding up the results, the relationship between the implicit movements and the aggregate of appropriate price movements should be close, being affected mainly by shifts in the relative importance of the detailed components. For residential construction before 1971, and for non-residential construction for the whole period from 1926 to now, the input indexes have been major determinants of the deflated values. Before 1971 the input indexes and the implicit indexes are the main available measures for price movements of building construction.

However, there are differences between the input indexes and the implicit indexes. Coverage: residential investment includes repair construction, apartments, row housing, cottages, mobile homes and commissions from the sale of real estate in addition to single family houses, the only item covered by the input indexes. Non-residential investment includes all engineering construction as well as non-residential buildings. Prices: the input indexes make no allowance for productivity change or variations in profits but adjustments are made to reflect these in the deflation process. To residential data from 1949 to 1971 and for non-residential data since 1949 a productivity adjustment of 2.9% per annum has been applied to wage rate measures. Separate measures of overhead costs and variations in profit margins are also incorporated. Since 1971 residential investment quantities have been estimated directly from building start data, and total investment values from estimates of unit costs from the same data source. Neither the input price indexes nor the New Housing Price Indexes (Tables 10 and 11) are used in these calculations at present.

These notes are directed only to the differences between the input price indexes and the implicit price indexes. For further information on the latter the reader is referred to the Gross National Product Division, Statistics Canada.

Revisions. Within each year, any previous quarter in that year may be revised. In the first quarter each year, the previous four years (exceptionally more) may be revised. There are occasional historical revisions covering longer periods.

le rapport entre les mouvements implicites et l'agrégat des mouvements de prix appropriés devrait être assez étroit, étant surtout sensible aux variations de l'importance relative des composantes. Pour la construction résidentielle avant 1971, ainsi que pour la construction non résidentielle pour toute la période s'étendant de 1926 jusqu'à maintenant, les indices des entrées ont été des déterminantes importantes des valeurs dégonflées. Avant 1971, les indices des entrées et les indices implicites sont les seules mesures existantes du mouvement des prix de la construction d'immeubles.

Toutefois il y a des différences entre les indices des entrées et les indices implicites. Champ d'observation: les investissements résidentiels englobent, en plus des réparations et de la construction des maisons unifamiliales, seuls éléments pris en compte dans les indices des entrées, les immeubles d'appartements, les maisons en rangées, les chalets et les maisons mobiles ainsi que les commissions sur la vente d'immeubles. Les investissements non résidentiels comprennent tous les investissements pour les travaux de génie et les immeubles non résidentiels. Prix: les indices des entrées n'accordent aucune place à la variation de la productivité et des bénéfices. En conséquence, le processus de déflation comporte des ajustements appropriés. Relativement aux données sur la construction résidentielle entre 1949 et 1971 et à celles sur la construction non résidentielle depuis 1949, un ajustement de 2.9% par année pour la productivité a été appliqué aux mesures des taux de salaire. Des mesures distinctes des frais généraux et des variations des marges bénéficiaires sont également incorporées. Depuis 1971 les investissements résidentiels ont été estimés directement à partir des données sur les mises en chantier d'immeubles, et la valeur des investissements totaux est basée sur les estimations des coûts unitaires tirées de la même source. Ni les indices des prix des entrées ni ceux des prix des nouveaux logements (tableaux 10 et 11) ne sont utilisés actuellement dans ces calculs.

Ces notes concernent uniquement les différences entre les indices des prix des entrées et les indices de prix implicites. Pour de plus amples renseignements, sur ces derniers, le lecteur est prié de s'adresser à la Division du produit national brut, à Statistique Canada.

Révisions. Pour chaque année, les chiffres de tout trimestre précédent peuvent être révisés. Au premier trimestre de chaque année, les données des quatre années précédentes (exceptionnellement plus) peuvent être révisées. Il y a occasionnellement des révisions historiques portant sur des périodes plus longues.

Further data. See National Income and Expenditure Accounts (Catalogue 13-001).

Table 17. Highway Construction Price Indexes

These indexes measure price changes for work in place of a fixed programme of highway construction. As output prices the indexes include for materials, labour, use of fuel and equipment, taxes, job-overhead and profit. They reflect local markets and productivity changes in putting the work in place. Prices are unit prices for specified items of work on contracts let by provincial governments for new highway construction. Weights were derived from costs incurred on different elements of work by all provinces in the period 1970 to 1972 valued in 1971 prices.

Revisions. Indexes as published are final.

Further data. Indexes for components: grading, base course, paving by province are available on CANSIM or from Prices Division for the historical period as shown. Indexes are also available since 1971 showing the price movement of contract work and of materials supplied by departments for installation by contractors separately.

Table 18. Electric Utility Construction Price Indexes

These indexes measure price change for construction of five separate models of electric utility plant. Each model was developed after extensive consultation with major Canadian electric utilities and the Canadian Electrical Association. Each model portrays an average mix of materials, labour and equipment developed from a variety of projects in a specific base period. This modelling technique provides the framework for the development of simulated plant indexes for construction work and machinery and equipment. Direct costs associated with the construction work and machinery and equipment components are represented by various combinations of price and price index data. Prices indexes used for construction work are a mixture of indexes for work in place for such items as earthwork and structural steel, available from other surveys, and indexes covering major material and labour inputs. Prices used for machinery

Données supplémentaires. Voir Comptes nationaux des revenus et des dépenses (n° 13-001 au catalogue).

Tableau 17. Indices des prix de la construction routière

Ces indices mesurent les changements des prix des matériaux mis en place pour un programme fixe de construction routière. Comme prix des sorties, les indices tiennent compte des matériaux, de la main-d'oeuvre, de combustible utilisé, des taxes sur le matériel, des frais généraux des travaux et des bénéfiques. Ils reflètent les conditions du marché local et les variations de la productivité dans la mise en place des matériaux. Les prix sont les prix unitaires d'éléments déterminés du travail effectué en vertu de contrats accordés par les administrations provinciales pour la construction de nouvelles routes. Les pondérations ont été tirées des coûts, aux prix de 1971, engagés à l'égard de différents éléments de travail par toutes les provinces pendant la période allant de 1970 à 1972.

Révisions. Les indices publiés sont définitifs.

Données supplémentaires. Indices des composantes: nivellement, couches de base, revêtements, par province peuvent également être obtenus de CANSIM ou de la Division des prix pour la période passée mentionnée. Des indices distincts font voir le mouvement des prix des travaux à forfait et celui des matériaux fournis aux entrepreneurs depuis 1971 par les ministères pour être installés.

Tableau 18. Indices des prix à la construction dans les services d'électricité

Ces indices mesurent les variations des prix relativement à la construction de cinq modèles de services d'électricité. Chaque modèle est le fruit de longues consultations avec les principaux services canadiens d'électricité et l'Association canadienne de l'électricité. Chaque modèle présente un mélange moyen de matériaux, de main-d'oeuvre et d'équipement dont les coûts ont été observés dans différents chantiers au cours d'une période de référence précise. Cette technique de modélisation fournit la base nécessaire à l'élaboration des indices des prix du travail de construction, de la machinerie et du matériel d'une usine simulée. Les coûts directs liés au travail de construction, à la machinerie et au matériel sont représentés par différentes combinaisons de données sur les prix et sur les indices des prix. Les indices des prix utilisés relativement au travail de construction sont un mélange des indices concernant des éléments du travail exécuté sur place tels que le terrassement et l'érection des charpentes d'acier qu'on

and equipment are manufacturers' new order selling prices for equipment installed where possible, including sales taxes, for domestic equipment, and foreign price indexes adjusted for changes in exchange rates and tariffs for imported equipment. Indirect costs covered include interest foregone during construction, and design and administration costs, whose movements are indexed from salary survey data. Weights were derived from gross capital additions by major utilities, classified according to their codes of accounts. The periods used were: distribution, transformation and transmission systems, 1970 to 1975; hydro electric generating stations, mid 1950's to end 1960's; fossil-fuel fired generating stations, 1960's.

Revisions. The latest year is subject to revision.

Further data. Considerable component details are available from 1971 onwards; less is available before 1971, either on CANSIM or from Prices Division.

Table 19. Chemical and Mineral Process Plant Price Indexes

These indexes measure price change for construction of a model processing plant representative of those used in industries with a heavy processing element: chemical, petroleum, pulp and paper, cement and lime, mining, smelting and refining. Prices used for machinery and equipment are manufacturers' new order selling prices for domestic equipment and foreign price indexes adjusted for changes in exchange rates and tariffs for imports. Field erection costs are indexed separately using labour wage rates and equipment price indexes. Buildings costs are indexed by input indexes, and design and administration costs by surveys of salaries. The weights used were derived from an analysis of gross capital additions undertaken by major utilities during the late 1960's, yielding an estimated average expenditure for the classes of construction specified by the companies codes of account. This average may be considerably different from the historical investment pattern which a specific user may wish to convert into the price levels of another year. If the difference is judged important the user should substitute

peut tirer d'autres enquêtes, et des indices concernant l'apport de matériaux et de main-d'oeuvre. Les prix utilisés pour les machines et le matériel sont, dans la mesure du possible, les prix de vente des fabricants pour les nouvelles commandes à l'égard du matériel installé, taxes de vente comprises, pour les marchandises canadiennes et les indices des prix à l'étranger ajustés en fonction des taux de change et des tarifs douaniers dans le cas du matériel importé. Les coûts indirects pris en compte comprennent les intérêts courus pendant la construction et les frais de conception et d'administration dont les mouvements sont mesurés à partir des résultats des enquêtes sur les salaires. Les pondérations ont été tirées des additions brutes de capital par les principaux services, classés d'après leur code de compte. Les périodes utilisées sont les suivantes: systèmes de distribution, de transformation et de transmission, 1970 à 1975; centrales hydro-électriques, milieu des années 1950 à fin des années 1960; centrales thermiques à combustibles fossiles, années 1960.

Révisions. Les chiffres de la dernière année sont sujets à révision.

Données supplémentaires. On peut obtenir de CANSIM ou de la Division des prix passablement de détails sur les composantes à partir de 1971, mais moins pour la période antérieure.

Tableau 19. Indices des prix des installations de traitement des produits chimiques et minéraux

Ces indices mesurent les variations des prix relativement à la construction d'un modèle d'usine de transformation représentatif des industries où le travail de transformation représente un élément important: produits chimiques, pétrole, pâtes et papier, ciment et chaux, mines, fonte et affinage. Les prix utilisés pour les machines et le matériel sont les prix de vente des fabricants pour les nouvelles commandes de matériel fabriqué au Canada et les indices des prix à l'étranger ajustés en fonction des taux de change et des tarifs douaniers pour les importations. Les indices des coûts d'installation sur place sont calculés séparément au moyen des taux de salaire de la main-d'oeuvre et des indices des prix du matériel. Ceux des immeubles le sont au moyen des indices des entrées, et les frais de conception et d'administration, au moyen des résultats des enquêtes sur les salaires. Les coefficients de pondération utilisés proviennent d'une analyse qui, portant sur les additions brutes de capital réalisées par les principales entreprises vers la fin des années 1960, donne une dépense estimative moyenne pour les catégories de construction que spécifient les codes de compte des compagnies. Il n'est pas impossible

weights derived from his own gross additions to capital for the weights shown in the table.

Further data. No history is available before 1971. No further component detail is available. See also Table 20.

Table 20. Chemical and Petrochemical Plant Price Indexes

These indexes measure price change for construction of a processing plant of the sort installed by chemical and petrochemical companies. It is similar to the sort of installation described under Table 19 above, except: (1) the model is a battery limits rather than grass roots plant; (2) it is restricted to the sort of plant in which gases and liquids only are processed. Prices are as described under Table 19. Weights are derived from a study carried out by an ad hoc committee of the Canadian Chemical Producers Association and represent a typical battery limits plant installed in the early 1970's. Elements are classified according to their codes of accounts, valued in 1971 prices. The pattern of weights shown in the table may be considerably different from the historical investment pattern which a specific user may wish to convert into the price levels of another year. If the difference is judged important the user should substitute weights derived from his own gross additions to capital for the weights published herein.

Further data. No history is available before 1971. No further component detail is available.

Table 21. Canadian Telecommunications Plant Price Indexes (CTPI)

These indexes measure price change through time for capital expenditures carried out by leading members of the Canadian telecommunication carriers industry. Weights are derived annually from a survey of gross additions to capital relating to the previous year's expenditures classified by the carriers' codes of accounts. Equipment prices are derived largely from carriers purchasing experience which is applied to specific models of installation. In some

que cette moyenne diffère considérablement des tendances chronologiques de l'investissement que tel ou tel utilisateur peut vouloir convertir en niveaux des prix d'une autre année. S'il juge la différence importante, l'utilisateur ferait bien de substituer les pondérations tirées de ses propres additions brutes de capital aux pondérations indiquées dans le tableau.

Données supplémentaires. Aucune donnée historique antérieure à 1971. Aucun autre détail sur les composantes n'est disponible. Voir également le tableau 20.

Tableau 20. Indices des prix des installations de traitement des produits chimiques et pétrochimiques

Ces indices mesurent les variations des prix de la construction d'une usine de transformation qui caractérise les sociétés chimiques et pétrochimiques et qui ressemble à l'installation décrite dans la note du tableau 19, sauf: (1) que le modèle concerne une installation particulière, plutôt qu'un complexe intégré; et (2) qu'il représente uniquement les usines qui ne transforment que des gaz et des liquides. La description des prix correspond à celle donnée pour le tableau 19. Les pondérations sont basées sur une étude menée par un comité spécial de l'Association canadienne des fabricants de produits chimiques et représentent une installation particulière typique mise sur pied au début des années 1970. Les éléments sont classés d'après leur code de compte et évalués aux prix de 1971. Il n'est pas impossible que le schéma de pondération indiqué dans le tableau diffère considérablement des tendances chronologiques de l'investissement que tel ou tel utilisateur peut vouloir convertir en niveaux des prix d'une autre année. S'il juge la différence importante, l'utilisateur ferait bien de substituer les pondérations tirées de ses propres additions brutes de capital aux pondérations publiées dans le présent document.

Données supplémentaires. Aucune donnée historique antérieure à 1971 n'est disponible. Aucun autre détail sur les composantes n'est disponible.

Tableau 21. Indices des prix des installations canadiennes de télécommunications (IICT)

Ces indices mesurent les variations des prix dans le temps des dépenses en immobilisations effectuées par les principales entreprises de l'industrie canadienne des télécommunications. Les poids sont établis annuellement d'après les résultats d'une enquête sur les additions brutes de capital se rapportant aux dépenses de l'année précédente ventilées selon les codes de compte des entreprises. Les prix pour le matériel ont été calculés en grande partie en relevant les achats effectués par les entreprises et en les

instances manufacturers supply model prices for this purpose. Also included are prices for design, installation and overheads which in some cases are prices for wage rates or salaries.

appliquant à certains modèles d'installations. Dans certains cas, les fabricants ont fourni les prix des modèles expressément aux fins de ces indices. Sont également inclus, les prix de la conception, de l'installation et des frais généraux qui, dans certains cas, correspondent aux taux de rémunération ou aux salaires.

Index Formula
Formule de l'indice

$$I_t = \left[\sum_{i=1}^n \sum_{j=1}^m \left(\frac{P_{ij}(t)}{P_{ij}(t-1)} \right) \left[I_{ij}(t-1) \right] \right] W_i(t-1) W_{ij}(t-1)$$

Where:
Où:

I_t is the price index for year t
 $P_{ij}(t)$ is the price in year t
 $W_{ij}(t-1)$ is the weight (quantity x price) from previous year
 i is the item price
 j is a sub-index
 $\sum_{i=1}^n$ is summation over all items
 i = 1, 2, ..., n
 $\sum_{j=1}^m$ is summation over all sub-indexes
 j = 1, 2, ..., m
 $I(t-1)$ is the price index for previous year

I_t est l'indice des prix à l'année t
 $P_{ij}(t)$ est le prix durant l'année t
 $W_{ij}(t-1)$ est le coefficient de pondération (quantité x prix) de l'année précédente
 i est un produit particulier
 j est un sous-indice
 $\sum_{i=1}^n$ est la somme de tous les produits,
 i = 1, 2, ..., n
 $\sum_{j=1}^m$ est la somme de tous les sous-indices
 j = 1, 2, ..., m
 $I(t-1)$ est l'indice des prix à l'année antérieure

Revisions. This is a preliminary index and all data is subject to revision.

Révisions. Comme il s'agit d'une indice provisoire, toutes les données sont susceptibles d'être révisées.

Further data. Some components of major groups are available from the Prices Division; no historical data is available before 1976. An expanded description of the indexes is available on request from the Prices Division.

Données supplémentaires. On peut obtenir certaines composantes des principaux groupes auprès de la Division des prix; aucune donnée ne porte sur la période précédente 1976. Une description plus détaillée de ces indices est disponible sur demande de la Division des prix.

Table 22. Machinery and Equipment Implicit Price Indexes

Tableau 22. Indices implicites des prix des machines et du matériel

For description of implicit price indexes generally, revisions, and further data see notes to Tables 15 and 16 above. The implicit price indexes for machinery and equipment are determined by a series of commodity price indexes for various equipment and machines purchased by different industries. Prices used to make these indexes are as described under Table 23 below. Industries covered are Agriculture and Fishing, Forestry, Mining, Manufacturing (certain industries), Construction, Trade, Finance Insurance and Real Estate, Institutional Services.

Pour la description générale des indices implicites des prix, les révisions et les données supplémentaires, voir les notes concernant les tableaux 15 et 16. Les indices implicites des prix des machines et du matériel sont déterminés par un ensemble d'indices des prix des machines et du matériel variés achetés par diverses industries. Les prix utilisés dans le calcul de ces indices sont décrits dans la note du tableau 23. Les secteurs d'activité visés sont les suivants: agriculture et pêche; forêts; mines; industries manufacturières (certaines); bâtiment et travaux publics; commerce; finances, assurances et affaires immobilières; services institutionnels.

Tables 23, 24, and 25. Machinery and Equipment Price Indexes (MEPI)

These base weighted indexes measure price change for machinery and equipment purchases relative to annual gross additions to capital by industry of purchase. Prices included in the index are manufacturers selling prices for machinery and equipment. Domestic prices are f.o.b. manufacturers plant, net (discounts allowed) on new orders as of the middle of the month adjusted as necessary for federal sales tax. Prices for imported equipment are represented by United States Bureau of Labour Statistics producers selling price indexes. The U.S. domestic price indexes are adjusted for changes in exchange rates and custom tariffs as well as Canadian federal sales tax. The commodity classification can be divided into two broad categories: those general-type goods, such as office furnishings and transport vehicles, which have some representation in virtually all industries (see Table 24), and those goods which are closely identified with one or two particular industries and are usually assigned to the group "Specialized Machinery". Indexes for this group are presented in Table 25.

The industry and commodity designations used for the MEPI are based on those established by the Input-Output (I-O) division of Statistics Canada. The weighting data for the 43 industries and 79 commodities, identified from I-O data, were derived mostly from the series of purchase values by industry reported to the annual survey "Private and Public Investment in Canada" conducted by the Construction Division of Statistics Canada. The value of new machinery and equipment expenditures by industry collected in this survey are defined to include annual expenditures for gross additions to capital which includes all capitalized costs associated with the procurement, construction, and installation of new durable machinery and equipment whether installed by owner, by the manufacturer or by contractors. Architectural, legal and engineering fees are also included in such values.

The relative proportions of domestic and imported machinery and equipment purchases by industry were estimated from input-output data at the commodity level. After eliminating the re-exported equipment from the current dollar imported values by commodity, the ratio of total domestic purchases to total purchases of imported machinery and equipment for each of the 79 commodity classes was calculated. By applying these ratios to the total purchase values for the corresponding commodity in each industry and by

Tableaux 23, 24, and 25. Indices des prix des machines et du matériel (IPMM)

Ces indices, pondérés sur l'année de base, mesurent la variation des prix à l'achat de machines et de matériel par rapport aux additions annuelles brutes de capital, selon l'industrie d'achat. Ils tiennent compte des prix de vente des fabricants pour les machines et le matériel. Les prix du matériel canadien sont les prix (y compris les prix spéciaux), f.o.b. départ-usine, pour les nouvelles commandes au milieu du mois, ajustés en fonction de la taxe de vente fédérale. Les prix du matériel importé sont représentés par les indices des prix de vente des producteurs du Bureau of Labour Statistics des États-Unis. Les indices des prix intérieurs américains sont corrigés de la variation des taux de change et des tarifs douaniers, de même que de la taxe de vente fédérale canadienne. La classification des produits comprend deux catégories générales: les produits généraux, tels que les articles d'ameublement et les véhicules de transport, que l'on retrouve pratiquement dans toutes les industries (voir tableau 24), et les produits étroitement liés aux activités d'une ou de deux industries et qui sont classés habituellement au groupe des "machines spécialisées". Les indices pour ce dernier groupe sont présentés au tableau 25.

Les désignations des industries et des produits utilisées pour l'IPMM sont dérivées de celles établies par la Division des entrées-sorties de Statistique Canada. Les pondérations pour les 43 industries et les 79 produits, déterminées à partir des données d'entrées-sorties, ont été tirées essentiellement de la série des valeurs à l'achat ventilées par industrie de l'enquête annuelle sur les "Investissements privés et publics au Canada" réalisée par la Division de la construction de Statistique Canada. La valeur des dépenses pour des machines et du matériel neufs ventilée par industrie, recueillie dans cette enquête, comprend les dépenses annuelles pour les additions brutes au capital, elles-mêmes comprenant tous les coûts capitalisés découlant de l'acquisition, de la construction et de l'installation de machines et de matériel neufs durables installés par le propriétaire, le fabricant ou les entrepreneurs. Les honoraires des architectes, des avocats et des ingénieurs sont également pris en compte.

Le rapport entre les produits canadiens et les importations dans les achats de machines et de matériel, par industrie, a été estimé d'après les données d'entrées-sorties au niveau du produit. Après avoir défalqué le matériel réexporté de la valeur en dollars courants des importations par produit, on a calculé le rapport entre la valeur totale des achats de produits canadiens et la valeur totale des achats de machines et de matériel importés pour chacune des 79 classes de produits. En appliquant ces rapports à la valeur totale des achats de produits correspondants dans chacune

summing the results a domestic-import split by industry was deduced. Due to the lack of expenditure data at the sub-commodity level of detail equal weights were assigned at this level. In a few instances previous enquiries into the commodity purchases of specific industries existed (i.e. construction, forestry, electric utilities, telecommunications and the chemical and mineral process industries) enabling proportional weighting at the sub-commodity level.

Throughout the aggregation process the independence of the domestic and import price series has been maintained and the combination of the two components has been effected at the lowest levels. The quality of the component data both with respect to prices and weights affects the reliability of the MEPI series. Since the samples are not randomly chosen it is not possible to estimate errors resulting from the same observations in strict statistical terms. It was feasible however, to rate the index series by industry according to the strength of the underlying data base. In doing so, two factors are taken into account: (i) the presence or absence of adequate weights to combine establishment level commodity price indexes into a given industry composite index, and (ii) the extent to which these price indexes are represented by explicit price collections. As a result of these considerations, the MEPI series by industry are marked with one of the four indicators A, B, C, and D indicating a decreasing order of rated strength of the underlying data. These ratings will be reviewed annually.

Revisions The most recent five quarters are subject to revision.

Further Data A full description of these series is contained in **Machinery and Equipment Price Indexes by Industry of Purchase, 1971-1979**, Statistics Canada (Catalogue 62-552). Price indexes by origin (Domestic, Imported) are available on CANSIM or from Prices Division.

des industries et en additionnant les résultats, on a pu déduire la répartition des produits canadiens et des importations, par industrie. Comme il manque des données sur les dépenses au niveau du sous-produit, on a attribué des coefficients de pondération égaux à ce niveau. Dans certains cas, on a pu déterminer la pondération proportionnelle au niveau de sous-produit grâce à des renseignements recueillis antérieurement sur les achats de produits de certaines industries (c.-à-d. la construction, l'industrie forestière, les services d'électricité, les télécommunications et le traitement des produits chimiques et minéraux). Tout au long du processus d'agrégation, les séries des prix canadiens et les séries des prix à l'importation sont restées indépendantes, et on a combiné les deux composantes aux niveaux les plus bas. La qualité des données des composantes, qu'elle soit fonction des prix ou des pondérations, influe sur la fiabilité des séries des IPMM. Étant donné que la la sélection des échantillons n'est pas aléatoire, il est impossible d'estimer les erreurs d'observation au sens statistique strict. On peut toutefois coter les séries d'indices par industrie en fonction de la fiabilité de la base de données sous-jacentes. Pour ce faire, deux facteurs sont pris en compte: (i) la présence ou l'absence de pondérations adéquates pour combiner des indices des prix des produits au niveau des établissements en un indice composite des prix dans une industrie donnée, et (ii) l'importance de la collecte explicite des prix dans le calcul de ces indices. Compte tenu de ces facteurs, les séries des IPMM, par industrie, reçoivent l'une des quatre cotes A, B, C et D reflétant un ordre décroissant de fiabilité dans les données sous-jacentes. Les cotes seront révisées une fois par l'an.

Révisions Les chiffres des cinq derniers trimestres sont sujets à révision.

Données supplémentaires Pour une description complète de ces séries, voir la publication de Statistique Canada intitulée **Indices des prix des machines et du matériel selon l'industrie d'achat, 1971-1979** (n^o 62-552 au catalogue). Les indices des prix selon l'origine du produit (canadien ou importé) sont disponibles sur CANSIM ou de la Division des prix.

GUIDE TO TECHNICAL REFERENCES

DOCUMENTS DE RÉFÉRENCE

| Table Tableau | Title Titre | Catalogue | Issue |
|---|---|-------------------|---|
| Elements of input cost - Coûts des éléments pour les entrées | | | |
| 1 | Industry selling price indexes: Manufacturing, 1971 = 100, 1956-1976 - Indices des prix de vente de l'industrie: Manufacturière, 1971 = 100, 1956-1976 | 62-543 | |
| 2 and - et 3 | Construction union wage rate indexes, 1971 = 100 - Indices des salaires syndicaux de la construction, 1971 = 100 | 62-007 | Sept. 1976 |
| 5 and - et 6 | Residential building construction price input indexes, 1971 = 100 - Indices des prix des entrées dans la construction résidentielle, 1971 = 100 | 62-006 | Vol. 1, No. 7 |
| 7 to - à 9 | Non-residential building construction input price indexes, 1971 = 100(1) - Indices des prix des entrées dans la construction non-résidentielle, 1971 = 100(1) | 62-007 | Issued with - Publié avec |
| Output of industries engaged in construction - Sorties pour les industries engagées dans la construction | | | |
| Residential construction - Construction résidentielle: | | | |
| 10 and - et 11 | New housing price indexes, 1971 = 100 - Indices des prix des logements neufs, 1971 = 100 Additional unpublished technical material available from Prices Division on request - Documents techniques non publiés qu'on peut obtenir sur demande de la Division des prix | 62-007 | Dec. - 1974 - Déc. |
| 12 | Output price indexes of non-residential construction (selected buildings), 1976 = 100(1) - Indices de prix des sorties de la construction non résidentielle (certains immeubles), milieu de 1976 = 100(1) | 62-007 | Issued with - Publié avec Aug. - 1978 - Août |
| 13 | Fabricated structural steel price indexes, 1972 = 100 - Indices des prix de l'acier de charpente, semi-ouvré, 1972 = 100 | 62-007 | Apr. - 1976 - Avr. |
| 14 | Precast concrete price indexes, 1972 = 100 - Indices des prix du béton précontraint, 1972 = 100 | 62-007 | Jan. - 1977 - Janv. |
