SYMBOLS

The following standard symbols are used in Statistics Canada publications:

.. figures not available.

... figures not appropriate or not applicable.

- nil or, in this publication less than half unit expressed.

-- amount too small to be expressed.

P preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Voici la signification des signes conventionnels suivants utilisés dans les publications de Statistique Canada:

.. nombres indisponibles.

... n'ayant pas lieu de figurer.

- néant ou, dans la présente publication, inférieur à la moitié de l'unité exprimée.

-- nombres infimes.

P nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

A NOTE ON CANSIM

Some current historical statistics on Department Store Sales and Stocks (Matrix No. 112), as well as many other series, are available to the public from Statistics Canada's computerized data bank CANSIM (Canadian Socio-Economic Information Management System) via terminal, on computer printouts, or in machine readable form. For further information contact the CANSIM staff, Current Economic Analysis Division, Statistics Canada, Ottawa, K1A 0Z8 (telephone 613-995-7406), or the regional advisors at the Statistics Canada offices located across Canada.

NOTE AU SUJET DE CANSIM

La banque de données informatisées de Statistique Canada CANSIM (Système canadien d'information socio-économique) fournit au public certaines statistiques actuelles et historiques sur les Ventes et stocks des grands magasins (matrice n° 112) et sur de nombreuses autres séries, par le biais d'un terminal, d'imprimés d'ordinateur ou de supports sous une forme lisible par une machine. Pour plus de renseignements, s'adresser au personnel de CANSIM, Division de l'analyse de conjoncture, Statistique Canada, Ottawa, K1A 0Z8 (téléphone 613-995-7406), ou aux conseillers régionaux des bureaux de Statistique Canada situés à travers le Canada.

| List of Department Store Organizations | 24 | Liste des organisations des grands magasins | 24 |

INTRODUCTION

The present universe of department store firms was originally derived from the 1971 Census of Merchandising and Services. A "List of Department Store Organizations" can be found at the end of this publication.

For the purpose of this publication only the activities of actual department store "locations" of department store organizations are considered, thereby enabling the "location" concept, which is common to both the census and the current survey program of the Merchandising and Services Division, to be utilized. (The census also measures the activities of "establishments", however, this concept is not used in the monthly survey of department stores.) Under the "location" concept, department store data contained in this publication exclude the activities of other kinds of businesses which may be operated by the reporting department store firms. For example, non-department store locations are classified to the kinds of business most appropriate to their commodity structure with the catalogue sales activity of department store organizations classified to the "General Merchandise Stores" kind of business category.

The business done by concessions located in department store outlets for the purpose of this publication is considered as part of the overall business of the outlets in which they are located. However, sales of an associated large food department (or store) are included only if it is an integral part of the overall department store operation and is not identified to the public by any name which differs from that of the department store with which it is associated. The rationale underlying this approach is as follows: for purposes of market research or urban planning, a department store (the largest type of mass merchandising activity in Canada) together with its leased departments, if any, is considered to be a totality; that is, it competes in the market place as one structure, rather than as a number of smaller stores.

INTRODUCTION

L'univers des firmes de grands magasins utilis  aujourd'hui est fond  sur le recensement du commerce et des services de 1971. La "Liste des organisations de grands magasins" est donn e   la fin de cette publication.

Aux fins de cette publication, seules les activit s des "locaux d'affaires" r eels des firmes de grands magasins sont  tudi es; on peut ainsi faire appel au concept des "points de vente", qui est commun au recensement et au programme d'enqu te courant de la Division du commerce et des services. (Bien que le recensement mesure  gale ment les activit s des " tablissements", cette unit  d'observation n'est pas utilis e dans l'enqu te mensuelle sur les grands magasins.) En vertu de la notion de "local d'affaires", les donn es sur les grands magasins pr sent es dans cette publication ne tiennent pas compte d'autres genres de commerce auxquels peuvent s'adonner les firmes d clarantes. Ainsi, les points de vente qui ne r pondent pas   la d finition des grands magasins sont attribu s   la cat gorie commerciale qui convient le mieux aux diverses marchandises offertes;   titre d'exemple, les bureaux de vente par catalogue des firmes de grands magasins sont class s dans le genre de commerce "magasins de marchandises diverses".

Les affaires r alis es par les concessions  tablies dans les grands magasins sont, aux fins de la pr sente publication, consid r es comme partie des affaires globales du magasin o  sont  tablies les concessions. Cependant, les ventes d'un important rayon (ou magasin) d'alimentation associ  ne seront incluses que si le rayon ou magasin fait partie int grante de l'exploitation g n rale du grand magasin et n'est pas connu du public sous un nom diff rent de celui du grand magasin auquel il est associ . Cette m thode se justifie du fait que les sp cialistes des  tudes de m ch  et les urbanistes consid r ent comme un tout le grand magasin (qui constitue le plus important genre de grande surface au Canada) et les rayons de concessions; autrement dit, le grand magasin se pr sente sur le m ch  comme un  tablissement unique et non comme un regroupement de petits magasins.

Definitions

Retail Location

A retail location, as defined by Statistics Canada, is a business location (usually a store) in which the principal activity is the sale of merchandise and related services to the general public for household or personal consumption.

Department Store

A retail location is defined as a department store outlet if it possesses the following characteristics. It must sell the following general lines of merchandise:

Family clothing and apparel. This commodity group is composed of some or all of the following lines: women's and misses' dresses, housedresses, aprons and uniforms; women's and misses' coats and suits; women's and misses' sportswear; furs; infants' and children's wear; girls' and teenage wear; lingerie and women's sleepwear; intimate apparel; millinery; women's and girls' hosiery; women's and girls' gloves, mitts and accessories; women's, misses' and children's footwear; men's clothing; men's furnishings; boys' clothing and furnishings; men's and boys' footwear. **Note:** The outlet must sell at least six of the commodity lines listed above, with at least one of the commodities being men's and boys' clothing or furnishings. At least 20% of the outlet's total sales must be derived from the family clothing and apparel group.

Furniture, appliance and home furnishings. This commodity group is composed of some or all of the following lines: linens and domestics; china and glassware; home furnishings; furniture, wooden and upholstered goods for living room, dining room and bedroom; major appliances; television, radio and music; hardware and housewares. **Note:** The outlet must sell at least four of the commodity lines listed above, with at least one of the commodities being furniture (wooden and upholstered goods for dining room and/or living room and/or bedroom). At least 10% of the outlet's total sales must be derived from the furniture, appliance and home furnishings group.

All other (miscellaneous). This category includes all commodities sold by the outlet but not shown above, such as: toiletries, cosmetics and drugs; photographic equipment and supplies; piece goods; notions and smallwares; jewellery; sporting goods and luggage; stationery, books and magazines; and food. **Note:** The outlet must sell at

Définitions

Point de vente au détail

Suivant la définition de Statistique Canada, un point de vente au détail est un local d'affaires (habituellement un magasin) dont l'activité principale est la vente de marchandises et des services connexes au grand public pour la consommation ménagère ou personnelle.

Grand magasin

Un point de vente au détail est un grand magasin s'il possède les caractéristiques suivantes:

Vêtements pour la famille. Ce groupe comprend les articles suivants: robes pour dames et jeunes filles, robes de ménage, tabliers et uniformes; manteaux et tailleurs pour dames et jeunes filles; vêtements de sport pour dames et jeunes filles; fourrures; vêtements de bébés et d'enfants; vêtements de fillettes et d'adolescentes; lingerie et vêtements de nuit pour dames; sous-vêtements; chapeaux; bas pour dames et fillettes; gants, moufles et articles de parure pour dames et fillettes; chaussures pour dames, jeunes filles et enfants; vêtements pour hommes; articles d'habillement pour hommes; vêtements et articles d'habillement pour garçons; chaussures pour hommes et garçons. **Nota:** Le magasin doit tenir au moins six des séries mentionnées ci-dessus, dont au moins une doit être les vêtements ou articles d'habillement pour hommes et garçons. Au moins 20 % des ventes globales du magasin doivent se faire dans le groupe de vêtements pour la famille.

Meubles, appareils et articles d'ameublement ménager. Ce groupe comprend les articles suivants: literie et linge de maison; porcelaine et verrerie; articles d'ameublement ménager; meubles, de bois ou rembourrés, pour salle de séjour, salle à manger ou chambre à coucher; gros appareils, télévision, radio et musique; quincaillerie et articles de ménage. **Nota:** Le magasin doit tenir au moins quatre des séries mentionnées ci-dessus, dont au moins une doit être des meubles (de bois ou rembourrés pour salle à manger et (ou) salle de séjour et (ou) chambre à coucher). Au moins 10 % des ventes globales du magasin doivent provenir du groupe des meubles, appareils et articles d'ameublement ménager.

Tous autres articles (divers). Cette catégorie comprend toutes les marchandises que tient le magasin, mais qui ne figurent pas ci-dessus, telles que: articles de toilette, cosmétiques et médicaments; appareils et fournitures photographiques; tissus à la pièce; mercerie et menus articles; bijouterie; articles de sport et valises; papeterie, livres et revues; et aliments.

least three different commodity lines with not one of these lines representing more than 50% of the total store sales. At least 10% of the outlet's total sales must be derived from the all other or miscellaneous groups.

Total Net Sales and Receipts

They are defined as the total sales of merchandise and receipts from repairs, equipment rental, restaurant and other services, less returns, adjustments and discounts. Trade-in allowances are not deducted. Commissions earned from the sales of goods owned by others and proprietors' withdrawals of goods (at retail) for personal use are included. Non-trading revenues, bad debts recovered and direct sales taxes are excluded.

Stocks

They are defined as the selling value of inventory on hand at the end of the month or as at the end of the fiscal period falling nearest the end of the calendar month.

Accounts Receivable

They are defined as customers' accounts and notes receivable as at the end of the month, as well as all new credit granted during the month, less payments received. Accounts discounted with banks, paper sold to sales finance companies, or amounts owing on account of credit-card plans, are excluded. Accounts receivable used as security for bank loans are not considered as discounted if still payable and are therefore included.

Methodology

The monthly sales values, published at the Canada, provincial and metropolitan area levels, are based on the universe of department store organizations. A 100% response rate is aimed for each month with the publication usually delayed if large department store organizations have not responded in time. The monthly sales figures are estimated when necessary, due only to late response, by applying an imputation method which is unique to each organization.

The monthly sales values by department, published at the Canada level, are based only on the organizations which provide the

Nota: Le magasin doit tenir au moins trois des séries mentionnées ci-dessus, dont aucune ne doit représenter plus de 50 % des ventes globales du magasin. Au moins 10 % des ventes globales du magasin doivent provenir des groupes tous autres articles ou divers.

Ventes et recettes nettes totales

Il s'agit du total des ventes de marchandises et des recettes provenant de réparations, de location de matériel, de la vente de repas et d'autres services, moins les rendus, les rajustements et les remises. La valeur des reprises n'est pas déduite. Les commissions sur la vente de marchandises appartenant à autrui et la valeur (au détail) des marchandises prélevées par le propriétaire pour son usage personnel sont comptées. Les recettes hors exploitation, les recouvrements de mauvaises créances et les taxes de vente directes sont exclus.

Stocks

Cette rubrique englobe la valeur marchande des stocks détenus à la fin du mois ou de la période financière la plus rapprochée.

Comptes à recevoir

Il s'agit des comptes et billets à recevoir des clients à la fin du mois, ainsi que de tout nouveau crédit consenti au cours du mois, moins les paiements reçus. Les comptes escomptés à la banque, les titres vendus à des sociétés de financement des ventes et les montants dus en vertu d'un régime de cartes de crédit ne sont pas comptés. Les comptes à recevoir servant à garantir un emprunt bancaire ne sont pas considérés comme étant escomptés s'ils sont encore payables; ils sont donc inclus.

Méthodologie

Le chiffre des ventes mensuelles, publié pour le Canada, les provinces et les régions métropolitaines, est établi en fonction de l'univers des firmes de grands magasins. Puisque l'on vise chaque mois un taux de réponse de 100 %, la publication est habituellement retardée si une grande firme n'a pas fait parvenir sa déclaration dans les délais prévus. Dans le cas d'une réponse tardive, il est possible de calculer un chiffre estimatif des ventes mensuelles grâce à une méthode d'imputation qui est unique à chaque firme.

Le chiffre des ventes mensuelles par rayon publié pour le Canada n'est fondé que sur les firmes qui présentent la ventilation requise des

required breakdown of sales. The percentage distributions of sales by department, calculated from the reporting organizations, are applied to the monthly Canada sales total in order to provide an estimate of sales by department at the Canada level.

The monthly stock values by department, published at the Canada level, are based only on the organizations which provide the required breakdowns of sales and stocks. A stock-to-sale ratio for each department, calculated from the reporting organizations, is applied to the corresponding department's monthly sales estimate in order to provide an estimate of stocks by department at the Canada level.

The monthly accounts receivable values, published at the Canada level, are based on a subset of department store organizations which are known to have accounts receivable. Data for late respondents are estimated by applying the monthly percentage change in accounts receivable, calculated from the reporting organizations, to the previous month's data of each organization that was late in reporting.

Data Reliability

Non-sampling Errors

The monthly Department Store Sales and Stocks Survey is a complete enumeration of all department store locations as reported by the organizations listed at the end of this publication. The survey can be considered as a complete census of the population under consideration and therefore not subject to sampling errors; however, even under a census situation, with a complete enumeration each month of all known department store locations, errors in published data can occur. These errors, called non-sampling errors, are present whether a sample or a complete census of the population is taken and can be attributed to one or more of the following sources:

Coverage error. This error results from incomplete listing and inadequate coverage of the population of interest.

Data response error. This error may be due to questionnaire design and the characteristics of the question, inability or unwillingness of the respondent to provide correct information, misinterpretation of the questions because of definitional difficulties and different tendencies of different interviewers in explaining questions or interpreting responses under different modes of communication.

ventes. La répartition en pourcentage des ventes par rayon obtenues auprès des firmes déclarantes est appliquée au chiffre mensuel des ventes totales pour le pays afin d'établir une estimation des ventes par rayon pour l'ensemble du Canada.

Le chiffre des stocks mensuels par rayon publié pour le Canada n'est fondé que sur les firmes qui présentent la ventilation requise des ventes et des stocks. Pour chaque rayon, le rapport des ventes aux stocks (calculé à partir des déclarations des firmes) est appliqué à l'estimation des ventes mensuelles afin de produire une estimation des stocks pour le Canada.

Le chiffre des comptes à recevoir mensuel pour l'ensemble du pays provient des firmes de grands magasins qui ont de tels comptes. Les données relatives aux enquêtés retardataires sont estimées comme suit: on calcule d'abord la variation en pourcentage des comptes à recevoir des firmes déclarantes, puis on la fait porter sur les chiffres du mois précédent de la firme retardataire.

Fiabilité des données

Erreurs non liées à l'échantillonnage

L'enquête mensuelle sur les ventes et les stocks des grands magasins porte sur tous les points de vente des firmes de grands magasins énumérées à la fin de cette publication. Étant donné qu'elle peut être considérée comme un recensement exhaustif de la population observée, elle ne risque pas de comporter des erreurs d'échantillonnage. Par contre, même les données publiées d'un recensement qui dénombre intégralement à chaque mois l'ensemble des points de vente connus des grands magasins peuvent être entachées d'erreurs. Celles-ci, dites non liées à l'échantillonnage, se retrouvent tant dans les recensements que dans les enquêtes par échantillonnage. Elles sont dues à un ou plusieurs facteurs parmi les suivants:

Le champ couvert par l'enquête. L'erreur résulte d'un listage incomplet et d'une couverture insuffisante de la population visée.

La réponse. Ici, l'erreur peut être attribuable à la conception du questionnaire et aux caractéristiques de la question, à l'incapacité ou au refus de l'enquêté de fournir des renseignements exacts, à l'interprétation fautive des questions due à des problèmes d'ordre sémantique, ou aux variations, d'un interviewer à l'autre et selon le mode de communication retenu, dans l'explication des questions et dans l'interprétation des réponses.

Non-response error. Some respondents may refuse to answer questions, some are unable to respond, while others may be too late in responding. Data for the non-responding units can be imputed using the data from responding units or some earlier data on the non-responding units if available. The extent of error due to imputation is usually unknown and is very much dependent on any characteristic differences between the respondent group and the non-respondent group in the survey. This error generally increases with increases in the non-response rate and attempts are therefore made to obtain as high a response rate as possible.

Processing error. These are the errors that may occur at various stages of processing such as coding, data entry, verification, editing, weighting, tabulation, etc.

Non-sampling errors are difficult to measure. More important, non-sampling errors require control so that their presence does not impair the use and interpretation of final results. With regard to the estimates of this publication all attempts have been made to minimize the non-sampling errors: department store locations have been defined in a most precise manner; the questionnaires used in the survey have been carefully designed to minimize different interpretations; detailed acceptance testing has been carried out for the different stages of editing and processing; and every possible effort has been made to reduce the non-response rate as well as the response burden.

Non-sampling Error Measures

One source of non-sampling error is the non-response error. Text Table I assists users in evaluating this error, two response measures are derived, namely, the **response rate** which is a measure of the proportion of those units which have responded in time for inclusion in this publication and the **response fraction**, which is a measure of the data response rate, and is the proportion of the published data which is based upon actual reported data.

The unit used in the Department Store Sales and Stocks Survey for derivation of the **response rate** is based on (1) the geographical regions, i.e., the 10 provinces, the two territories and the four metropolitan areas, in which a department store organization operates department store locations and (2) the department store organizations themselves. For example, a department store firm reporting for 20 stores in Ontario would be considered as one survey unit and one organizational unit while an

La non-réponse. Certains enquêtés refusent de répondre, d'autres en sont incapables et d'autres encore répondent trop tard. Les données relatives aux non-répondants peuvent être imputées à partir des chiffres fournis par les répondants ou à l'aide des statistiques antérieures sur les non-répondants, si elles existent. On ne connaît généralement pas l'importance de l'erreur d'imputation; celle-ci varie beaucoup selon les caractéristiques qui distinguent les répondants des non-répondants. Comme ce type d'erreur prend habituellement de l'ampleur à mesure qu'augmente le taux de non-réponse, on s'efforce d'obtenir le meilleur taux de réponse possible.

Le traitement. L'erreur peut se produire lors des diverses étapes du traitement, telles que le codage, l'entrée, la vérification, la pondération et la totalisation.

Il est difficile de mesurer les erreurs non liées à l'échantillonnage. En outre, il faut les cerner de sorte qu'elles ne nuisent pas à l'utilisation ou à l'interprétation des chiffres définitifs. S'agissant des estimations du présent bulletin, tout a été mis en oeuvre afin de minimiser ce genre d'erreur. Ainsi, les points de vente des grands magasins ont été définis avec beaucoup de précision; les questionnaires ont été conçus avec soin afin de réduire au minimum le nombre d'interprétations éventuelles; les diverses étapes de vérification et de traitement ont fait l'objet de contrôles d'acceptation détaillés; enfin, on n'a absolument rien négligé pour que le taux de non-réponse et le fardeau de réponse soient faibles.

Estimation des erreurs non liées à l'échantillonnage

Parmi les erreurs non liées à l'échantillonnage, on retrouve l'erreur de non-réponse. Le tableau explicatif I donne deux mesures de la réponse qui aideront l'utilisateur à évaluer ce genre d'erreur. Le **taux de réponse** représente la proportion des unités qui ont répondu assez tôt pour être incluses dans la présente publication. La **fraction de réponse**, par contre, est le taux de réponse des données, c'est-à-dire la proportion des chiffres publiés qui est fondée sur des renseignements réellement déclarés.

L'unité utilisée pour calculer le **taux de réponse** de l'enquête sur les ventes et les stocks des grands magasins est fondée sur (1) les régions (c'est-à-dire les 10 provinces, deux territoires et quatre régions métropolitaines) où les firmes de grands magasins exploitent des points de vente et (2) les firmes de grands magasins elles-mêmes. Par exemple, une firme de grands magasins qui produit une déclaration pour 20 magasins en Ontario est considérée comme une unité d'enquête et une organisation, alors qu'une firme dont la déclaration porte sur cinq magasins à

organization reporting for five stores in Vancouver, 10 in British Columbia (excluding Vancouver) and two in Yukon would be considered as three survey units but only one organizational unit.

The data variables under consideration for derivation of the **response fraction** are namely sales, stocks and accounts receivable.

Text Table I gives the non-sampling reliability of the survey data with respect to the non-response error. The response rate is given as the percentage of survey units and the corresponding organizational units which have responded in time for inclusion in this publication. The response fraction is given as the percentage of the published data which is based upon actual reported data submitted by department stores. For example, a cell of 20 organizational units in which five respond for a particular month would have a response rate of 25% in terms of these units. If the five units represented \$8 million out of a published estimate of \$10 million, the response fraction would be 80%. In cases such as these, the response rate alone would tend to underestimate the reliability of the estimate and both measures should be considered.

Vancouver, 10 en Colombie-Britannique (sauf Vancouver) et deux au Yukon représente trois unités d'enquête, mais seulement une organisation.

Les variables dont il faut tenir compte pour calculer la fraction de réponse sont les ventes, les stocks et les comptes à recevoir.

Le tableau explicatif I donne la fiabilité des données d'enquête en matière d'erreurs dues à la non-réponse. Le taux de réponse représente le pourcentage des unités d'enquête et des unités organisationnelles correspondantes qui ont répondu assez tôt pour être incluses dans le présent bulletin. Par contre, la fraction de réponse constitue le pourcentage des données publiées qui sont fondées sur des renseignements effectivement déclarés par les grands magasins. Par exemple, le taux de réponse d'une cellule comportant 20 unités donc cinq répondent lors d'un mois donné atteindrait 25 %. Cependant, si les cinq unités représentent \$8 millions sur l'estimation publiée de \$10 millions, la fraction de réponse s'élèverait à 80 %. Comme le taux de réponse aurait, à lui seul, tendance à déprécier la fiabilité de l'estimation dans un tel cas, il faudrait tenir compte des deux unités de mesure.

Seasonal Adjustment

Seasonal adjustment⁽¹⁾ separates and measures the effect of recurring intra-annual variations resulting from normal differences in weather, holidays with invariable dates, or other events with a similar pattern of timing. An additional adjustment due to trading day variation is made for the department store series. This variation stems from the fact that a particular day of the week may occur five times in a particular month one year and only four times in the corresponding month in other years. This additional adjustment is made prior to the seasonal adjustment but is treated as part of the seasonal adjustment process.

The department store series have been seasonally adjusted using ARIMA option of the X-11-ARIMA seasonal adjustment program.⁽²⁾ This new method of seasonal adjustment consists of extending the original series with one year of estimated values prior to the seasonal adjustment procedure. The estimated values are forecasts made by ARIMA models which have been fitted to the original series.

The X-11 part of the X-11-ARIMA program relies primarily on the ratio-to-moving average method to smooth the extended series as a preliminary estimate of the trend-cycle, computing ratios of the extended original series to the trend-cycle estimates and estimating seasonal factors from these ratios. These procedures are repeated a number of times to produce the final seasonal factors.⁽³⁾

While seasonal adjustment provides a deeper understanding of the underlying trend-cycle of a series, the adjusted series still contains an irregular component. Small changes between months in the adjusted series may simply be irregular movements and, to obtain a clearer insight into the underlying trend, users should examine the adjusted series over a number of months.

To assist the user, the Months for Cyclical Dominance number, MCD, is provided.⁽⁴⁾ The MCD is the shortest monthly span for which a certain ratio becomes and remains less than one, that is, the ratio for which the absolute average percentage change of

(4) See Tables 14, 15 and 16 (Column 1).

Désaisonnalisation

La désaisonnalisation⁽¹⁾ isole et mesure l'incidence des variations périodiques qui se produisent au cours d'une année en raison de l'évolution normale du climat, des congés fixes et d'autres événements qui se répètent à intervalles réguliers. On rajuste également la série des grands magasins pour tenir compte de la variation du nombre de jours commerciaux. Celle-ci est due au fait qu'un mois donné peut compter, par exemple, cinq samedis une année, mais seulement quatre l'année suivante. Cet ajustement est apporté avant le désaisonnalisation proprement dite, mais il est considéré comme partie intégrante de cette dernière.

La série des grands magasins a été désaisonnalisée au moyen de l'option ARMMI du programme de désaisonnalisation X-11-ARMMI (voir la note donnée plus loin)⁽²⁾. Cette technique consiste à ajouter à la série d'origine une année de données estimatives avant de procéder à la désaisonnalisation proprement dite. Les données estimatives proviennent de prévisions réalisées par des modèles ARMMI ajustés à la série initiale.

La partie X-11 du programme X-11-ARMMI fait surtout appel à la méthode de rapport aux moyennes mobiles pour effectuer le lissage de la série corrigée et obtenir une estimation provisoire de la tendance-cycle, pour calculer les rapports de la série initiale (ajustée) aux estimations de la tendance-cycle et pour estimer les facteurs saiso-nniers à partir de ces rapports. Les facteurs saisonniers définitifs ne sont produits que lorsque ces opérations ont été exécutées à plusieurs reprises⁽³⁾.

Bien que la désaisonnalisation permettre de mieux comprendre la tendance-cycle fondamentale d'une série, la série désaisonnalisée n'en contient pas moins une composante irrégulière. De légères variations d'un mois à l'autre dans la série désaisonnalisée peuvent être de simples mouvements irréguliers; pour avoir une meilleure idée de la tendance fondamentale, les utilisateurs doivent donc examiner les séries désaisonnalisées d'un certain nombre de mois.

À cette fin, ils disposent des mois à dominance cyclique, ou MDC⁽⁴⁾. Il s'agit du plus petit nombre de mois pour lesquels un certain rapport devient et reste inférieur à l'unité; autrement dit, c'est la période pendant laquelle le taux de variation moyen absolu de la tendance-

(1) Voir les tableaux 2, 9 et 13.

(2) Pour plus ample information voir **La méthode de désaisonnalisation X-11-ARMMI**, par Estela Bee Dagum, Statistique Canada, no 12-564F au catalogue, hors série.

(3) Voir les tableaux 14, 15 et 16.

(4) Voir les tableaux 14, 15 et 16 (colonne 1).

the trend-cycle of the seasonally adjusted series becomes greater than the absolute average percent change of the irregular component. The MCD can be interpreted as the number of months over which a change in the seasonally adjusted series must move in a given direction before one can be reasonably certain that the trend-cycle of that series also has moved in the given direction. Clearly small MCD's are desirable and indicative of a smooth series. Applying a moving average to the seasonally adjusted data of MCD length tends to smooth irregular movements which may obscure the underlying trend-cycle. The MCD moving average provides a method of reducing all types of series to approximately the same degree of smoothness, whatever the size of the irregular component in the original series.

Explanatory Notes

The percentage changes in sales shown in this publication are based on the total dollar volume of receipts for each of the periods being compared. These trends include the effect of stores starting operation or ceasing operation and are not limited to identical stores, i.e., those in operation in both of the periods being compared.

The stock-sales ratios(5) are derived by dividing the dollar volume of stocks at selling value at the end of the month by the dollar volume of sales for the month.

The sales-stocks ratios(6) are derived by dividing the dollar volume of the sales for the month by the average of the beginning and ending stocks at selling value for the month.

The metropolitan areas of Montréal, Toronto, Winnipeg and Vancouver are census metropolitan areas as defined by the 1971 Census.

The commodity reference list, which describes in detail the commodities comprising each of the 40 departments noted within, is published in the January issue of this publication.

Revisions to department store sales and stocks are published yearly in the March issue of this publication. Revisions to month-end accounts receivable are published on a monthly basis.

(5) See Table 10.

(6) See Table 11.

cycle de la série désaisonnalisée est supérieur à celui de la composante irrégulièr. Le MDC peut être considéré comme le nombre de mois que doit durer une variation de la série désaisonnalisée dans une direction donnée avant qu'on ne puisse être raisonnablement certain que la tendance-cycle de la série évolue dans la même direction. Ainsi, un MDC peu élevé est souhaitable et indique la présence d'une série lisse. L'application d'une moyenne mobile aux données désaisonnalisées dont la période est égale au MDC tend à lisser les mouvements irréguliers pouvant dissimuler la tendance-cycle fondamentale. La méthode de la moyenne mobile du MDC permet de réduire tous les genres de série à peu près au même niveau de lisage, quelle que soit la taille de la composante irrégulièr dans la série initiale.

Notes explicatives

Les variations des ventes en pourcentage donnée dans la présente publication est fondée sur la valeur totale des recettes pour chacune des périodes observées. Elle tient compte des magasins qui ont ouvert leurs portes et de ceux qui les ont fermées; autrement dit, elle ne se limite pas aux magasins qui ont été exploités dans toutes les périodes en cause.

On obtient les ratios stocks-ventes(5) en divisant la valeur marchande des stocks à la fin du mois par le chiffre des ventes pour le mois.

On obtient les ratios ventes-stocks(6) en divisant le chiffre des ventes pour le mois par la valeur marchande moyenne des stocks en début et en fin de mois.

Les régions métropolitaines de Montréal, de Toronto, de Winnipeg et de Vancouver correspondent aux régions métropolitaines du recensement de 1971.

La liste de référence des marchandises, qui décrit en détail les produits de chacun des 40 rayons présentés dans cette publication est reproduite dans le numéro de janvier.

Les chiffres révisés des ventes et des stocks des grands magasins sont publiés chaque année dans le numéro de mars du présent bulletin. Les révisions aux comptes à recevoir en fin de mois sont apportées mensuellement.

(5) Voir tableau 10.

(6) Voir tableau 11.

Number of shopping days that this publication is based on varies from month to month. See Text Table II for the number of shopping days the current publication is based on.

Le nombre de jours commerciaux sur lesquels sont basés les renseignements présentés ici varie d'un mois à l'autre. Le tableau explicatif II donne le nombre de jours pour la période la plus récente.
