RATES AND INDEX NUMBERS OF HOSPITAL CHARGES

According to returns received by the Dominion Bureau of Statistics from 198 hospitals, rates charged in 1929 averaged 6.6 percent higher than in 1926, and 1.8 percent above those for 1928. Weighted index numbers of certain hospital charges and costs, using 1926 as well as 1913 data as the basis of comparison, are given on the following pages. Separate indexes have been constructed for rates of public wards, semi-private and private rooms, operating room charges, and the cost of maintenance per patient per day. It will be seen that all of these indexes show an almost unbroken advance from 1913 to 1929.

A general survey of the changes which occurred in 1929 indicates that the greatest increases in rates were for public wards. Semi-private room rates moved upward very slightly, while private room rates were shown as a little lower for the first time since 1913. Operating room charges remained almost stationary. The average cost of maintenance per patient per day advanced again, and was 110.4 percent above the figure given for 1913. It is interesting to compare this advance with that registered by rates, which have apparently risen only by about 90 percent according to the movement of a weighted average of the rate figures which follow.

An average of the public ward charges made in 1929 amounted to \$2.03, as compared with \$1.96 in 1928. This item was \$1.83 in 1926 and \$1.02 in 1913, an almost uninterrupted increase having occurred since that time. Provincial average rates in 1929 ranged between \$1.50 for Prince Edward Island and \$2.52 for British Columbia. The Dominion index number of public ward charges rose from 107.5 in 1928 to 111.3 in 1929, having been 55.8 in 1913.

Semi-private room charges moved but slightly from an average of \$2.85 in 1928 to \$2.87 in 1929. The range of provincial rates in 1929 was marked by the figure for Ontario, calculated as \$2.20 and that for Alberta, given as \$3.52. The Dominion index number for semi-private room charges has advanced steadily from 54.0 in 1913 to 102.1 in 1929.

Private room charges averaged \$5.23 for the Dominion in 1929, as against \$5.25 in 1928. Moderate reductions for Quebec, Ontario and British Columbia, more than counterbalanced increases for Nova Scotia, Manitoba and Alberta, causing the first decline in this average since 1913, as noted above.

Operating room charges obtained by averaging rates given for major and minor operations, were \$8.37 in 1929 as against \$8.36 in 1928. Averages advanced slightly for Nova Scotia, New Brunswick, and Saskatchewan, but otherwise were unchanged. The Dominion index number for operating room charges was 102.3 in 1929, as compared with 102.2 in 1928, and 63.8 in 1913.

The average cost of maintenance per patient per day as indicated by the returns received mounted from \$3.42 in 1928 to \$3.62 in 1929. These figures represent a complete cost estimate, including such items as taxes, depreciation, insurance, interest, etc., in addition to the more or less standard items of food, wages, medical and institutional supplies, heat, light, power, and water. It is worthy of note that separate calculations including only the latter set of items, remained in the average practically stationary in 1929 while an advance of 4.0 p.c. occurred for complete costs. The cost of maintenance per patient per day has risen almost without interruption since 1913, when the Dominion average was \$1.68. The Dominion index during the interval from 1913 to 1929 has mounted from 49.5 to 104.2

An interesting commentary on increased cost of maintenance figures is furnished by reports regarding indigent patients treated by hospitals. Such patients of course pay only fractional amounts of the actual cost of their treatments, or else are treated free. The number of indigents reported in 1929 for 198 institutions was 340,593, which indicated an increase of roughly 10 percent over figures given for 1928.
