INTRODUCTION

Presented here are revised basic union wage rates and indexes for major construction trades. The revision encompasses a shift in the time reference base, an expansion of the price sample and a new weighting pattern derived from 1971 Census data on occupations. The revised basic union wage rates and indexes excluding and including selected fixed cost supplements are provided monthly from January 1971 forward and replace the previously published rates and indexes. Published indexes for the period 1952 to 1971 for the original 12 major construction trades and 14 cities have been arithmetically converted to a 1971 time base. The historical information will be available annually, as already published, and on a quarterly basis from 1972 to 1975. In addition, the revision has resulted in a major expansion of the original sample through the addition of four new construction trades and eight new cities. The four new construction trades are plasterer, roofer, truck driver and asbestos mechanic and were selected on the basis of their relative importance in construction activity. The eight new metropolitan areas of Chicoutimi-Jonquière, Sudbury, St. Catharines-Niagara, Kitchener, London, Thunder Bay, Saskatoon and Victoria were selected on the basis of population. The expansion therefore affords users wage rate data and indexes for 16 major construction trades in the 22 Canadian metropolitan areas as defined by the 1971 Census. Unlike the indexes previously published, these expanded wage rates and indexes, excluding and including selected fixed cost pay supplements are provided monthly from January 1971 forward. Composite city indexes as well as composite trade indexes have been calculated to facilitate the user's ability to analyse changes in construction wage rates.(1)

Price Sample

The sample for the revised index has been expanded, as described above. The prices selected are drawn from settlements between employees and union locals engaged in non-residential building construction. For those trades and cities that were in the sample prior to this revision there have been no changes to the wage indexes, except that they are now expressed as monthly rather than as quarterly averages. Wage rates commencing in mid-month are averaged with the previous rate, over the entire month. Cost of Living Adjustments (COLA) are stated explicitly as cents per hour and are applied directly to the basic hourly wage rate. The basic union wage rate data that are shown here still reflect straight-time hourly compensation for unionized tradesmen. The data have been restricted wherever possible to the journeyman classification of construction worker. Users are reminded that the sample is designed to show changes in wage rates over time, rather than level comparisons of wage rate levels between cities. This is so because some of the duties of the trades are not identical among cities. In addition, the level of journeyman selected for inclusion in the indexes is not identical across all cities, mainly because subdivisions of levels within a given trade are not identical among cities. While these characteristics do not interfere with an analysis of index movement, they do impose some limitation on the use of the rates published as indicators of comparative unit cost of doing work in different cities.

The following example provides an illustration of differences in the characteristics of the trades in different cities. The 1975 annual basic wage rate for crane operators in Montreal is \$7.43. The Winnipeg rate for crane operators is \$7.20 for the same period. However, the activities of the trades are not identical. The Winnipeg crane operator is allowed to operate not only cranes but shovels, backhoes and frontend loaders. In Montreal these activities are performed by other

Ce bulletin donne les taux syndicaux de salaire de base et les indices révisés portant sur les principaux métiers de la construction. La révision s'est effectuée à trois niveaux: changement de la période de référence, extension de l'échantillon des prix et nouveau schéma de pondération tiré des données du recensement de 1971 sur les professions. Ces nouveaux taux et indices mensuels comprenant ou non certains avantages salariaux à coûts fixes paraissent à partir de janvier 1971 et remplacent les taux et indices publiés antérieurement. On a converti les indices publiés de 1952 à 1971 relativement aux 14 villes et 12 métiers initiaux en fonction de la période de référence fixée à 1971. Les renseignements chronologiques seront encore disponibles sur une base annuelle, tels qu'ils sont déjà publiés, et sur une base trimestrielle de 1972 à 1975. Par ailleurs, la révision s'est soldée par une extension notable de l'échantillon initial qui s'est traduite par l'addition de quatre métiers et de huit villes. Plâtriers, couvreurs, conducteurs de camion et ouvriers en calorifugeage ont été choisis en raison de leur importance dans l'activité de construction. Les régions métropolitaines de Chicoutimi-Jonquière, Sudbury, St. Catharines-Niagara, Kitchener, London, Thunder Bay, Saskatoon et Victoria ont été retenues en fonction de leur population. Cette extension fournit donc aux utilisateurs les taux de salaire de base et les indices de 16 importants métiers de la construction observés dans les 22 régions métropolitaines définies lors du recensement du Canada de 1971. Contrairement aux séries publiées auparavant, les taux de salaire et les indices complets, comprenant ou non certains avantages salariaux à coûts fixes, sont présentés sur une base mensuelle à compter de janvier 1971. Des indices composites portant sur chaque ville et chaque métier ont été calculés afin de faciliter à l'utilisateur l'analyse des variations de taux de salaire dans la construction(1).

Échantillon des prix

Comme nous l'avons mentionné ci-dessus, l'échantillon des prix de l'indice révisé est plus vaste. Les prix relevés proviennent d'ententes conclues entre les employeurs et les sections syndicales dans le domaine de la construction non résidentielle. Les chiffres portant sur les villes et les métiers échantillonnés avant la présente révision n'ont pas été modifiés, mais ils sont maintenant exprimés en moyennes mensuelles plutôt que trimestrielles. Dans le cas des taux de salaire commençant au milieu d'un mois, le chiffre indique une moyenne pour le mois calculée à l'aide du taux observé le mois précédent. Les indemnités de vie chère (I.D.V.C.) sont clairement décrites comme des éléments de rémunération horaire et appliquées directement aux taux de salaire de base. Les données sur les taux syndicaux de salaire de base présentées ici reflètent encore la rémunération horaire au taux ordinaire des hommes de métier syndiqués. Dans la mesure du possible, les données ont été restreintes à la classification des ouvriers qualifiés de la construction. Les utilisateurs noteront que l'échantillon est destiné à mettre en évidence les changements de taux de salaire dans le temps plutôt qu'à comparer les niveaux des salaires entre les villes parce que les tâches peuvent varier d'une ville à l'autre. De plus, le niveau des ouvriers qualifiés choisis pour les fins des indices ne coïncide pas dans toutes les villes, principalement en raison de l'écart qui existe entre les subdivisions de niveau dans un métier donné d'une ville à l'autre. Ces caractéristiques n'entraînent pas l'analyse des mouvements de l'indice, mais elles imposent certaines contraintes à l'utilisation des taux publiés comme indicateurs des coûts unitaires comparatifs du travail dans différentes villes.

L'exemple suivant illustre les différences entre les caractéristiques des métiers dans différentes villes. En 1975, le taux de salaire de base d'un grutier était de \$7.43 à Montréal, au regard de \$7.20 à Winnipeg pendant la même période. Toutefois, ces grutiers n'accomplissent pas les mêmes tâches. En effet, le grutier de Winnipeg est autorisé à manœuvrer non seulement des grues, mais aussi des pelle mécaniques, des rétrocaveuses et des chargeuses à benne frontale. À Montréal, en revanche, ces tâches sont confiées à d'autres hommes de métier,

See footnote(s) on page 6.

Voir note(s) à la page 6.

tradesmen, some of whom receive higher rates of pay per hour. The crane operators surveyed in Winnipeg are classified as operators of mobile and crawler cranes over 12 tons and up to and including 35 tons. In Montreal the crane operator is defined as an operator of truck mounted mobile cranes with a rated capacity of less than 40 tons.

In another example where the classification of the same trade varies by city is the case when, in city A a trade might have four subdivisions while in city B it only has two. Usually, the classifications are such that the four subdivisions of city A cannot be collapsed to match the two subdivisions of city B. However, the wage changes in the four subdivisions in city A, or in the two subdivisions in city B, are usually the same, and there is, therefore, no need to trace movement for all the subdivisions. In most cases, the only trade subdivision selected to represent a given trade is the one with the most readily available history. The principal source of the wage rate data collected is the Collective Agreement Survey Services provided by the Canadian Construction Association. Supplemental detail on current wage rates is collected by the Capital Expenditure Prices Section. Additional detail on the earlier rates was collected from the Department of Labour and from local unions.

Characteristics of Wage Rates

The definition of "selected pay supplements" remains identical to that provided earlier, for the 1961-100 wage rate series, in Vol. 1, No. 5 of Service Bulletin, Catalogue 62-006. The cost of employing a person to work one hour can be broken down into the following components. The fixed-cost components, which are explicitly stated in contracts as cents per hour items or as a percentage of the basic wage rate, and the variable-cost components. The unit cost of the latter can only be determined after work is done. The fixed-cost components can be further divided into a main portion, which relates to amounts paid directly to the employee, and a small residual portion which is not paid directly to the employee. The elements of each are currently as follows:

Fixed Cost Component

A. Paid to the employee:

basic wage rate,
vacation pay,
statutory holiday pay,
pension contribution, employer's contribution to
private plans,
health and welfare, employer's contribution.

B. Not paid to the employee:

industry promotion fund,
training fund.

The remaining elements of cost associated with employing a person for one hour are referred to here as variable costs because the size of the charge is a function of such things as annual earnings or amount of overtime or type of project. Such components can only be evaluated after the fact from extensive surveys of employers of construction labour. As the scope of this survey is restricted to contract documents only, an assessment of these variable costs cannot be undertaken. Hence the rate and index data presented herein are restricted to the fixed cost components of pay.

Nonetheless, it is useful to outline here the characteristics of the variable cost items excluded from the survey. They consist of contractual items and legislated items and they currently comprise the following:

dont certains sont rémunérés à un taux horaire plus élevé. Le grutier de Winnipeg est classé à titre de manœuvre préposé à la conduite de grues mobiles et sur chenilles de 12 à 35 tonnes inclusivement, tandis qu'à Montréal, son homologue conduit des grues mobiles sur camion d'une capacité nominale inférieure à 40 tonnes.

Voici un autre exemple où la classification des activités d'un même corps de métier varie d'une ville à l'autre: dans la ville A, il comporte quatre subdivisions tandis qu'il en compte seulement deux dans la ville B. Le plus souvent, les quatre subdivisions de la ville A ne peuvent être regroupées de façon à correspondre aux deux subdivisions de la ville B. Cependant, les changements des salaires des quatre subdivisions de métiers de la ville A ou des deux subdivisions de métiers de la ville B étant habituellement les mêmes, il n'est pas nécessaire de faire apparaître les variations dans toutes les subdivisions. Dans la plupart des cas, la seule subdivision de métier choisie pour représenter chaque métier est celle dont la chronologie était la plus facile à obtenir. Les données sur les taux de salaire proviennent principalement de la publication Collective Agreement Survey Services fournie par l'Association canadienne de la construction. La Section des dépenses d'investissements recueille des détails supplémentaires sur les taux de salaire actuels. Le ministère du Travail et les syndicats locaux ont recueilli de plus amples renseignements sur les taux antérieurs.

Caractéristiques des taux de salaire

La définition des avantages salariaux choisis est identique à la description fournie antérieurement pour la série de salaire de 1961-100 dans le vol. 1, n° 5, du bulletin de service, n° 62-006 au catalogue. Le coût d'emploi d'une personne pendant une heure peut être ventilé suivant deux composantes: les coûts fixes, c.-à-d., ceux qui sont explicitement mentionnés dans les contrats comme des éléments de rémunération horaire ou comme un pourcentage du taux de salaire de base et les coûts variables, le coût unitaire dans ce dernier cas ne pouvant être obtenu qu'une fois le travail achevé. Les éléments à coûts fixes peuvent être subdivisés à leur tour en une partie principale, qui se rapportent aux montants versés directement au salarié et en une petite partie résiduelle qui n'est pas versée directement à ce dernier. À l'heure actuelle, ces coûts se répartissent comme suit:

Coûts fixes

A. Montants versés au salarié:

taux de salaire de base,
vacances payées,
jours fériés payés,
contributions au régime de pensions, contributions
de l'employeur à des régimes privés,
santé et bien-être; contributions de l'employeur.

B. Montants non versés au salarié:

caisse de promotion industrielle,
caisse de formation.

Les autres éléments des coûts de l'emploi d'une personne pendant une heure sont désignés ici "coûts variables" du fait que l'importance des charges est fonction d'éléments comme les gains annuels ou l'ensemble des heures supplémentaires, ou le genre de travail. De tels éléments ne peuvent être évalués qu'après coup, à partir d'enquêtes générales auprès des employeurs de travailleurs de la construction. La portée de cette étude ayant été limitée aux textes des ententes collectives seulement, nous n'avons pu entreprendre une évaluation de ces coûts variables. Les données sur les taux et les indices contenues dans ce bulletin sont donc limitées aux éléments des coûts fixes de rémunération.

Il est néanmoins utile de présenter ici les caractéristiques des éléments à coûts variables exclus de cette étude. Ils se regroupent en charges contractuelles et légales et ils comprennent à l'heure actuelle:

Variable-cost Components

| <u>Contractual Items</u> | The unit cost of the items listed is mainly a function of: |
|---------------------------|--|
| overtime rates of pay | length of workday and workweek, |
| room and board allowances | location of the job. |
| travel allowances | location of the job, |
| premium pay | job conditions, e.g., height, |
| bonuses | profit position of the employer. |

Legislated Items

| | |
|---------------------------------|--|
| Canada and Quebec Pension plans | earnings, |
| workmen's compensation | safety record, job conditions, earnings, |
| unemployment insurance | earnings. |

The hourly cost of all the fixed and variable cost components is often referred to as the cost per unit of labour input although it should be noted that this is sometimes defined to include the additional elements of employer expense relating to the provision of job supervision, pay-roll preparation, hiring, health and cafeteria services, etc.

Index Weights

The weighting diagram used in the revised index calculation is based on estimates of the gross earnings of the 16 major construction trades specified for each of the 22 largest metropolitan areas included in the sample. Gross earnings by metropolitan area are estimated for the purpose of this weighting scheme, on the basis of the 1971 Census(2) which provides data on the number and gross earnings of persons employed in the various construction trades used for the wage indexes described here. The weights used to aggregate the trades in the basic union wage rate indexes are not the same as those used to aggregate the trades in other labour input indexes.(3) A direct comparison of the weighting diagram used to derive the 1961=100 indexes with the one used to derive the 1971=100 indexes is not possible.(4)

Access to Statistics Canada Figures

The rates and indexes excluding and including selected fixed cost pay supplements will be published on a regular basis in Construction Price Statistics, Catalogue 62-007 and 62-008. Information including supplements will be available on CANSIM(5) in matrices 956,957 (monthly) and 960,961 (annual) and including supplements in matrices 958,959 (monthly) and 962,963 (annual). Users will be able to extract from the CANSIM data bank hourly wage rates with pay supplements for the entire length of each negotiated agreement. However, the corresponding index will only be available up to and including the latest reference period. For example, the actual dollar rate for an electrician in Edmonton may be available, on an incremental date basis, until March 1977 while the index would only be released as far as the current month. Data on the basic rates will usually be on CANSIM the month after a new contract is signed; however, collecting the details on the supplements usually takes longer.

See footnote(s) on page 6. — Voir note(s) à la page 6.

Coûts variablesCharges contractuelles

| | |
|---|--|
| taux de rémunération des heures-supplémentaires | Le coût unitaire des énumérées est en grande partie fonction: |
| indemnités de logement et de nourriture | de la durée de la journée de travail et de la semaine de travail, |
| indemnités de voyage primes | du lieu de travail, |
| bonis | du lieu de travail, des conditions de travail, par ex., la hauteur, de la situation bénéficiaire de l'employeur. |

Charges légales

| | |
|--|--|
| Régime de pensions du Canada et Régime de rentes du Québec | des gains, |
| Indemnisation des accidents du travail | des mesures de sécurité, des conditions de travail et des gains, |
| assurance-chômage | des gains. |

Le coût unitaire horaire de tous les éléments à coûts fixes et variables est souvent désigné comme le coût unitaire du travail; on doit cependant faire remarquer que la définition du terme comprend quelquefois des éléments supplémentaires de dépenses pour l'employeur comme la supervision du travail, la préparation des paies, le recrutement, les services sanitaires, la cafétéria, etc.

Coefficients de pondération des indices

Le diagramme de pondération servant au calcul de l'indice revisé est fondé sur les estimations des gains bruts des 16 plus importants métiers de la construction précisés pour chacune des 22 grandes régions métropolitaines échantillonées. Aux fins du présent schéma de pondération, les gains bruts sont établis d'après le recensement de 1971(2) qui fournit des données sur le nombre de personnes occupées et sur leur revenu brut par métier de la construction pour les indices de salaire dont il est question ici. Les coefficients utilisés pour regrouper les métiers sous les taux syndicaux de salaire de base diffèrent de ceux qui visent à les regrouper dans d'autres indices d'entrée de main d'œuvre(3). Il n'est pas possible d'établir une comparaison directe entre les schémas de pondération utilisés pour obtenir les indices basés sur 1961 et les indices basés sur 1971(4).

Accès aux données publiées par Statistique Canada

Les taux et indices comprenant ou non certains coûts fixes versés sous forme d'avantages salariaux paraîtront dans les bulletins Statistique des prix de la construction (nos 62-007 et 62-008 au catalogue). Les renseignements qui ne font pas état des avantages salariaux seront présentés dans les matrices de CANSIM(5) 956,957 (mensuelles) et 960,961 (annuelles), tandis que les données sur les avantages salariaux figureront dans les matrices 958,959 (mensuelles) et 962,963 (annuelles). Les utilisateurs pourront extraire de la banque de données CANSIM les taux de rémunération horaires ainsi que les avantages salariaux pour la durée entière de chaque convention négociée. Cependant, les indices correspondants paraîtront seulement jusqu'à la dernière période de référence inclusivement. Par exemple, le taux réel en dollars pour un électricien d'Edmonton pourra être obtenu périodiquement jusqu'à mars 1977, tandis que l'indice ne sera publié que pour le mois en cours. Les données sur les taux de base seront habituellement stockées dans CANSIM le mois suivant la signature du nouveau contrat, mais la collecte des détails sur les avantages salariaux demandera généralement plus de temps.

When contracts expire, the last effective wage rate is carried in the index until such time as a new contract has been negotiated. If there is a retroactive adjustment the wage rate index will then be revised to reflect the new rates of pay. Retroactivity in construction wage rate agreements has been rare and major revisions should not be necessary.

Users wishing to find out more about the revised and expanded wage rate data or those requiring historical information are requested to contact the Capital Expenditure Section of Prices Division at (613) 994-9387 or (613) 994-9484.

- (1) The wage rate indexes have been revised and expanded by Mr. L.J. Seary with the aid of Mr. L.R. Swain, Capital Expenditure Prices Section.
- (2) Census Catalogue 94-719, Vol. III, Part 2 (Information on numbers of employees) and a special Census tabulation (Average Annual Earning by Metropolitan Areas).
- (3) The weights used in the index described herein reflect the geographic distribution of all construction workers at the time of the 1971 Census, and the distribution of these workers among different trades at that time. It reflects the total pattern of construction work then being carried out by union and non-union labour together. The labour components of the residential and non-residential input indexes, on the other hand, are based on the various trade requirements for specific structures or groups of structures. Furthermore the regional weights of these input indexes reflect construction of particular classes of structures across the whole country, not just the metropolitan area. Even if all new construction could be covered by labour input indexes it would not match exactly the series given here because construction workers engaged in maintenance, repair work and own-account construction are also included.
- (4) The aggregation of the 1961 based basic wage rate indexes has been used as the labour component of the Non-residential Input Price Index. So that the weighting pattern could reflect more closely the labour requirements for non-residential building construction, adjustments were made to eliminate earnings clearly unrelated to building construction. These occurred mainly in areas where there were ports. Consequently it is not possible to make a direct comparison of the weighting diagrams used in the 1961+100 indexes to examine the shifts in the composition of the labour force. As most rates have moved similarly over the years, wide variations in the weighting patterns used have little effect on the aggregative index, but as all the individual rates are available, users who have a weighting pattern peculiar to their requirements may prefer to use it to make their own aggregations.
- (5) CANSIM is the Canadian Socio-economic Information Management System. The CANSIM system currently comprises more than 150,000 time series and the supporting software with which the computerized data can be retrieved and manipulated in a variety of ways. For an up-to-date list of available information see the CANSIM Summary Reference Index which summarizes the databank contents by subject and source. Users can subscribe to the data base by contacting CANSIM, Current Economic Analysis Division, Statistics Canada, K1A 0T6.

À l'expiration des contrats, le dernier taux de salaire en cours est reporté dans l'indice jusqu'à la signature d'un nouveau contrat. S'il y a rappel de salaires, l'indice des taux de salaire sera alors redressé en conséquence. Les conventions collectives dans la construction font rarement l'objet de rappels de salaires; aucune révision importante ne devrait donc s'imposer.

Les utilisateurs qui désirent obtenir de plus amples renseignements sur les nouvelles données révisées et étendues sur les taux de salaire ou ceux qui ont besoin de données historiques, par ville, pour chaque métier voudront bien s'adresser à la Section des Prix des immobilisations de la Division des prix aux numéros (613) 994-9387 ou (613) 994-9484.

- (1) Les indices des taux de salaire ont été révisés et améliorés par M. L.J. Seary, en collaboration avec M. L.R. Swain, de la Section des Prix des immobilisations.
- (2) No 94-719 au catalogue, vol. III, partie 2 (renseignements sur le nombre de salariés) et totalisation particulière du recensement (gains annuels moyens selon les régions métropolitaines).
- (3) Les poids reflètent la situation géographique de tous les travailleurs de la construction ainsi que leur répartition dans les différentes métiers lors du recensement de 1971. Ils illustrent en outre le travail total exécuté à ce moment par la main-d'œuvre syndiquée et non syndiquée. Par ailleurs, les éléments de main-d'œuvre des indices d'entrée dans la construction résidentielle et non résidentielle sont fondés sur les besoins des divers métiers en matière de structures ou groupes de structures déterminés. De plus, les poids régionaux de ces indices portent non seulement sur la construction dans les régions métropolitaines, mais également sur des catégories de structures particulières dans tout le pays. Même si toute la construction neuve faisait l'objet d'indices d'entrée de la main-d'œuvre, elle ne recouperait pas exactement ces séries, car elles englobent également les travailleurs de la construction préposés à l'entretien et à la réparation ou pour compte propre.
- (4) L'agrégation des indices à période de base 1961 a servi comme élément de main-d'œuvre pour l'indice des prix des entrées dans la construction non résidentielle. Pour que le schéma de pondération puisse traduire plus fidèlement les besoins en main-d'œuvre dans la construction d'immeubles non résidentiels, on a éliminé les gains qui, de toute évidence, n'étaient pas liés à la construction d'immeubles, à savoir principalement les travaux exécutés dans les ports. Il n'est donc pas possible de comparer directement les diagrammes de pondération publiés utilisés pour les indices basés sur 1961 afin d'étudier les variations de composition de la population active. Comme la plupart des taux ont varié de façon parallèle au cours des années, les écarts sensibles dans les schémas de pondération utilisés influent peu sur l'indice d'ensemble. Toutefois, étant donné que tous les taux individuels sont disponibles, les utilisateurs qui disposent d'un schéma de pondération particulier préféreront peut-être y recourir pour faire leurs propres agrégations.
- (5) Le sigle CANSIM désigne le Système canadien d'information socio-économique qui renferme actuellement plus de 150,000 séries chronologiques ainsi qu'un assortiment de programmes complémentaires permettant d'extraire et de manipuler de diverses façons les données informatisées. Pour obtenir la liste à jour des renseignements disponibles, consulter l'index sommaire de référence CANSIM qui résume le contenu de la banque de données selon le sujet et la source. Les utilisateurs peuvent s'abonner à la base de données en s'adressant à CANSIM, Division des analyses de conjoncture, Statistique Canada (K1A 0T6).

(1) Indexes of basic rates. — Indices du taux de base.

(2) Indexes of rates including supplements. — Indices du taux englobant les avantages sociaux.

PREFACE

Construction price statistics comprise price indexes of inputs into construction, contractors selling prices and special purpose aggregations of price indexes for construction and machinery and equipment relating to specified categories of capital expenditures. These statistics are presented in two publications: Construction Price Statistics, Monthly Bulletin Catalogue (62-007), and Construction Price Statistics, Quarterly Report, Catalogue (62-008).

The Monthly Bulletin contains detailed residential and non-residential construction input price indexes, and a summary of the major indexes presented in the Quarterly Report. Construction price statistics will normally be released in the Monthly Bulletin about the end of each month. The Quarterly Report will present full details of all available price indexes and will be released early in the third month of each quarter.

Articles relating to new or revised construction price statistics will be presented in removable centre sections. For the convenience of subscribers, articles will be released in both the Monthly Bulletin and the Quarterly Report.

PREFACE

La statistique des prix dans la construction comprend des indices des prix des entrées dans la construction, des indices des prix de vente des entrepreneurs et des groupes spéciaux d'indices de prix de la construction et des machines et du matériel pour des catégories déterminées d'immobilisations. Ces statistiques paraissent dans deux publications: Statistiques des prix de la construction, bulletin mensuel (n° 62-007 au catalogue) et Statistiques des prix de la construction, rapport trimestriel (n° 62-008 au catalogue).

Le bulletin mensuel renferme des indices détaillés des prix des entrées dans la construction résidentielle et non résidentielle, et un résumé des principaux indices présentés dans le rapport trimestriel. Les statistiques des prix dans la construction paraîtront habituellement dans le bulletin mensuel vers la fin de chaque mois. Le rapport trimestriel fournira des renseignements détaillés sur tous les indices de prix disponibles et sortira au début du troisième mois de chaque trimestre.

Les articles traitant de statistiques nouvelles ou révisées des prix de la construction seront présentés dans des sections centrales mobiles. Au bénéfice des abonnés, ces articles paraîtront dans le bulletin mensuel et le rapport trimestriel.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- R revised figures.
- X confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- R nombres rectifiés.
- X confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

Revisions

Weights:

Revisions to published weights are restricted to major renovations of statistical series and are a part of weight and time base changes. Such changes are described in technical descriptions published at the time of first release of a new or revised series of indexes.

Price Indexes:

Monthly indexes:

Revisions affect mainly the most recent 12 months.

Quarterly indexes:

Revisions affect mainly the most recent eight quarters.

Semi-annual or annual indexes:

Revisions affect mainly the most recent two years. Occasionally there will be revisions to earlier years.

Revisions

Poids:

Les révisions dont font l'objet les poids publiés se limitent aux grandes refontes des séries statistiques et font partie des changements de pondération et de période de référence. Un exposé technique de ces changements est publié au moment de la première parution de séries nouvelles ou révisées d'indices.

Indices de prix:

Indices mensuels:

Les révisions portent surtout sur les 12 derniers mois.

Indices trimestriels:

Les révisions portent surtout sur les huit derniers trimestres.

Indices semestriels ou annuels:

Les révisions portent surtout sur les deux dernières années. Parfois, les révisions peuvent remonter à une date plus lointaine.

Index formula

Unless otherwise stated, price indexes included in this publication have been calculated using a based weighted formula of the following general type.

$$I_{t/o} = \sum_i (P_{t/o,i} / P_{o,i}) \times W_i$$

where $I_{t/o}$ is the price index in time t related to time base period o

\sum_i is the summation over all commodities i

$P_{t/o,i}$ is the ratio of prices of each commodity i between the time base period o and the period t

and W_i is the weight, or relative importance of commodity i

$$W_i = \frac{(P_o \cdot Q_k)_i}{\sum_i (P_o \cdot Q_k)_i}$$

where $P_o Q_k$ are total expenditures in period k on the commodity, expressed in base period prices.

Formule de l'indice

Sauf indication contraire, les indices de prix figurant dans la présente publication ont été calculés à l'aide d'une formule à pondération de base du type général suivant.

$$I_{t/o} = \sum_i (P_{t/o,i} / P_{o,i}) \times W_i$$

où $I_{t/o}$ est l'indice de prix à la période t par rapport à la période de base o

\sum_i est la somme de tous les produits i

$P_{t/o,i}$ est le rapport des prix de chaque produit i entre la période de base o et la période t

et W_i est le poids, ou l'importance relative du produit i

$$W_i = \frac{(P_o \cdot Q_k)_i}{\sum_i (P_o \cdot Q_k)_i}$$

où $P_o Q_k$ sont les dépenses totales de la période k au titre du produit, exprimées selon les prix de la période de base.

(1) Base-weighted indexes relating to the sales of commodities sold by Canadian manufacturing establishments. Weights relate to 1971 sales patterns; establishments are classified to industries as per the 1970 Standard Industrial Classification. Prices are new order transaction prices. No adjustments are made for changes in federal sales tax. — Indices à pondération d'année de base visant les ventes de produits des fabricants canadiens. Le schéma de pondération fait intervenir les ventes observées en 1971; les établissements sont classés par branche d'activité d'après la Classification des activités économiques fonction des variations de la taxe de vente fédérale. (2) The preceding twelve months are revised on the latest data available, and the corresponding months index of the previous year is made final. — Les douze mois précédents sont révisés à partir des dernières données disponibles et l'indice des mois correspondants de l'année précédente est établi de façon définitive. Source: Industry Price Indexes, Catalogue 62-011. — Indices des prix de l'industrie, (n° 62-011 au catalogue).

(1) Base weighted indexes are calculated from rates published in union agreements for main construction trades in 14 major cities. Pay supplements included in the indexes are as follows: vacation pay, statutory holiday pay, pension contribution, employers contribution to private plans health and welfare, employers contribution, industry promotion fund, training fund. Weights were derived mainly from 1961 population census data. Adjustments yielded a weight pattern which approximates labour usage in non-residential building construction. — On calcule les indices de pondération d'année de base à l'aide des taux de salaire figurant dans les conventions collectives des travailleurs des principaux corps de métiers de la construction dans 14 grandes villes. Les avantages salariaux visés par les indices des salaires syndicaux de base qui les prennent en compte sont les suivants: vacances payées, jours fériés payés, contributions au régime de pension, contributions de l'employeur à des régimes privés, santé et bien-être; contributions de l'employeur, caisse de promotions industrielles, caisse de formation. Les coefficients de pondération ont été tirés en grande partie des données du recensement de la population de 1961. Les ajustements ont dégagé un schéma de pondération qui rend compte assez fidèlement de l'emploi de la main-d'œuvre dans la construction non-residentielle (bâtiment).

(2) Indexes. — Indices.

(3) Indexes plus selected pay supplements. — Indices plus certains avantages sociaux.

(1) Base-weighted price indexes relating to machinery and equipment purchased by the construction industry. Price indexes of domestically manufactured machines have been adjusted for changes in federal sales tax; indexes of foreign-produced equipment are adjusted also for changes in exchange and duty. Index-weights were derived mainly from the 1968 Merchandise Division survey of construction equipment distributors. — Indices de prix à pondération d'année de base visant les machines et le matériel achetés par l'industrie de la construction. Les indices des prix des machines de fabrication canadienne ont été ajustés en fonction des variations de la taxe de vente fédérale; les indices du matériel de fabrication étrangère ont également été ajustés en fonction des variations des cours du change et des droits de douane. La pondération des indices s'est appuyée principalement sur les résultats de l'enquête que la Division du commerce a menée en 1968 auprès des distributeurs de matériel de construction.

(1) Source: Bank of Canada Review, Table 19.

(1) Source: Revue de la Banque du Canada, tableau 19.

Characteristics:

Conventional mortgages:

A simple average of rates charged by institutional lenders for residential mortgage loans. (CMHC).

NHA mortgages:

Currently the average of rates charged by approved lenders. (CMHC).

Prime business loans:

Rate of interest charged the most credit-worthy large business borrowers by the chartered banks. The rate shown is a month end rate. (B of C).

Bond yield averages:

Ten provincials — Average percentage yield from a selected list of medium and long term provincial bonds on the last business day of the month. (McLeod, Young, Weir).

(2) The Bank of Canada Review does not provide an average interest rate for the month of February, 1975. Instead a range of interest rates was provided. To prepare an interest rate index the rates were averaged.

Caractéristiques:

Prêts hypothécaires ordinaires:

Taux d'intérêt moyen pratiqué par les établissements de prêts pour des prêts hypothécaires domiciliaires (S.C.H.L.).

Prêts hypothécaires L.N.H.:

Il s'agit de la moyenne des taux pratiqués par les prêteurs autorisés (S.C.H.L.).

Taux d'intérêt privilégiés sur les prêts aux entreprises:

Taux d'intérêt réservé par les banques à charte aux entreprises dont le crédit est de tout premier ordre. Le taux porté en indice est le taux en fin de mois (Banque du Canada).

Moyennes de rendement des obligations:

Dix provinciales — taux de rendement moyen de certaines obligations provinciales à moyen terme et à long terme le dernier jour ouvrable du mois (McLeod, Young, Weir).

(2) La Revue de la Banque du Canada ne fournit pas les taux d'intérêt moyen pour le mois de février 1975. Au lieu de cela une gamme de taux d'intérêt est donnée. Pour préparer l'indice des taux d'intérêt on a établi la moyenne des taux.

(1) The Canada Index is the weighted-average of the general contractors and the sub-trade contractors indexes. The weighted-average of the regional indexes also yields the same Canada index. - L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. La moyenne pondérée des indices régionaux nous donne le même indice que le Canada.

(2) These base-weighted price indexes relate to the use of materials, labour and equipment used in the erection of single detached houses in Canada in 1969. Materials and equipment prices are manufacturers' new order selling prices. Materials indexes are adjusted as relevant for changes in federal sales taxes. Wage rates are basic rates taken from union contracts relating to main trades of importance in residential construction. - Ces indices de prix à pondération de base se rapportent aux matériaux, à la main-d'œuvre et au matériel utilisés au Canada en 1969 dans la construction de maisons individuelles ou unifamiliales. Les prix des matériaux et du matériel sont les prix de vente des nouvelles commandes chez les fabricants. On ajuste les indices des prix des matériaux de manière à prendre en compte les variations de la taxe fédérale de vente. Les taux de salaire sont les taux de base prévus dans les conventions collectives des travailleurs des principaux corps de métiers de la construction résidentielle.

TABLE 5.2. Residential Building Construction Input Price Indexes(1, 2)
TABLEAU 5.2. Indices de prix des entrées dans la construction résidentielle(1, 2)

(1) Trades excluded from the main trades list but included in the Canada total indexes are: excavation, foundation drainage, waterproofing, metal siding plastering, ceramic tiling, ornamental ironwork and sheet metal works. These trades together account for the residual index weight of 8.1%. A main trade includes activity by both the general contractor and the sub-trade contractor. — Les métiers suivants ne figurent pas sur la liste des principaux corps de métiers, mais sont pris en compte dans les indices totaux pour le Canada: l'excavation, le drainage de fondation, l'imperméabilisation des revêtements, le parement métallique, le plâtrage, le carrelage en céramique, le fer forgé et la ferblanterie. Ces métiers rendent compte du coefficient résiduel de 8.1 % de pondération des indices. Un corps de métier principal comprend l'activité des entrepreneurs généraux et celle des sous-traitants.

(2) These base-weighted price indexes relate to the use of materials, labour and equipment used in the erection of single detached houses in Canada in 1969. Materials and equipment prices are manufacturers' new order selling prices. Materials indexes are adjusted as relevant for changes in Federal Sales Taxes. Wage rates are basic rates taken from union contracts relating to main trades of importance in residential construction. — Ces indices de prix à pondération d'année de base se rapportent aux matériaux, à la main-d'œuvre et au matériel utilisés au Canada en 1969 dans la construction de maisons individuelles ou unifamiliales. Les prix des matériaux et du matériel sont les prix de vente des nouvelles commandes chez les fabricants. On ajuste les indices des prix des matériaux de manière à prendre en compte les variations de la taxe fédérale de vente. Les taux de salaires sont les taux de base prévus dans les conventions collectives des travailleurs des principaux corps de métiers de la construction résidentielle.

(1) These current-weighted indexes are derived from dividing the current estimates by the constant dollar estimates of residential gross fixed capital formation. Residential is defined to include single unit houses, rows and highrise apartments. — On obtient ces indices à pondération courante en divisant les estimations courantes par les estimations en dollars constants de la formation brute de capital fixe dans le secteur résidentiel. La construction résidentielle regroupe les maisons individuelles ou unifamiliales, les maisons en rangée et les collectifs d'habitation en hauteur.

(2) These base-weighted price indexes relate to the use of materials, labour and equipment used in the erection of single detached houses in Canada in 1969. Materials and equipment prices are manufacturers' new order selling prices. Materials indexes are adjusted as relevant for changes in federal sales taxes. Wage rates are basic rates taken from union contracts relating to main trades of importance in residential construction. — Ces indices de prix à pondération d'année de base se rapportent aux matériaux, à la main-d'œuvre et au matériel employés au Canada en 1969 dans la construction de maisons individuelles ou unifamiliales. Les prix des matériaux et du matériel sont les prix de vente des nouvelles commandes chez les fabricants. Les Indices des prix des matériaux sont ajustés en fonction des variations de la taxe fédérale de vente. Les taux de salaire sont les taux de base tirés des conventions collectives dans les principaux corps de métiers de la construction résidentielle.

(1) Source: National Income and Expenditure Accounts Catalogue 13-001, Quarterly. These current weighted indexes are derived from the preparation of current and constant dollar estimates on non-residential business gross fixed capital formation. Non-residential is defined here to include engineering construction as well as non-residential building construction. — Comptes nationaux des revenus et des dépenses, publication trimestrielle, n° 13-001 au catalogue. On tire ces indices à pondération courante des estimations en dollars courants et constants de la formation brute de capital fixe des entreprises dans le secteur non résidentiel. La construction non résidentielle regroupe ici les ouvrages d'art et les bâtiments non résidentiels.

(2) Weights used in the 1971=100 indexes are (i) Before 1971, Materials 42.68, Labour 57.32 (ii) 1971 and after, Materials 52.56, Labour 47.44. — Les indices à pondération utilisés pour les indices de prix 1971=100 sont les suivants (i) avant 1971, matériaux 42.68, main-d'œuvre 57.32 (ii) 1971 et après matériaux 52.56, main-d'œuvre 47.44.

(3) Weight used in the 1961=100 indexes are Materials 55.1, Labour 44.9. — Les indices à pondération utilisés pour les indices de prix 1961=100 sont les suivants: Matériaux 55.1, main-d'œuvre 44.9.

(1) Base-weighted indexes relate to gross additions to capital reported by electric utilities in the 1950's and 1960's for generating stations and in the 1950's for all other indexes. Prices are for materials-in-place for such components as embankments and manufacturers' new order selling prices for equipment. The latter are adjusted as necessary for changes in federal sales tax. Imported equipment is also adjusted as relevant for exchange and duty. Substitute prices for labour, materials and equipment-used are utilized where materials-in-place prices are not available. In such cases union basic wage rates and manufacturers' new order selling prices are incorporated into the indexes. - Les indices à pondération de période de base se rapportent aux additions brutes au stock de capital figurant dans les déclarations des services d'électricité au cours des années 50 et 60 pour les centrales et au cours des années 50 dans le cas de tous les autres indices. Les prix visent les matériaux en place dans le cas d'éléments comme les remblais et représentent les prix de vente des nouvelles commandes des fabricants pour le matériel. Ces derniers sont ajustés en fonction des variations de la taxe fédérale de vente. On ajuste également les prix du matériel importé en fonction des variations des cours du change et des droits d'entrée. On fait appel à des prix de substitution pour la main-d'œuvre, les matériaux et le matériel utilisés lorsque l'on ne dispose pas des prix des matériaux en place. Dans ce cas, on porte en indice les taux de salaire syndicaux de base et les prix de vente des nouvelles commandes chez les fabricants.

(1) Base-weighted indexes relate to expenditures for chemical and mineral processing plant made by a variety of industries during the period 1969 to 1972. Materials and equipment prices are domestic and foreign manufacturers' new order selling prices. The resulting indexes are adjusted as relevant for changes in federal sales tax, exchange and duty. Input indexes are used in some instances as substitutes for materials-in-place and service indexes. Substitute materials indexes are calculated as described above. Labour is represented by basic union wage rates, and engineering by Pay Research Bureau salaries for engineers, technicians and clerks. — Ces indices à pondération de période de base se rapportent aux dépenses engagées par diverses industries entre 1969 et 1972 pour des usines de transformation des produits chimiques et minéraux. Les prix des matériaux et du matériel correspondent aux prix de vente des nouvelles commandes des fabricants canadiens et étrangers. Les indices obtenus sont ajustés en fonction des variations de la taxe fédérale de vente, des cours du change et des droits de douane. On substitue dans certains cas des indices des entrées aux indices des matériaux en place et des services. On calcule les indices de remplacement des prix des matériaux suivant la méthode décrite brièvement ci-dessus. Les coûts de main-d'œuvre sont représentés par les taux de salaire syndicaux de base et le coût des études, par les traitements des ingénieurs, des techniciens et des commis établis par le bureau de recherches sur la pâie.

(1) Base-weighted indexes derived from prices reported by Canadian and foreign manufacturers. Changes in Federal sales tax, duty and exchange affect the movement of the indexes. Weights were derived from gross additions to capital expenditures made in the late sixties by British Columbia forestry establishments. Component indexes which are publishable are shown in Table 12.1, Construction Price Statistics, Quarterly Report, catalogue 62-008. — Indices à pondération de période de base fondée sur les prix déclarés par les fabricants canadiens et étrangers. Les variations de la taxe de vente fédérale, des droits de douane et des cours du change influent sur le mouvement des indices. La pondération fait intervenir les dépenses brutes d'addition au stock de capital engagées vers la fin des années 60 par les établissements d'exploitation forestière de la Colombie-Britannique. Les sous-indices publiables sont présentés au tableau 12.1, Statistiques des prix de la Construction, Rapport Trimestriel, (n° 62-008 au catalogue).

(1) These base-weighted price indexes relate to the selling prices of new houses constructed by large residential general contractors. The prices used each month are those pertaining to contracts between buyer and seller signed at that time. — Ces indices des prix, pondérés sur la période de base, se rapportent aux prix de vente de logements neufs construits par les principaux entrepreneurs généraux. Les prix utilisés chaque mois se rapportent aux contrats signés entre l'acheteur et le vendeur à cette époque.

(2) Single-detached houses only. — Maisons individuelles, seulement.

(3) Single-detached, semi-detached and row condominium houses. — Maisons individuelles, maisons jumelées et les unités en rangée.

(1) Index prices are weighted averages of road contractors' selling prices on provincial highway contracts and manufacturers' new order selling prices for materials such as asphalt which are supplied free to the contractor. The latter are adjusted as relevant for federal and provincial sales tax. Years relate to the fiscal years; thus 1973 relates to the period April 1, 1973 to March 31, 1974. Weights for the 1971=100 based index, eight province composite are derived from expenditures by province for highway road construction in 1971. For the 1961=100 based indexes, weights are calculated from provincial highway expenditures for 1956 to 1959. Weights for the Quebec index (1964=100) are calculated from provincial highway expenditures for 1964 to 1967. The index as currently aggregated are final demand indexes for provincial highway road construction. However price behaviour is mainly determined by the contractors' selling prices. For this reason the indexes are placed in the contractors' selling price section of the publication. Indexes which exclude materials supplied free are available on request. - Les prix des indices sont des moyennes pondérées des prix de vente des entrepreneurs en construction routière passant contrat avec les pouvoirs publics provinciaux et des prix de vente des fabricants pour les nouvelles commandes de matériaux comme l'asphalte qui sont fournis gratuitement à l'entrepreneur. Ces dernières prix sont ajustés en fonction des taxes de vente fédérale et provinciales. Les indices portent sur les années financières; ainsi, 1973 correspond à la période allant du 1^{er} avril 1973 au 31 mars 1974. On établit les poids de l'indice à pondération de période de base 1971=100 pour l'indice synthétique pour huit provinces d'après les dépenses de construction routière engagées par les provinces en 1971. Les poids de l'indice à pondération de période de base 1961=100 sont basés d'après les dépenses de constructions routière des provinces de 1956 à 1959. Pour le Québec les poids des indices à pondération de période de base 1964=100 sont calculés d'après les dépenses de voirie provinciales de 1964 à 1967. Il s'agit là des indices de la demande finale pour la construction routière provinciale. Toutefois on détermine en grande partie les mouvements de prix d'après les prix de vente des entrepreneurs. C'est pourquoi les indices sont présentés dans la section de la publication consacrée aux prix des entrepreneurs. On peut obtenir sur demande des indices qui ne prennent pas en compte les matériaux fournis gratuitement.

(1) These base-weighted indexes relate to the price of fabricated structural steel in place including materials, labour, shop fabrication, hauling to jobsite, site erection, overhead and profit and provincial sales tax. Weights of firms are derived from census of manufacturing values. — Ces indices à pondération de l'année de base se rapportent aux prix de l'acier de charpente semi-ouvré mis en place y compris les matériaux la main-d'oeuvre, la fabrication à l'atelier, le transport au chantier, l'érection sur place, les frais généraux, les profits ainsi que les taxes de vente provinciales. Le poids des établissements provient des valeurs recueillies par le recensement annuel des manufacturiers.

(2) Includes Quebec and Atlantic Provinces. — Comprend le Québec et les Provinces de l'Atlantique.

(3) Includes Prairie Provinces and British Columbia. — Comprend les provinces des Prairies et la Colombie-Britannique.

(4) Not yet available. — Pas encore disponible.
