RATES AND INDEX NUMBERS OF HOSPITAL CHARGES

According to returns received by the Dominion Bureau of Statistics from 225 hospitals, rates charged in 1933 averaged 1.4 per cent. below those for 1932, but 4.4 per cent. above the 1926 level. The decline for 1933 marked the continuation of a downward movement first apparent in 1931. Weighted index numbers and average costs for each province, and for the Dominion as a whole, are shown on the pages which follow. Separate indexes have been calculated for rates of public wards, semi-private and private rooms, operating room charges and maintenance costs per patient per day. Index numbers given are based on average costs both in 1913 and 1926.

A survey of changes which occurred in 1933 indicates that the greatest decrease in rates was for public wards, the index of which changed from 111.4 to 109.5 (1926=100), a decline of 1.7 per cent. Private room rates moved down from 100.9 to 99.8, and semi-private from 101.5 to 100.3, indicating approximate declines of 1.1 and 1.2 per cent. respectively. Operating room charges showed the least movement, the index at 99.6 being 1.0 per cent. below the number for 1932. An index showing the cost of caring for patients registered a sharp decline, being 93.6 for 1933 as compared with 99.0 for the previous year. Returns made by hospitals show that the average number of patient days between 1932 and 1933 had dropped 16.3 per cent. in the case of private wards, and 13.7 per cent. for semi-private wards. The patient days recorded for public wards, on the other hand, had increased 1.7 per cent. These figures form an interesting commentary on the decline of maintenance costs, which was appreciably larger than that of room rates. The relatively larger proportion of patients treated in public wards doubtless was an important factor in reducing maintenance costs, and likewise a cause of lower hospital revenue from patients.

An average of public ward charges throughout the Dominion in 1933 was \$1.99 as against \$2.03 in 1932. The greatest decrease in provincial figures was for Manitoba, where the rate receded from \$1.77 to \$1.51. Other provinces showing lower rates were Quebec, Ontario, Saskatchewan, and Alberta.

Semi-private room rates changed slightly, from \$2.85 in 1932 to \$2.82 for 1933, decreases in averages for Prince Edward Island, Nova Scotia, Quebec, Ontario, and Saskatchewan being more important than advances for Alberta and British Columbia.

Private room rates for the Dominion averaged \$5.06 in 1933 as against \$5.11 for 1932. Decreases for New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia were accountable for the downward movement.

An average of operating room charges fell from \$8.23 to \$8.14, owing to decreases for Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and Alberta.

The average cost of maintenance per patient per day for Canada in 1933 was \$3.25 as against \$3.44 in 1932. The corresponding figure for 1913 was \$1.68. This figure includes basic costs such as food, medical supplies, professional care, light, heat, insurance, interest, depreciation, etc. Owing to differing methods of accounting these figures cannot be considered strictly comparable as between institutions or even provinces, but it is believed that they measure cost trends accurately.
