SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form.

For further information write to CANSIM, Current Economic Analysis Division, Statistics Canada, Ottawa, K1A 0Z8 or call (613) 995-7406.

## INTRODUCTION

Construction price statistics comprise price indexes of inputs into construction, contractors selling prices and special purpose aggregations of price indexes for construction and machinery and equipment relating to specified categories of capital expenditures. These statistics are presented in two publications: Construction Price Statistics, Monthly Bulletin Catalogue (62-007), and Construction Price Statistics, Quarterly Report, Catalogue (62-008).

The Monthly Bulletin contains detailed residential and non-residential construction input price indexes, and a summary of the major indexes presented in the Quarterly Report. Construction price statistics will normally be released in the Monthly Bulletin about the end of each month. The Quarterly Report will present full details of all available price indexes and will be released early in the third month of each quarter.

Articles relating to new or revised construction price statistics will be presented in removable centre sections. For the convenience of subscribers, articles will be released in both the Monthly Bulletin and the Quarterly Report.

### Index formula

Unless otherwise stated, price indexes included in this publication have been calculated using a based weighted formula of the following general type.

$$I_{t/o} = \sum_i (P)_{t/o,i} \times w_i$$

where  $I_{t/o}$  is the price index in time t related to time base period o

$\sum_i$  is the summation over all commodities i

$(P)_{t/o,i}$  is the ratio of prices of each commodity i between the time base period o and the period t

and  $w_i$  is the weight, or relative importance of commodity i

$$w_i = \frac{(P_o \cdot Q_k)_i}{\sum_i (P_o \cdot Q_k)_i}$$

where  $P_o$ ,  $Q_k$  are total expenditures in period k on the commodity, expressed in base period prices.

### Revisions

#### Weights:

Revisions to published weights are restricted to major renovations of statistical series and are a part of weight and time base changes. Such changes are described in technical descriptions published at the time of first release of a new or revised series of indexes.

#### Price Indexes:

##### Monthly indexes:

Revisions affect mainly the most recent 12 months.

##### Quarterly indexes:

Revisions affect mainly the most recent eight quarters.

##### Semi-annual or annual indexes:

Revisions affect mainly the most recent two years. Occasionally there will be revisions to earlier years.

La statistique des prix dans la construction comprend des indices des prix des entrées dans la construction, des indices des prix de vente des entrepreneurs et des groupes spéciaux d'indices de prix de la construction et des machines et du matériel pour des catégories déterminées d'immobilisations. Ces statistiques paraissent dans deux publications: Statistiques des prix de la construction, bulletin mensuel (n° 62-007 au catalogue) et Statistiques des prix de la construction, rapport trimestriel (n° 62-008 au catalogue).

Le bulletin mensuel renferme des indices détaillés des prix des entrées dans la construction résidentielle et non résidentielle, et un résumé des principaux indices présentés dans le rapport trimestriel. Les statistiques des prix dans la construction paraîtront habituellement dans le bulletin mensuel vers la fin de chaque mois. Le rapport trimestriel fournira des renseignements détaillés sur tous les indices de prix disponibles et sortira au début du troisième mois de chaque trimestre.

Les articles traitant de statistiques nouvelles ou révisées des prix de la construction seront présentés dans des sections centrales mobiles. Au bénéfice des abonnés, ces articles paraîtront dans le bulletin mensuel et le rapport trimestriel.

### Formule de l'indice

Sauf indication contraire, les indices de prix figurant dans la présente publication ont été calculés à l'aide d'une formule à pondération de base du type général suivant.

$$I_{t/o} = \sum_i (P)_{t/o,i} \times w_i$$

où  $I_{t/o}$  est l'indice de prix à la période t par rapport à la période de base o

$\sum_i$  est la somme de tous les produits i

$(P)_{t/o,i}$  est le rapport des prix de chaque produit i entre la période de base o et la période t

et  $w_i$  est le poids, ou l'importance relative du produit i

$$w_i = \frac{(P_o \cdot Q_k)_i}{\sum_i (P_o \cdot Q_k)_i}$$

où  $P_o$ ,  $Q_k$  sont les dépenses totales de la période k au titre du produit, exprimées selon les prix de la période de base.

### Révisions

#### Poids:

Les révisions dont font l'objet les poids publiés se limitent aux grandes refontes des séries statistiques et font partie des changements de pondération et de période de référence. Un exposé technique de ces changements est publié au moment de la première parution de séries nouvelles ou révisées d'indices.

#### Indices de prix:

##### Indices mensuels:

Les révisions portent surtout sur les 12 derniers mois.

##### Indices trimestriels:

Les révisions portent surtout sur les huit derniers trimestres.

##### Indices semestriels ou annuels:

Les révisions portent surtout sur les deux dernières années. Parfois, les révisions peuvent remonter à une date plus lointaine.

(1) Base-weighted indexes relating to the sales of commodities sold by Canadian manufacturing establishments. Weights relate to 1971 sales patterns; establishments are classified to industries as per the 1970 Standard Industrial Classification. Prices are new order transaction prices. No adjustments are made for changes in federal sales tax. — Indices à pondération d'année de base visant les ventes de produits des fabricants canadiens. Le schéma de pondération fait intervenir les ventes observées en 1971; les établissements sont classés par branche d'activité d'après la Classification des activités économiques de 1970. Les prix utilisés sont les prix à la transaction des nouvelles commandes. On ne procède à aucun ajustement en fonction des variations de la taxe de vente fédérale. (2) The preceding twelve months are revised on the latest data available, and the corresponding months index of the previous year is made final. — Les douze mois précédents sont révisés à partir des dernières données disponibles et l'indice des mois correspondants de l'année précédente est établi de façon définitive. Source: Industry Price Indexes, Catalogue 62-011. — Indices des prix de l'industrie, (n° 62-011 au catalogue).

(1) Indexes are calculated from rates published in union agreements for main construction trades in 22 major cities. Pay supplements included in the indexes are as follows: vacation pay, statutory holiday pay, pension contribution, employers contribution to private plans health and welfare, employers contribution, industry promotion fund, training fund. Weights were derived mainly from 1971 Census data.

(2) Detailed data are available from Cansim matrixes 956-963 or by contacting the Capital Expenditures Prices Section.

(1) On calcule les indices à l'aide des taux de salaire figurant dans les conventions collectives des travailleurs des principaux corps de métiers de la construction dans grandes villes. Les avantages salariaux visés par les indices des salaires syndicaux de base qui les prennent en compte sont les suivants: vacances payées, jours fériés payés, contribution au régime de pension, contributions de l'employeur à des régimes privés, santé et bien-être; contributions de l'employeur, caisse de promotions industrielles, caisse de formation. Les coefficients de pondération ont été tirés en grande partie des données du recensement de 1971.

(2) Des données détaillées peuvent être obtenues de la matrice de Cansim 956-963 ou en s'adressant à la Section des prix des immobilisations.

TABLE 2.2. Union Wage Rate Indexes for Major Cities, Average of 15 Construction Trades(1-2)

1971 = 100

See footnote(s) at end of table.

TABLEAU 2.2. Indices de salaire syndicaux, pour certaines villes, moyenne de 16 métiers de la construction(1,2)

1971=100

Voir note(s) à la fin du tableau.

(1) Indexes are calculated from rates published in union agreements for main construction trades in 22 major cities. Pay supplements included in the indexes are as follows: vacation pay, statutory holiday pay, pension contribution, employers contribution to private plan health and welfare, employers contribution, industry promotion fund, training fund. Weights were derived mainly from 1971 census data.

(2) Detailed data are available from Cansim matrèxes 956-963 or by contacting the Capital Expenditures Prices Section.

(1) On calcule les indices à l'aide des taux de salaire figurant dans les conventions collectives des travailleurs des principaux corps de métiers de la construction dans 14 grandes villes. Les avantages salariaux visés par les indices des salaires syndicaux de base qui les prennent en compte sont les suivantes: vacances payées, jours fériés payés, contributions au régime de pension, contributions de l'employeur à des régimes privés, santé et bien-être; contributions de l'employeur, caisse de promotions industrielles, caisse de formation. Les coefficients de pondération ont été tirés en grande partie des données du recensement de 1971.

(2) Des données détaillées peuvent être obtenues de la matrice de CanSim 956-963 ou en s'adressant à la Section des prix des immobilisations.

(1) Base-weighted price indexes relating to machinery and equipment purchased by the construction industry. Price indexes of domestically manufactured machines have been adjusted for changes in federal sales tax; indexes of foreign-produced equipment are adjusted also for changes in exchange and duty. Index-weights were derived mainly from the 1968 Merchandising Division survey of construction equipment distributors. — Indices des prix à pondération d'année de base visant les machines et le matériel achetés par l'industrie de la construction. Les indices des prix des machines de fabrication canadienne ont été ajustés en fonction des variations de la taxe de vente fédérale; les indices du matériel de fabrication étrangère ont également été ajustés en fonction des variations des cours du change et des droits de douane. La pondération des indices s'est appuyée principalement sur les résultats de l'enquête que la Division du commerce a mené en 1968 auprès des distributeurs de matériel de construction.

(1) Source: Revue de la Banque du Canada, tableau 19.

#### Characteristics:

##### Conventional mortgages:

A simple average of rates charged by institutional lenders for residential mortgage loans. (CMHC).

##### NHA mortgages:

Currently the average of rates charged by approved lenders. (CMHC).

##### Prime business loans:

Rate of interest charged the most credit-worthy large business borrowers by the chartered banks. The rate shown is a month end rate. (B of C).

##### Bond yield averages:

Ten provincials — Average percentage yield from a selected list of medium and long term provincial bonds on the last business day of the month. (McLeod, Young, Weir).

(2) The Bank of Canada Review does not provide an average interest rate for the month of February, 1975. Instead a range of interest rates was provided. To prepare an interest rate index the rates were averaged.

#### Caractéristiques:

##### Prêts hypothécaires ordinaires:

Taux d'intérêt moyen pratiqué par les établissements de prêts pour des prêts hypothécaires domiciliaires (S.C.H.L.).

##### Prêts hypothécaires L.N.H.:

Il s'agit de la moyenne des taux pratiqués par les prêteurs autorisés (S.C.H.L.).

##### Taux d'intérêt privilégiés sur les prêts aux entreprises:

Taux d'intérêt réservé par les banques à charte aux entreprises dont le crédit est de tout premier ordre. Le taux porté en indice est le taux en fin de mois (Banque du Canada).

##### Moyennes de rendement des obligations:

Dix provinciales — taux de rendement moyen de certaines obligations provinciales à moyen terme et à long terme le dernier jour ouvrable du mois (McLeod, Young, Weir).

(2) La Revue de la Banque du Canada ne fournit pas les taux d'intérêt moyen pour le mois de février 1975. Au lieu de cela une gamme de taux d'intérêt est donnée. Pour préparer l'indice des taux d'intérêt on a établi la moyenne des taux.

(1) The Canada Index is the weighted-average of the general contractors and the sub-trade contractors indexes. The weighted-average of the regional indexes also yields the same Canada index. — L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. La moyenne pondérée des indices régionaux nous donne le même indice que le Canada.

(2) These base-weighted price indexes relate to the use of materials, labour and equipment used in the erection of single detached houses in Canada in 1969. Materials and equipment prices are manufacturers' new order selling prices. Materials indexes are adjusted as relevant for changes in federal sales taxes. Wage rates are basic rates taken from union contracts relating to main trades of importance in residential construction. — Ces indices de prix à pondération d'année de base se rapportent aux matériaux, à la main-d'œuvre et au matériel utilisés au Canada en 1969 dans la construction de maisons individuelles ou unifamiliales. Les prix des matériaux et du matériel sont les prix de vente des nouvelles commandes chez les fabricants. On ajuste les indices des prix des matériaux de manière à prendre en compte les variations de la taxe fédérale de vente. Les taux de salaire sont les taux de base prévus dans les conventions collectives des travailleurs des principaux corps de métiers de la construction résidentielle.

TABLE 5.2. Residential Building Construction Input Price Indexes(1, 2)  
TABLEAU 5.2. Indices de prix des entrées dans la construction résidentielle(1, 2)

(1) Trades excluded from the main trades list but included in the Canada total indexes are: excavation, foundation drainage, waterproofing, metal siding plastering, ceramic tiling, ornamental ironworks and sheet metal works. These trades together account for the residual index weight of 8.1%. A main trade includes activity by both the general contractor and the sub-trade contractor. — Les métiers suivants ne figurent pas sur la liste des principaux corps de métiers, mais sont pris en compte dans les indices totaux pour le Canada: l'excavation, le drainage de fondation, l'imperméabilisation des revêtements, le parment métallique, le plâtrage, le carrelage en céramique, le fer forgé et la ferblanterie. Ces métiers rendent compte du coefficient résiduel de 8.1% de pondération des indices. Un corps de métier principal comprend l'activité des entrepreneurs généraux et celle des sous-traitants.

(2) These base-weighted price indexes relate to the use of materials, labour and equipment used in the erection of single detached houses in Canada in 1969. Materials and equipment prices are manufacturers' new order selling prices. Materials indexes are adjusted as relevant for changes in Federal Sales Taxes. Wage rates are basic rates taken from union contracts relating to main trades of importance in residential construction. — Ces indices de prix à pondération d'année se rapportent aux matériaux, à la main-d'œuvre et au matériel utilisés au Canada en 1969 dans la construction de maisons individuelles ou unifamiliales. Les prix des matériaux et du matériel sont les prix de vente des nouvelles commandes chez les fabricants. On ajuste les indices des matériaux de manière à prendre en compte les variations de la taxe fédérale de vente. Les taux de salaires sont les taux de base prévus dans les conventions collectives des travailleurs des principaux corps de métiers de la construction résidentielle.

Source: National Income and Expenditure *Programme Catalogue 13-001*, Quarterly. — Comptes nationaux des revenus et des dépenses, publication trimestrielle, n° 13-001 au catalogue.

- (1) These current-weighted indexes are derived from dividing the current estimates by the constant dollar estimates of residential gross fixed capital formation. Residential is defined to include single unit houses, row and highrise apartments. — On obtient ces indices à pondération courante en divisant les estimations courantes par les estimations en dollars constants de la formation brute de capital fixe dans le secteur résidentiel. La construction résidentielle regroupe les maisons individuelles ou unifamiliales, les maisons en rangée et les collectifs d'habitation en hauteur.
- (2) These base-weighted price indexes relate to the use of materials, labour and equipment used in the erection of single detached houses in Canada in 1969. Materials and equipment prices are manufacturers' new order selling prices. Materials indexes are adjusted as relevant for changes in federal sales taxes. Wage rates are basic rates taken from union contracts relating to main trades of importance in residential construction. — Ces indices de prix à pondération d'année de base se rapportent aux matériaux, à la main-d'œuvre et au matériel employés au Canada en 1969 dans la construction de maisons individuelles ou unifamiliales. Les prix des matériaux et du matériel sont les prix de vente des nouvelles commandes chez les fabricants. Les indices des prix des matériaux sont ajustés en fonction des variations de la taxe fédérale de vente. Les taux de salaire sont les taux de base tirés des conventions collectives dans les principaux corps de métiers de la construction résidentielle.

TABLE 9.1. Price Indexes of Electric Utility Construction(1)  
 TABLEAU 9.1. Indices des prix à la construction dans les services d'électricité(1)

(1) Base-weighted indexes relate to gross additions to capital reported by electric utilities in the 1950's and 1960's for generating stations and in the 1950's for all other indexes. Prices are for materials-in-place for such components as embankments and manufacturers new order selling prices for equipment. The latter are adjusted as necessary for changes in federal sales tax. Imported equipment is also adjusted as relevant for exchange and duty. Substitute prices for labour, materials and equipment-used are utilized where materials-in-place prices are not available. In such cases basic wage rates and manufacturers' new order selling prices are incorporated into the index. - Les indices à pondération de période de base se rapportent aux additions brutes au stock de capital figurant dans les déclarations des services d'électricité au cours des années 50 et 60 pour les centrales et au cours des années 50 dans le cas de tous les autres indices. Les prix visent les matériaux en place dans le cas d'éléments comme les remblais et représentent les prix de vente des nouvelles commandes des fabricants pour le matériel. Ces derniers sont ajustés en fonction des variations de la taxe fédérale de vente. On ajuste également les prix du matériel importé en fonction des variations des cours de change et des droits d'entrée. On fait appel à des prix de substitution pour la main-d'œuvre, les matériaux et le matériel utilisés lorsque l'on ne dispose pas des prix des matériaux en place. Dans ce cas, on porte en indice les taux de salaire syndicaux de base et les prix de vente des nouvelles commandes chez les fabricants.

	1976	158.0	161.2	164.9			

(1) Base-weighted indexes relate to expenditures for chemical and mineral processing plant made by a variety of industries during the period 1969 to 1972. Materials and equipment prices are domestic and foreign manufacturers' new order selling prices. The resulting indexes are adjusted as relevant for changes in federal sales tax, exchange and duty. Input indexes are used in some instances as substitutes for materials-in-place and service indexes. Substitute materials indexes are calculated as described above. Labour is represented by basic union wage rates, and engineering by Pay Research Bureau salaries for engineers, technicians and clerks. - Ces indices à pondération de période de base se rapportent aux dépenses engagées par diverses industries entre 1969 et 1972 pour des usines de transformation des produits chimiques et minéraux. Les prix des matériaux et du matériel correspondent aux prix de vente des nouvelles commandes des fabricants canadiens et étrangers. Les indices obtenus sont ajustés en fonction des variations de la taxe fédérale de vente, des cours du change et des droits de douane. On substitue dans certains cas des indices des entrées aux indices des matériaux en place et des services. On calcule les indices de remplacement des prix des matériaux suivant la méthode décrite brièvement ci-dessus. Les coûts de main-d'œuvre sont représentés par les taux de salaire syndical de base et le coût des études, par les traitements des ingénieurs, des techniciens et des commis établis par le bureau de recherches sur la paie.

(1) Base-weighted indexes derived from prices reported by Canadian and foreign manufacturers. Changes in Federal sales tax, duty and exchange affect the movement of the indexes. Weights were derived from gross additions to capital expenditures made in the late '60s by forestry establishments located East of the Rockies. — Indices à pondération de période de base fondés sur les prix déclarés par les fabricants canadiens et étrangers. Les variations de la taxe de vente fédérale, des droits de douane et des cours du change influent sur le mouvement des indices. La pondération fait intervenir les dépenses brutes d'addition au stock de capital engagé vers la fin des années 60 par les établissements forestiers situés à l'est des Rocheuses.

(1) Base-weighted indexes derived from prices reported by Canadian and foreign manufacturers. Changes in federal sales tax, duty and exchange affect the movement of the indexes. Weights were derived from gross additions to capital expenditures made in the late sixties by British Columbia forestry establishments. Component indexes which are publishable are shown in Table 12.1, Construction Price Statistics, Quarterly Report, catalogue 62-008. — Indices à pondération de période de base fondés sur les prix déclarés par les fabricants canadiens et étrangers. Les variations de la taxe de vente fédérale, des droits de douane et des cours du change influent sur le mouvement des indices. La pondération fait intervenir les dépenses brutes d'addition au stock de capital engagées vers la fin des années 60 par les établissements d'exploitation forestière de la Colombie-Britannique. Les sous-indices publiables sont présentés au tableau 12.1, Statistiques des prix de la Construction, Rapport Trimestriel, (n° 62-008 au catalogue).

(1) These base-weighted price indexes relate to the selling prices of new houses constructed by large residential general contractors. The prices used each month are those pertaining to contracts between buyer and seller signed at that time. - Ces indices des prix, pondérés au mois, se rapportent aux prix de vente de logements neufs construits par les principaux entrepreneurs généraux. Les prix utilisés chaque mois se rapportent aux contrats signés entre l'acheteur et le vendeur à cette époque.

(2) Single-detached houses only. - Maisons individuelles, seulement.

(3) Single-detached, semi-detached and row condominium houses. - Maisons individuelles, maisons jumelées et les maisons en rangée.

(1) Index prices are weighted averages of road contractors' selling prices on provincial highway contracts and manufacturers' new order selling prices for materials such as asphalt which are supplied free to the contractor. The latter are adjusted as relevant for federal and provincial sales tax. Years relate to the fiscal years; thus 1973 relates to the period April 1, 1973 to March 31, 1974. Weights for the 1971=100 based index, eight province composite are derived from expenditures by province for highway road construction in 1971. For the 1961=100 based indexes, weights are calculated from provincial highway expenditures for 1956 to 1959. Weights for the Quebec index (1964=100) are calculated from provincial highway expenditures for 1964 to 1967. The index as currently aggregated are final demand indexes for provincial highway road construction. However price behaviour is mainly determined by the contractors' selling prices. For this reason the indexes are placed in the contractors' selling price section of the publication. Indexes which exclude materials supplied free are available on request. — Les prix des indices sont des moyennes pondérées des prix de vente des entrepreneurs en construction routière passant contrat avec les pouvoirs provinciaux et des prix de vente des fabricants pour les nouvelles commandes de matériaux comme l'asphalte qui sont fournis gratuitement à l'entrepreneur. Ces derniers prix sont ajustés en fonction des taxes de vente fédérale et provinciales. Les indices portent sur les années financières; ainsi, 1973 correspond à la période allant du 1<sup>er</sup> avril 1973 au 31 mars 1974. On établit les poids de l'indice à pondération de période de base 1971=100 pour l'indice synthétique pour huit provinces d'après les dépenses de construction routière engagées par les provinces en 1971. Les poids de l'indice à pondération de période de base 1961=100 sont basés d'après les dépenses de constructions routière des provinces de 1956 à 1959. Pour le Québec les poids des indices à pondération de période de base 1964=100 sont calculés d'après les dépenses de voirie provinciales de 1964 à 1967. Il s'agit là des indices de la demande finale pour la construction routière provinciale. Toutefois on détermine en grande partie les mouvements de prix d'après les prix de vente des entrepreneurs. C'est pourquoi les indices sont présentés dans la section de la publication consacrée aux prix des entrepreneurs. On peut obtenir sur demande des indices qui ne prennent pas en compte les matériaux fournis gratuitement.

(1) These base-weighted indexes relate to the price of fabricated structural steel in place including materials, labour, shop fabrication, hauling to jobsite, site erection, overhead and profit and provincial sales tax. Weights of firms are derived from census of manufacturing values. - Ces indices à pondération de l'année de base se rapportent aux prix de l'acier de charpente semi-ouvré mis en place y compris les matériaux la main-d'oeuvre, la fabrication à l'atelier, le transport au chantier, l'érection sur place, les frais généraux, les profits ainsi que les taxes de vente provinciales. La pondération des établissements provient des valeurs recueillies par le recensement annuel des manufacturiers.

(2) Includes Quebec and Atlantic Provinces. - Comprend le Québec et les provinces de l'Atlantique.

(3) Includes Prairie Provinces and British Columbia. - Comprend les Provinces des Prairies et la Colombie-Britannique.

TABLE 15.2 Precast Concrete Price Indexes  
 TABLEAU 15.2 Indices des prix du béton précoulé  
 (Provinces) sales tax included - Y compris la taxe de vente provinciale)
